

Joint Pacific Alaska Range Complex

Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska

**Volume III – Public Review of the Draft EIS
(March 30 through July 9, 2012) – Appendices M and N**

Final

June 2013

How to Use This Document

Our goal is to provide a reader-friendly document. The organization of this Final Environmental Impact Statement (Final EIS) is shown below.

Table of Contents, List of Figures, List of Tables, List of Acronyms, and Executive Summary

Chapter 1 Purpose and Need for Joint Pacific Alaska Range Complex (JPARC) Proposed Actions:

Explains the reasons for the proposed enhancements and modernizations and the screening criteria used to select proposals from the *JPARC Master Plan* for this EIS. Also described is the Environmental Impact Analysis Process, the consultation and public involvement processes, a table of where scoping comments are addressed, and a comparative analysis of the anticipated impacts of the proposed actions and alternatives.

Chapter 2 Description of Proposed Action and Alternatives: An overview of the JPARC EIS definitive and programmatic proposed actions and alternatives.

Chapter 3 Affected Environment and Environmental Consequences: Describes the environmental resources and areas that could potentially be affected by each proposed action, analysis methodology and potential impacts.

- Airspace Management and Use
- Noise
- Safety
- Air Quality
- Physical Resources
- Water Resources
- Hazardous Materials and Waste
- Biological Resources
- Cultural Resources
- Land Use
- Infrastructure and Transportation
- Socioeconomics
- Subsistence
- Environmental Justice

Fox 3 MOA Expansion and New Paxson MOA

Realistic Live Ordnance Delivery

Battle Area Complex (BAX) Restricted Area

Expand Restricted Area R-2205, including the Digital Multi-Purpose Training Range (DMPTTR)

Night Joint Training

Unmanned Aerial Vehicle (UAV) Access

Enhanced Ground Maneuver Space

Tanana Flats Training Area (TFTA)
Roadway Access

Joint Air-Ground Integration Complex (JAGIC)

Intermediate Staging Bases (ISBs)

Missile Live Fire for AIM-9 and AIM-120 in the Gulf and Alaska

Joint Precision Airdrop System (JPADS) Drop Zones

Chapter 4 Cumulative Impacts and Secondary Effects: Summarizes the aggregated effects of multiple JPARC proposed actions, as well as the cumulative effects associated with other past, present, and reasonably foreseeable military and civilian actions.

Chapter 5 Other Considerations Required by NEPA: Discussions on short-term use of man's environment in relation to long-term productivity and irreversible or irretrievable commitment of resources.

APPENDICES

Appendix A Public Scoping Summary: Describes the public review process during EIS scoping.

Appendix B Resource Definitions and Regulatory Settings: Provides applicable regulations related to JPARC enhancements.

Appendix C Conflict of Interest Statements: Contains disclosure statements from consulting firms supporting this EIS, stating financial or other interests that might cause a conflict of interest.

Appendices D-J: Technical appendices that include reports and information that support the EIS analyses.

Appendix K Mitigations: A discussion of existing and proposed measures to minimize impacts.

Appendix L Copies of Agency and Government Correspondence: Copies of letters exchanged with government agencies, including consultation, coordination, and cooperating agency correspondence.

Appendix M Draft EIS Review Public Process and Public Hearing Summary: Draft EIS and public hearing notification, informational, and summary materials.

Appendix N Draft EIS Comments and Responses: Copies of Draft EIS public comments and hearing transcripts, plus responses to substantive comments.

APPENDIX M

DRAFT EIS REVIEW PROCESS AND PUBLIC HEARING SUMMARY

M.0 SUMMARY OF DRAFT EIS REVIEW AND PUBLIC COMMENT PROCESS

Alaskan Command (ALCOM) and National Environmental Policy Act (NEPA) objectives for the draft Environmental Impact Statement (EIS) review process included providing the public and government entities a copy of the draft EIS, a forum to learn more about the draft EIS, and ample opportunity to comment on the document. NEPA public notification and public hearing requirements for the draft EIS review process are outlined in 32 Code of Federal regulations (CFR) 989 and in Council on Environmental Quality (CEQ) regulations. Knowing the importance of the Joint Pacific Alaska Range Complex (JPARC) EIS proposals to Alaskan citizens, ALCOM exceeded NEPA notification and review period requirements for the JPARC EIS and associated public hearings.

The draft EIS review process took place from March 30 to July 9, 2012. NEPA requires a minimum 45-day draft EIS review process. For this project, the draft EIS review process lasted just over 100 days. The process included the following steps, which were conducted between March 30 and July 9, 2012:

- Notification of the Availability of the Draft EIS
- Draft EIS Distribution
- Public Hearings
- Opportunities for Comment
- Notification of the Continuation of the Public Review Process for the Draft EIS

Through these notification and public hearing steps, which are explained further below, ALCOM requested the public, agencies, and interested stakeholders to provide oral or written comments on the draft EIS.

M.0.1 Notification of the Availability of the Draft EIS and Draft EIS Distribution

The draft EIS notification process began with the publication of the Notice of Availability (NOA) of the draft EIS in the *Federal Register* on March 30, 2012 (Section [M.1](#)). Additionally, the public was notified of the availability of the draft EIS and the corresponding public hearings in the following ways, with the website, e-mail, and flyer notifications exceeding NEPA requirements. Further details regarding these notification processes are provided below.

- Direct Mailings or E-mail Notifications (Section [M.2](#)) to the project mailing list, March 22 to April 3, 2012
- Project Website (Section [M.3.1](#)), www.jpisceis.com, advertising hearings and accepting comments from March 30, 2012 to July 9, 2012
- Newspaper Display Advertisements (Section [M.3.2](#)) published April 26 to June 14, 2012
- Press Releases (Section [M.3.3](#)) and Public Service Announcements (PSAs, Section [M.3.4](#)), issued April to May 2012 to media venues throughout the region of impact

- Flyers (Section [M.3.5](#)), included in all direct mailings and as attachments to e-mail notifications, requested by ALCOM to be posted in public location, April to May 2012

Every notification provided the dates and locations of the public hearings, avenues for obtaining a copy of the draft EIS, the closing date for the public comment period, the EIS website address, and the ALCOM address and phone number for submitting comments or obtaining additional information. Further details regarding the notification materials are described below.

Direct Mailings or E-mail Notifications (Section [M.2](#)): From March 22 to April 3, 2012, ALCOM distributed letters and/or e-mails to persons and entities on the project mailing list. The project mailing list was established throughout the EIS process. ALCOM originated the mailing list from previous Air Force and Army environmental assessment or environmental impact statement mailing lists and then added agencies and entities ALCOM anticipated to have interest in the JPARC EIS. ALCOM then supplemented the mailing list with entities or citizens expressing interest in the JPARC EIS, commenting at any point throughout the EIS process, and/or attending scoping meetings or public hearings.

The letters and e-mails distributed to the project mailing list provided the dates and locations of the public hearings, avenues for obtaining a copy of the draft EIS, the closing date for the public comment period, and the ALCOM Public Affairs address and phone number. ALCOM distributed letters to all physical mailing addresses on the project mailing list and e-mails to individuals where ALCOM had only an e-mail address in their records.

Included as an attachment to these letters and e-mails was a flyer for posting of dates, times, and locations of the public hearings. ALCOM requested recipients to post the flyers in a public location. Some letters also included copies of the draft EIS and/or the Executive Summary if a copy was specifically requested. The following letters and distributions lists are located in Section [M.2.1](#) through [M.2.7](#).

- Draft EIS Cover Letter – Congressional Delivery and Governor Letters
- Memorandum for Federally Recognized Tribes and Distribution List
- Memorandum for Libraries and Repositories, Organizations, Public Groups, and Government Agencies
- Memorandum for State Historic Preservation Offices and Distribution List
- Memorandum Regarding Endangered Species Act Section 107 and Distribution List
- Memorandum for Interested Individuals Announcing Draft EIS Availability and Public Hearing Dates and Distribution List
- E-mail Announcement for Interested Individuals Announcing Draft EIS Availability and Public Hearing Dates

As part of these direct mailings, ALCOM distributed a hard copy and a compact disc of the draft EIS to the following library repositories throughout the State of Alaska.

- Anchorage Z. J. Loussac UAA Alaska Resources Library and Information Services
- Fairbanks North Star Borough (Noel Wien) Public Library

- Fairbanks Elmer E. Rasmuson Library
- Palmer Public Library
- Copper Valley Community Library
- Alaska Department of Fish and Game in Glennallen
- Paxson Lodge
- Delta Community Library
- Tri-Valley School/Community Library
- Talkeetna Public Library
- Willow Public Library
- Wasilla Public Library

Project Website (Section [M.3.1](#)): The project website was updated by March 30, 2012, with the proposed actions and alternatives, as shown in the draft EIS. The project website advertised the public hearings, included links to the flyer for posting and to the draft EIS for downloading, provided instructions on how to obtain a hard copy of the draft EIS and included a page for visitors to submit comments on the draft EIS.

Newspaper Display Advertisements (Section [M.3.2](#)): Newspaper advertisements were placed in six newspapers located between Anchorage and Fairbanks. These advertisements were published in late March and early April to notify the public of the availability of the draft EIS. A second set of advertisements were published in April, approximately two weeks before the public hearings to provide notification of the dates, times, and locations of those hearings.

Table M-1. Newspaper Advertisement Dates

Newspaper Publishing Newspaper Advertisement	Date of Publication to Advertise Notice of Availability of Draft EIS	Date of Publication to Advertise Public Hearings
<i>Anchorage Daily News</i>	March 30, 2012	April 27, 2012
<i>Chugiak-Eagle River Star</i>	April 5, 2012	April 26, 2012
<i>Copper River Record</i>	April 12, 2012	April 26, 2012
<i>Delta Wind</i>	April 5, 2012	April 26, 2012
<i>Fairbanks Daily News Miner</i>	March 30, 2012	April 30, 2012
<i>Frontiersman</i>	March 30, 2012	April 27, 2012

Press Releases (Section [M.3.3](#)) and Public Service Announcements (PSAs, Section [M.3.4](#)): ALCOM Public Affairs issued press releases between April and May 2012 to media venues throughout the region of impact.

Flyers (Section [M.3.5](#)): ALCOM included flyers in every direct mailing and as attachments to e-mail notifications. ALCOM requested recipients to post the flyers in public locations.

M.0.2 Public Hearings

The Air Force and Army held 11 formal public hearings in 10 locations between Anchorage and Fairbanks, from May 11 through May 23, in the middle of the public draft EIS review period. Pursuant to NEPA and the CEQ regulations, the hearings provided the affected individuals and

groups with enough relevant information to give them better informed perspectives on the proposed actions and alternatives.

Public hearings were held from 5:00 to 9:00 p.m., except in Fairbanks, where meetings were held from 10:00 a.m. to 2:00 p.m. and from 4:00 to 8:00 p.m. Meeting attendees were asked to sign in, and Air Force and Army resource specialists were on hand to provide information and to answer questions on each proposed action and the associated alternatives. Specifically, they explained the necessity of the JPARC proposals, described the proposed alternatives, summarized the NEPA process, and provided a tentative schedule of milestones.

A total of 17 full-color posters exhibiting the proposed actions and alternatives were available for review at each hearing. Through handouts and notification materials, ALCOM clarified that comments should be submitted at the public hearings; to ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, Joint Base Elmendorf-Richardson, Alaska 99506; via phone at 907-552-2341; or via the EIS website at www.jparceis.com. Comment forms were available for participants to provide written comments. During the hearings, ALCOM handed out printed copies of the draft EIS and advised participants that substantive public comments received by the close of the comment period would be responded to in the final EIS and considered during final EIS preparations. ALCOM also advised participants to sign-up to receive a copy of the final EIS either at the sign-in table or on a comment sheet. Following the public hearings, the Air Force added all of the attendees who signed-in, including those who provided verbal testimony or written comments, to the mailing list and recorded which were to receive a copy of the final EIS.

Approximately 45-minutes after the start of each hearing, Air Force and Army representatives provided a presentation to the public explaining the purpose and need for the JPARC. The presentation also went into detail regarding the proposals and the summaries of the environmental impacts for each proposal. Copies of the public hearing materials are contained in Sections [M.4.1](#) through **Error! Reference source not found.** These materials include the sign-in sheet, hearing posters and handouts, and ALCOM's presentation script and slides.

[Table M-2](#) shows the hearing dates and locations, the number of hearing attendees, the number of written comments received, and the numbers of public testimonies received during the hearing. Copies of the official transcripts of the verbal testimony for each hearing are located in Section [M.4.5.1](#) through [M.4.5.10](#).

In addition to the public hearings, Air Force and Army leadership held community briefings in Anchorage, Palmer, Glenallen, Delta Junction, and Healy. [Table M-3](#) shows the meeting dates. Community leaders, JPARC team attendees, and descriptive summaries of the community briefings are provided in Section [M.4.6](#).

Table M-2. Public Hearing Attendees and Number and Types of Comments

Date/Time	Location	Attendees Checking in at Sign-in Table	Written Comments Submitted	Public Testimonies	Persons Testifying

May 14, 2012	Palmer Community Leadership
May 16, 2012	Glennallen Community Leadership
May 18, 2012	Delta Junction Community Leadership
May 21, 2012	Healy Community Leadership

M.0.3 Opportunities for Comment

The Air Force provided the public several opportunities and methods for commenting on the draft EIS during the public hearing and public comment process, including public hearing written comments; public hearing testimony; by mail; via e-mail; via website; by phone; and via fax.

Once the draft EIS public comment period closed, ALCOM reviewed and responded specifically to comments in the final EIS. Appendix N, *Draft EIS Comments and Responses*, contains copies of public and agency comments received during the draft EIS review process and the responses to those comments. It also provides a summary of the number of comments submitted, how they were submitted, and by whom.

M.0.4 Notification of the Continuation of the Public Review Process for the Draft EIS

The closing date for the draft EIS review period was originally June 7, 2012. After receiving comments requesting an extension of the comment period, ALCOM extended the comment period to July 9, 2012, six weeks beyond the original timeline. ALCOM advertised and provided notification of the extension via the following methods:

- Sent out direct letters announcing the comment period extension (Section [M.5.1](#))
- Issued a press release to local media (Section [M.5.2](#))
- Posted a Notice of Continuation in the *Federal Register* (Section [M.5.3](#))
- Issued an e-mail announcement to the project mailing list (Section [M.5.4](#))
- Published public newspaper display advertisements (Section [M.5.5](#))
- Mailed postcards to the project mailing list (Section [M.5.6](#))
- Included flyer for public posting with direct letter and e-mails (Section [M.5.7](#))

Prior to the mailing, the contractor updated the project mailing list with public hearing attendees as well as with commenters. Newspaper display advertisements to announce the extension were placed in the newspapers on the dates shown in [Table M-4](#).

Table M-4. Dates for Newspaper Advertisement of Review Period Continuation

Newspaper	Date of Publication
<i>Anchorage Daily News</i>	June 8, 2012
<i>Chugiak-Eagle River Star</i>	June 14, 2012
<i>Copper River Record</i>	June 14, 2012
<i>Delta Wind</i>	June 14, 2012
<i>Fairbanks Daily News Miner</i>	June 8, 2012
<i>Frontiersman</i>	June 8, 2012

On July 9, 2012, the public comment period closed.

M.1 FEDERAL REGISTER NOTICE OF AVAILABILITY

Federal Register / Vol. 77, No. 62 / Friday, March 30, 2012 / Notices

19281

calculations, and how good is the available data?

- What methods can be used to determine reserve zones?

- (2) *Optimal transmission switching:*

- Simple optimal DC transmission switching appears to represent a potentially solvable technical problem using existing computational resources if transmission operators optimize only a small number of transmission switch positions. It is less clear whether transmission switching model formulations that include realistic representations of reliability requirements are solvable. What is the performance of these more complex model formulations?

- What additional computational impediments, if any, exist to implementing optimal transmission switching over a small number of switches while maintaining reliability?

- What steps toward optimal transmission switching might be taken over the next 5 to 10 years?

- (3) *AC optimal power flow modeling:*

- What is the current state of computational capability with respect to dependably solving AC optimal power flow problems, including analysis of power system reliability?

- Discussions during previous conferences have centered on concerns that current system data quality might not allow for an AC optimal power flow model to be properly formulated and solved. What are the specific data concerns, and what needs to be done to address them?

- What steps toward use of AC optimal power flow modeling might be taken over the next 5 to 10 years?

- (4) *Adaptive and dynamic transmission ratings:*

- Previous presentations examined the use of post-contingency analysis when determining transmission ratings, including consideration of availability of ramping capability. How can (or have) adaptive transmission ratings been implemented?

- Previous presentations also examined how transmission ratings might be updated in real time in response to ambient conditions. How have such dynamic transmission ratings been implemented?

- What are the data or computational challenges associated with implementing adaptive or dynamic transmission ratings?

While the topics suggested above are largely forward-looking, we also encourage proposals for presentations on best practices and other analyses of current operations with respect to these and related topics.

The technical conference will be held in the Commission Meeting Room at the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. All interested participants are invited to attend, and participants with ideas for relevant presentations are invited to nominate themselves to speak at the conference.

Speaker nominations must be submitted on or before April 27, 2012 through the Commission's Web site² by providing the proposed speaker's contact information along with a title, abstract, and list of contributing authors for the proposed presentation. Proposed presentations should be closely related to the topics discussed above. Speakers and presentations will be selected to ensure relevant topics and to accommodate time constraints.

Although registration is not required for general attendance by U.S. citizens, we encourage those planning to attend the conference to register through the Commission's Web site.³ We will provide printed nametags for those who register on or before June 20, 2012.

Due to new security procedures, we strongly encourage attendees who are not citizens of the United States to register for the conference by June 1, 2012, in order to avoid any delay associated with being processed by FERC security.

Following the conferences, a comment date will be set for the filing of post-conference comments.

There is an "eSubscription" link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call 866 208-3676 (toll free). For TTY, call 202 502-8659.

A free webcast of this event will be available through the FERC Web site. Webcast viewers will not be able to participate during the technical conference. Anyone with Internet access interested in viewing the webcast of this conference can do so by navigating to Calendar of Events at www.ferc.gov. The events will contain a link to the webcast. The Capitol Connection provides technical support for the webcasts and offers the option of listening to the conferences via phone-bridge for a fee. If you have any questions, visit

Draft NPDES General Permit for Discharges From the Oil and Gas Extraction Point Source Category to Coastal Waters in Texas (TXG330000)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposal of NPDES General Permit Renewal.

SUMMARY: EPA Region 6 today proposes a National Pollutant Discharge Elimination System (NPDES) general permit regulating discharges from oil and gas wells in the Coastal Subcategory in Texas and in the Stripper Subcategory which discharge into coastal waters in Texas.

DATES: Comments must be received by May 14, 2012.

ADDRESSES: Comments should be sent to: Ms. Diane Smith (6WQ-NP), U.S. Environmental Protection Agency, Region 6, 1445 Ross Avenue, Dallas, Texas 75202-2733.

Comments may also be submitted via EMAIL to the following address: smith.diane@epa.gov.

Public Meeting/Public Hearing Information

A public meeting and a public hearing on the proposed permit will be held at the times and place below. The meeting will include a presentation on the proposed permit followed by the opportunity for questions and answers. The public hearing will be held in accordance with the requirements of 40 CFR 124.12. At the public hearing, any person may submit oral or written

Dear Senator Begich

Alaskan Command is pleased to provide you with a copy of the *Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft EIS (DEIS)*. This document is provided in accordance with the National Environmental Policy Act (NEPA) of 1969. The DEIS describes and analyzes the potential environmental effects associated with the Air Force and Army proposals to modernize and enhance the JPARC in Alaska to best support the military exercises in and near Alaska. JPARC modernizations and enhancements would enable the Army, Navy, Air Force, and Marine Corps in Alaska to train both realistically and jointly, enabling military personnel the best chance of success in their mutually supportive roles in actual combat.

The military currently uses the JPARC to conduct testing, unit-level training, and to support various joint exercises and mission rehearsals. The JPARC was originally developed to support older and in some cases now obsolete weapons and tactics. Its current configuration cannot fully meet the training requirement for military forces and exercises conducted in Alaska. The JPARC requires a more contemporary and versatile design and improved infrastructure to meet the present and future needs of the military. The proposed JPARC modernization and enhancements would enable realistic joint training and testing to support emerging technologies, respond to recent battlefield experiences, and train with tactics and new weapons systems to meet combat and national security needs.

Notification of availability of the Draft EIS is planned for release in the *Federal Register* on March 30, 2012. At that time, the document will be available for download from the website: www.jpisceis.com. Alaskan Command will hold several public hearings on the Draft EIS throughout the region of influence from May 11 through 23, 2012. Specific hearing dates, times, and locations are on the enclosed flyer and will be announced through local and regional media.

Public and agency comments received by Alaskan Command throughout the environmental process were considered in the preparation of the Draft EIS. To ensure sufficient time to consider public input in preparation of the Final EIS, we are requesting that comments be

M.2.2 Memorandum for Federally Recognized Tribes and Distribution List

HEADQUARTERS
ALASKAN COMMAND (ALCOM)
JOINT BASE ELMENDORF-RICHARDSON, ALASKA 99506

March 30, 2012

MEMORANDUM FOR FEDERALLY RECOGNIZED TRIBES

FROM: Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBER, AK 99506-2101

SUBJECT: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)*

1. We are pleased to provide you with a copy of the *JPARC Modernization and Enhancement Draft EIS*. The document is also available from the following website: www.jpisceis.com. This document is provided in accordance with the National Environmental Policy Act (NEPA) of 1969 and the Department of Defense American Indian/Alaska Native Policy.

2. The purpose of this correspondence is follow up to formal government-to-government consultation held in February 2011, as well as support for consultation recently offered under Section 106 of the National Historic Preservation Act of 1966 (as amended). The Draft EIS was developed in consideration of the results of the aforementioned consultation as well as the public and agency comments received during the public scoping process. Many of the concerns (see appendix A.4.2) expressed during formal consultation are addressed in this document. For instance, proposed airspace usage was moved, as requested, further north of the Glenn Highway than originally proposed. A comparative summary of the environmental consequences of the proposals is presented at the end of Chapter 1 of the Draft EIS.

3. As a Federally recognized tribe please contact our Native Affairs/Natural Resources Advisor, Dr. Jerome Montague, at jerome.montague@elmendorf.af.mil or (907) 552-2769 to discuss how your concerns, raised during formal consultation, of potential impacts on tribal rights, tribal resources, or Indian land due to JPARC proposals are addressed in the Draft EIS. Please contact Erin Marynak at erin.marynak.ctr@elmendorf.af.mil or (907) 552-3791 to initiate section 106 consultation over concerns you may have about the potential effects of the proposal on significant cultural and/or historic resources. The mailing address for both these individuals is Alaskan Command (ALCOM), 9480 Pease Avenue, JBER, AK 99506-2101.

4. You and other tribal members are encouraged to participate in the public comment process. ALCOM will hold several public hearings on the Draft EIS throughout the region from May 11 through 23, 2012. Specific hearing dates, times, and locations will be announced through local and regional media, and are included in the enclosed flyer. Please post this flyer in a public location to assist us in providing notice about the availability of the Draft EIS for public review.

Guardian of the North

5. All written comments through the public process should be addressed to:

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506-2101

6. Comments will be accepted through June 7, 2012. Comments may be submitted at the public hearings, via the internet at <http://www.jparceis.com>, via fax at (907) 552-5411, or by e-mail to alcom.j08@elmendorf.af.mil.

7. For additional information, please contact ALCOM Public Affairs at (907) 552-2341.

MEMORANDUM FOR ANCSA CORPORATIONS

FROM: Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBER, AK 99506-2101

SUBJECT: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)*

1. We are pleased to provide you with a copy of the *JPARC Modernization and Enhancement Draft EIS*. The document is also available from the following website: www.jparceis.com. This document is provided in accordance with the National Environmental Policy Act (NEPA) of 1969 Section 106 of the National Historic Preservation Act of 1966 (as amended).

2. The purpose of this correspondence is to offer consultation if your corporation determines that the proposed action may affect corporate lands as well as supporting documentation for Section 106 consultation recently offered. The Draft EIS was developed in consideration of public, tribal and agency comments received during the public scoping process. As an Alaska Native Corporation please contact our Native Affairs/Natural Resources Advisor, Dr. Jerome Montague, at jerome.montague@elmendorf.af.mil or (907) 552-2769, to discuss your concerns of potential impacts on corporate land due to JPARC proposals described in the Draft EIS. Please contact Ms. Erin Marynak at erin.marynak.ctr@elmendorf.af.mil or (907) 552-3791, to initiate Section 106 consultation over concerns you may have about the potential effects of the proposal on significant cultural and/or historic resources. The mailing address for both of these individuals is Alaskan Command (ALCOM), 9480 Pease Avenue, JBER, AK 99506-2101.

3. You and other employees and shareholders are encouraged to participate in the public comment process. ALCOM will hold several public hearings on the Draft EIS throughout the region from May 11 through 23, 2012. Specific hearing dates, times, and locations will be announced through local and regional media, and are included in the enclosed flyer. Please post this flyer in a public location to assist us in providing notice about the availability of the Draft EIS for public review.

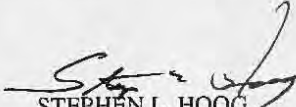

4. All written comments through the public process should be addressed to:

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506-2101

Guardian of the North

5. Comments will be accepted through June 7, 2012. Comments may be submitted at the public hearings, via the internet at <http://www.jparceis.com>, by fax at (907) 552-5411, or by e-mail to alcom.i08@elmendorf.af.mil.

6. For additional information, please contact ALCOM Public Affairs at (907) 552-2341.

M.2.4 Memorandum for State Historic Preservation Offices and Distribution List

HEADQUARTERS
ALASKAN COMMAND (ALCOM)
JOINT BASE ELMENDORF-RICHARDSON, ALASKA 99506

March 30, 2012

MEMORANDUM FOR STATE HISTORIC PRESERVATION OFFICERS

FROM: Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBER, AK 99506-2101

SUBJECT: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)*

1. We are pleased to provide you with a copy of the *JPARC Modernization and Enhancement Draft EIS*. This document is provided in accordance with the National Environmental Policy Act (NEPA) of 1969, as amended (42 United States Code [U.S.C.] 4321 *et seq.*); the Council on Environmental Quality (CEQ) Regulations for Implementing the Procedural Provisions of NEPA (40 Code of Federal Regulations [CFR] 1500–1508); Executive Orders 11514 and 11991; the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*); the Environmental Analysis of Army Actions (32 CFR 651); and the Air Force Environmental Impact Analysis Process (32 CFR 989).
2. The Draft EIS supplements the documentation previously submitted in our Section 106 consultation correspondence of January 11, 2012 (File No. 3130-IR AIRFORCE) and February 7, 2012, in compliance with Section 106 of the NHPA and 36 CFR Part 800, Protection of Historic Properties. We would appreciate your identifying any additional concerns you may have about the potential effects of the proposal on significant historic resources within the state of Alaska.
3. As a result of public and agency comments received during the public scoping process, the Draft EIS was developed with those comments in mind. A summary of the proposed actions and alternatives is detailed in Chapter 2, and a comparative summary of environmental consequences is provided at the end of Chapter 1 of the Draft EIS. Notification of the availability of the Draft will appear in the *Federal Register* on March 30, 2012.
4. Alaskan Command (ALCOM) will hold several public hearings on the Draft EIS throughout the state of Alaska from May 11 through 23, 2012. Specific hearing dates, times, and locations will be announced through local and regional media, and are included in the enclosed flyer. Please post this flyer in a public location to assist us in providing notice about the availability of the Draft EIS for public review.
5. Our plan to involve the public follows established Air Force and Army procedures for completing the NEPA process and will fulfill our responsibilities under 36 CFR 800.3(e).

Guardian of the North

6. Comments may be submitted at the public hearings or in writing to <http://www.jparceis.com>, by e-mail to alcom.i08@elmendorf.af.mil, by fax at (907) 552-5411, or sent to the address below. Comments must be postmarked or received by June 7, 2012.

SUBJECT: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)*

1. We are pleased to provide you with a copy of the *JPARC Modernization and Enhancement Draft EIS*. This document is provided in accordance with the National Environmental Policy Act (NEPA) of 1969, as amended (42 United States Code [U.S.C.] 4321 *et seq.*); the Council on Environmental Quality (CEQ) Regulations for Implementing the Procedural Provisions of NEPA (40 Code of Federal Regulations [CFR] 1500–1508); Executive Orders 11514 and 11991; the Environmental Quality Improvement Act of 1970, as amended (42 U.S.C. 4371 *et seq.*); the Environmental Analysis of Army Actions (32 CFR 651); and the Air Force Environmental Impact Analysis Process (32 CFR 989).
2. As a result of public and agency comments received during the public scoping process, the Draft EIS was developed with those comments in mind. A summary of the proposed actions and alternatives is detailed in Chapter 2, and a comparative summary of environmental consequences is provided at the end of Chapter 1 of the Draft EIS. The Draft EIS addresses six definitive projects and six programmatic projects. The definitive projects are located in interior Alaska areas where endangered or threatened species are not known to occur. Of the six programmatic projects, which would require additional design and subsequent NEPA analysis before they could be implemented, one (Missile Live Fire for AIM-9 and AIM-120 in the Gulf of Alaska) is proposed for an area that supports a listed endangered and threatened species, including marine mammals. Programmatic analysis for this project can be found in Section 3.11 of the attached Draft EIS. The remaining five programmatic projects take place in the same areas as the definitive projects where endangered or threatened species are not known to occur.
3. ALCOM will hold several public hearings on the Draft EIS throughout the state of Alaska from May 11 through 23, 2012. Specific hearing dates, times, and locations will be announced through local and regional media, and are included in the enclosed flyer. Please post this flyer in a public location to assist us in providing notice about the availability of the Draft EIS for public review.

Guardian of the North

4. Comments may be submitted at the public hearings or in writing to <http://www.jparceis.com>, by e-mailed to alcom.i08@elmendorf.af.mil, by fax at (907) 552-5411, or at the address below. Comments must be postmarked or received by June 7, 2012.

MEMORANDUM FOR INTERESTED INDIVIDUALS

FROM: Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBER, AK 99506-2101

SUBJECT: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)*

1. We are pleased to announce the *JPARC Modernization and Enhancement Draft EIS* is available for review and public comment. Alaskan Command (ALCOM) will hold several public hearings on the Draft EIS throughout the region of influence from May 11 through 23, 2012. Specific hearing dates, times, and locations are included in the enclosed flyer. Please post this flyer in a public location to assist us in providing notice about the availability of the Draft EIS for public review.

2. Comments may be submitted at the public hearings or in writing to <http://www.jparceis.com>, by e-mail to alcom.j08@elmendorf.af.mil, by fax at (907) 552-5411, or sent to the address below. Comments must be postmarked or received by June 7, 2012.

Attachments to E-mail Announcement

Draft EIS published March 30, comments accepted through June 7

The Joint Pacific Alaska Range Complex (JPARC) consists of all land, air, and sea training areas used by the Army, Air Force, Navy and Marine Corps in Alaska to support military exercises. The proposed JPARC enhancements would:

- Enable realistic training and testing to support new technologies
- Respond to recent battlefield experiences
- Enable the military to train with new weapons systems and tactics so military personnel can succeed in actual combat

The National Environmental Policy Act requires the Army and Air Force to analyze potential environmental consequences associated with expanding or establishing new Military Operations Areas, restricted airspace, airspace corridors, ground maneuver training areas, and training complexes. The Environmental Impact Statement (EIS) addresses action alternatives as well

as no action alternatives, in which the military would not implement any new proposals and would continue with current training limitations. A copy of the Draft EIS is available to download from www.jparcheis.com. You may also request a digital copy from Alaskan Command (ALCOM) Public Affairs or view a paper copy at the following libraries and locations: Anchorage Z. J. Loussac; UAA Alaska Resources Library and Information Services; Fairbanks North Star Borough (Noel Wien); Fairbanks Elmer E. Rasmuson Library; Palmer Public Library; Copper Valley Community Library; Alaska Department of Fish and Game in Glennallen; Paxson Lodge; Delta Community Library; Tri-Valley School/Community Library; Talkeetna Public Library; and Wasilla Public Library.

Comments from the public will be considered before any final

decision is made. ALCOM will host public hearings to provide an opportunity to learn about the proposals and provide input. The schedule and locations of the hearings are on page 2. Oral and written comments presented at the hearings, as well as written comments received by ALCOM during the public comment period, will be considered in the Final EIS.

To ensure sufficient time to include public input in the Final EIS, written comments should be submitted to ALCOM Public Affairs by June 7, 2012.

Please direct any written comments or requests for information to:

**ALCOM Public Affairs
9480 Pease Avenue, Suite 120

Commander wants to hear your feedback

As we near the next milestone in the modernization of the Joint Pacific Alaska Range Complex (JPARC), I'd like to share a little bit about the road up to this point.

We have taken your concerns and comments received during the Public Scoping process into consideration and look forward to sharing with you the updates that have been made to the proposals. While this newsletter contains a preview of some of the updates, we invite you to review a copy of the Draft Environmental Impact Statement. Details on where you can obtain a copy as well as our schedule for public hearings and details for voicing your concerns are included in this issue. Please take advantage of these opportunities to voice your perspective.

We continue to remain on schedule with our timeline, but I'd like to take a minute to thank you for your patience and cooperation as we continue this process. We at Alaskan Command are committed to conducting a thorough analysis of projected effects from modernization of the JPARC.

Since my family and I arrived and I took command in November, we have received a gracious welcome from the people of Alaska. Through more than 30 years in the Air Force, I have never seen a community more supportive than that which I have experienced here. I look forward to working with you to continue our efforts to enhance military training opportunities, while preserving the natural beauty and wildlife of Alaska that we all enjoy.

Sincerely,
Lt. Gen. Steve Hoog
Commander, Alaskan Command

Public Hearing Schedule

5:00—9:00 p.m. with a presentation beginning at 5:45 p.m. except where noted*

Friday, May 11

University of Alaska-Anchorage, Lucy Cuddy Hall
2921 Spirit Way, Anchorage

Monday, May 14

Palmer Community Center (The Railroad Depot)
610 S. Valley Way, Palmer

Tuesday, May 15

Lake Louise Lodge
Mile 16.1 Lake Louise Road, Glennallen

Wednesday, May 16

Caribou Hotel, Mile 186.5 Glenn Hwy, Glennallen

Thursday, May 17

Paxson Lodge, Mile 185.5 Richardson Hwy, Paxson

Friday, May 18

Alaska Steakhouse and Motel, Mile 265 Richardson Hwy
Delta Junction

Saturday, May 19

*Hearings from 10:00 a.m.-2:00 p.m. & 4:00-8:00 p.m.
with presentations at 10:45 a.m. & 4:45 p.m.

University of Alaska Fairbanks, William R. Wood Center
multi-level lounge, 505 S. Chandler Drive, Fairbanks

Monday, May 21

Tri-Valley Community Center, 1 Healy Spur Rd, Healy

Tuesday, May 22

Swiss Alaska Inn, 22056 South F Street, Talkeetna

Wednesday, May 23

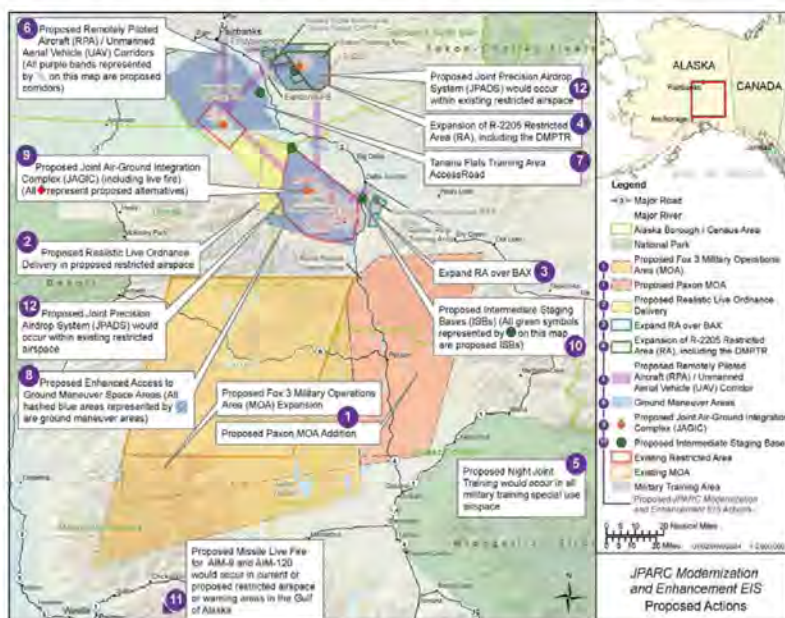

Menard Sports Center, 1001 S. Mack Drive, Wasilla

What happened to your scoping comments?

Over the last year, representatives from Alaskan Command and the EIS proponents have been meeting internally and externally with government agencies to discuss and modify the proposals in the JPARC EIS to further address military requirements as well as comments collected during the public scoping process.

Since the public scoping process and the last JPARC newsletter, the JPARC EIS proposals are now described as twelve proposed actions instead of ten to simplify the environmental analysis. Additionally, some alternatives have been removed, changed, added to, or replaced as noted below.

1. A new Alternative E is described under Proposed Fox 3 MOA Expansion and New Paxon MOA. The new Alternative moves the originally proposed Alternative A Fox MOA southern boundary about 20 miles to the North and addresses some of the major public and agency concerns regarding airspace management and potential impacts to the Lake Louise area.

2. Alternatives A and B under *Proposal 2: Proposed Realistic Live Ordnance Delivery* describe two inert ordnance target areas, that when solely utilized, would maintain all hazard areas or danger zones entirely on military lands.

3. *Proposal 3: Battle Area Complex Restricted Area Addition (arising from the breakout of the Proposed Joint Combined Arms Live Fire [JCALF] Proposal)* has a new Alternative B, which proposes to expand the restricted airspace to include airspace over the military's Combined Arms Collective Training Facility (CACTF) as well as the CACTF Controlled Firing Area (CFA) – both on military lands.

(See Comments...on page 3)

(Comments, Continued from page 2)

4. *Proposal 4: Expand R-2205 Restricted Area, including the Digital Multi-Purpose Training Range (DMPTR)* (arising from the breakout of the *Proposed JCALF Proposal*) proposes to add restricted airspace over military lands to the west, and excludes restricted airspace originally proposed in Alternative A that extended over non-military lands.

5. *Proposal 5: Proposed Night Joint Training* now includes Air Force night weapons employment and lights-out capabilities, which are capabilities currently utilized by the Army.

6. To-scale maps have been developed for *Proposal 6: Proposed Remotely Piloted Aircraft (RPA)/Unmanned Aerial Vehicle (UAV) Access*.

The six proposals listed below have incurred no significant changes, except separating the Enhanced Ground Maneuver Space proposal from the Road Access to Tanana Flats Training Area (TFTA) proposal to simplify analyses. These proposals are less developed than the definitive proposals listed above and are designated as programmatic. The 2013 Record of Decision will not address these proposals, but inclusion now allows the military to obtain additional public input before developing alternatives. These proposals will need to go through a separate EIS process once more specific plans and alternatives are developed.

Proposal 7: Proposed Enhanced Access to Ground Maneuver Space

Proposal 8: Proposed Tanana Flats Training Area (TFTA) Access Road

Proposal 9: Proposed Joint Air-Ground Integration Complex (JAGIC)

Proposal 10: Proposed Intermediate Staging Bases (ISBs)

Proposal 11: Proposed Missile Live Fire for AIM-9X and AIM-120 in the Gulf of Alaska

Proposal 12: Proposed Joint Precision Airdrop System (JPADS) Drop Zones

Public involvement during the EIS process

As outlined in the National Environmental Policy Act (NEPA) guidelines, the next major step in the Environmental Impact Statement (EIS) process is the Draft EIS public comment period. This step began when the Environmental Protection Agency (EPA) published a Notice of Availability in the Federal Register, and at www.epa.gov/compliance/nepaieisdata.html, informing the public the draft is available for comment. With publication, there will be a minimum 45-day public comment period.

During this time, Alaskan Command will conduct public hearings as a way to solicit comments. We will also request comments from other Federal, State, and local agencies which may have jurisdiction or interest in these proposals.

When the public comment period is finished, Alaskan Command will analyze or respond to comments, conduct further analysis on the proposals as necessary, and prepare the final EIS. In the final EIS we will analyze the substantive comments received from other government agencies and from you and other members of the public.

Because of the continuous analysis and consideration of public comments, we encourage you to stay involved throughout the process. Please take the opportunity to review the draft EIS and provide your comments and input through one of many avenues made available, whether it is at a public hearing, online or via the mail. Regardless of how they are submitted all comments will be given the same consideration as we seek to find the "win-win" for all parties involved.

The EIS Timeline

Opportunities for Public Involvement

Are you Special Use Airspace savvy?

When it comes to Special Use Airspace (SUA), pilots can easily confuse one type of SUA with the other, or when in doubt, treat them all the same. Not knowing and understanding the SUA located within your route of flight can not only hinder your flight planning, it can be dangerous. By using the Special Use Airspace Information Service (SUAIS) here in Alaska, navigating SUA can be an enjoyable experience. Let's take a look at a few types you will most likely encounter when flying in Alaska:

Military Operations Areas (MOAs); activity within a MOA is considered "non-hazardous" in nature since no munitions are being released from military weapon systems. This airspace separates high-speed, maneuvering military traffic from Instrument Flight Rules (IFR) traffic. These areas are identified on aviation charts by a defined area marked with "MOA," preceded by the MOA's name i.e. "EIELSON MOA". MOA altitudes differ for each individual area and can be determined by consulting the sectional chart's legend (you may be able to fly under or over a MOA). Although Visual Flight Rules (VFR) pilots are not prohibited from entering MOAs, they are cautioned to keep a watchful eye out for military operations such as aerial refueling, air combat training, acrobatics, and formation flying. At night, lights-out training may be conducted in the MOAs. During lights-out training, military pilots fly with the aid of night-vision goggles (NVGs) and all exterior aircraft lighting is turned off. While General Aviation (GA) aircraft are still permitted to fly in these MOAs, pilots should be sure to contact the controlling agency for traffic advisories. A Notice to Airmen (NOTAM) will be published at

least 48 hours in advance prior to "lights-out training" within a MOA. Alaska has ten MOA complexes currently used for lights-out training: Birch, Buffalo, Delta, Eielson, Fox, Galena, Naknek, Stony, Susitna, and Yukon MOAs.

Restricted Areas (RAs); Restricted areas contain hazardous activity that do not mix well with general aviation; activities such as artillery firing and releasing munitions from aircraft. Unauthorized entry into a restricted area is not only illegal, but can be extremely dangerous. Restricted areas are identified on aeronautical charts by a defined area and labeled with the letter "R," followed by a number, i.e. "R-2211". Times of use, altitudes, and controlling agency are identified in the Sectional Chart's legend. Use this information to contact the controlling agency and request the restricted area's status: hot or cold. Hot means the restricted area is active, and hazardous activity is taking place. Cold means the airspace is now Class E – and flight through is permitted. In the "times of use" section of the legend, it may list a time block. This does not necessarily mean the restricted area is hot for this entire time. Contact the controlling agency to determine the RA current status, and you may be able to fly through, instead of around. For R2202, R-2205, and R-2211, contact Eielson Range Control on SUAIS frequency (VHF 125.3) or via telephone at 1-800-758-8723 to determine status. Restricted Areas can be active outside the times listed on the chart when NOTAM'd – Again, contact the controlling agency to determine status.

Military training routes (MTRs); low altitude, high-speed routes for military aircraft. They are depicted on sectional charts and are of two types:

IR (IFR) and VR (VFR). Routes without a segment above 1,500 feet AGL are charted with a four-number identifier, and routes with at least one segment above 1,500 feet AGL are charted with a three-number identifier. One thing to keep in mind when trying to de-conflict yourself from military aircraft established on one of these routes, is that aircraft may be up to 5 miles on either side of the charted line—this means these routes are 10 miles wide. Also, military aircraft are not confined to MTRs, MOAs, and restricted areas. Military aircraft may be encountered anywhere civil traffic flies but when outside of specially designated airspace, they must adhere to Federal Aviation Regulations.

Special Use Airspace Information Service (SUAIS) in Alaska; SUAIS is a 24-hour service provided to civilian pilots. The SUAIS's primary function is to provide civilian pilots with information regarding Air Force flight operations in the MOAs and Restricted Areas within central Alaska, so they may better plan their flights through and around the SUA. The service provides "near-real time" information on Air Force flight activity in the Fairbanks and Delta Junction areas. SUAIS also provides information on Army artillery firing and known helicopter operations. If you are not using this service, you are depriving yourself of information that will enhance flight planning and most of all, safety!

Additional information can be found on the 11th Air Force airspace page located at: www.jber.af.mil/11af/alaskaspaceinfo/

The FAA SUA web site also shows active and scheduled Special Use Airspace—<http://sua.faa.gov>

Welcome to the JPARC Modernization and Enhancement EIS Website »

Announcement: The public comment period on the Draft EIS has been extended to July 9, 2012. Click [here](#) for ALCOM's announcement of the extension. The Draft EIS was released for public review and comment on March 30, 2012. PDF files are available for download for the JPARC Draft EIS [Volume I](#) and [Volume II](#). This website was last updated on May 31, 2012.

The purpose of this website is to inform the public and others about the *Environmental Impact Statement (EIS)* for the *Modernization and Enhancement of Ranges, Airspace, and Training Areas in the JPARC in Alaska (JPARC Modernization and Enhancement EIS)*. Currently, the JPARC consists of all land, air, and sea training areas used by the Army, Navy, and Air Force in Alaska to support joint exercises and mission rehearsals.

The proposed JPARC enhancements and expansions would do the following:

- Enable realistic joint training and testing to support emerging technologies,
- Respond to recent battlefield experiences, and
- Enable the Services to train with tactics and new weapons systems to meet combat and national security needs so military personnel can succeed in their mutually supportive combat roles.

Pursuant to the National Environmental Policy Act (NEPA), the *JPARC Modernization and Enhancement EIS* analyzes potential environmental consequences associated with modernizing or enhancing new or expanded military operations areas, restricted airspace, airspace corridors, ground maneuver training areas, and training complexes. The EIS will address action alternatives, as well as no action alternatives, in which the military would not implement any new proposals and would continue with current baseline training exercises.

The Draft EIS has been released for public review and comment on March 30, 2012. The Draft EIS includes agency expertise and comments by the public during the scoping process and it contains a description of the affected environment, a reasonable range of alternatives for each proposed action, and an analysis of the impacts of each proposed action alternative, including the no action alternative.

How Can I Get Involved?

The Draft EIS has been released to the public as of March 30, 2012. The public now has the opportunity to submit written, oral, and electronic comments on the Draft EIS through this website or via mail to ALCOM Public Affairs through July 9, 2012. Public participation is an integral part of the NEPA process and we appreciate your involvement.

The public has an important role in the NEPA process by commenting on the findings in the *JPARC Modernization and Enhancement DEIS*. The public can participate in the NEPA process by attending the public hearings and by submitting comments to the ALCOM Public Affairs office. The Army and the Air Force, in coordination with ALCOM, will take into consideration all comments received from the public, agencies, and other interested stakeholders.

For more information regarding public involvement, please be sure to visit the [Get Involved](#) page.

Proposed Actions »

Currently, Alaska's military assets include air, land, and sea areas to replicate realistic conditions for training and testing of combat systems. However, expanded weapons and sensor capabilities, expanded mobility, and improved communications have all driven the need for larger training areas. To address this need, the Army and Air Force undertook a rigorous screening and evaluation process to identify actions and projects in the *JPARC Modernization and Enhancement EIS* shown below.

Generally, the proposals involve expanding and/or establishing new Military Operations Areas, restricted airspace, airspace corridors, expanding access to training areas, and developing new ranges and facilities to provide adequate resources to conduct training and testing under realistic and varied conditions.

 **The graphic below represents a summary of *JPARC Modernization and Enhancement EIS* Proposed Actions. Click on a numeric indicator to view detailed proposal action document or alternatively use the links below.**

Joint Training »

The U.S. Department of Defense (DoD) continues to face exceptional challenge to meet increasingly urgent national security needs. The overall purpose of the proposed actions in the *JPARC Modernization and Enhancement EIS* is to enhance and modernize the capabilities of the JPARC to meet the needs of the military units within the State of Alaska more effectively. These proposed modernizations and enhancements to the JPARC are required because of:

- Significant advances in warfighting technology
- Advances in combat tactics and lessons learned from combat
- The need for realistic, yet efficient training
- Requirements for the military to train to operate jointly

Each of these challenges drives the need for continued enhancements to range and airspace infrastructure to more accurately replicate the modern battlefield. The JPARC would provide the critical future training and testing required in a manner that maximizes modern battlespace realism.

Alaska provides a unique backdrop with an uncluttered electromagnetic environment, minimal encroachment, and a strategic location within the United States. The expanse and availability of military ranges, training land, and airspace would allow Service members to train jointly from individual skills up to complex, interrelated tasks.

➔ **Developing the JPARC would build on a firm foundation of extensive training, decades of testing, and range infrastructure already in place in Alaska. Future investments would come from the individual Services - Army, Navy, and Air Force - that would jointly benefit from these capabilities.**

Resource Areas »

This environmental impact statement (EIS) will evaluate the potential environmental impacts from the JPARC proposed action and alternatives in addition to a No Action Alternative. The anticipated environmental resource areas to be studied in the draft EIS include the following

- **Airspace Operations** - Airspace, Noise, Air Quality, and Safety (Ground and Air).
- **Natural Resources** - Geology, Soils, Water, and Biological Resources
- **Cultural Resources** - Cultural, Alaska Native, and Subsistence Resources
- **Human Resources** - Land Use, Recreation and Visual Resources, Socioeconomics, Environmental Justice, and Risks to Children
- **Community Infrastructure** - Public Services, Hazardous Materials and Waste, and Transportation

JPARC EIS »

The National Environmental Policy Act (NEPA) is our national mandate for making informed decisions while considering environmental impacts. When federal agencies propose projects having the potential to significantly impact the environment, NEPA requires the following process be undertaken as part of the planning process before final decisions are made:

- Evaluation and consideration of potential environmental consequences for proposals that may significantly impact the environment
- Consideration of public and government agency comment

Where the potential for significant environmental impacts exists, this evaluation is presented in an environmental impact statement (EIS), which:

- Identifies and describes the affected environment
- Evaluates the potential environmental consequences from a range of reasonable alternatives
- Identifies environmental permits and specific mitigation measures to avoid, minimize, or reduce environmental impacts if required

The Draft EIS was filed with the U.S. Environmental Protection Agency and made available to interested parties. The Notice of Availability (NOA) of the Draft EIS was published in the Congressional Federal Register (CFR) and local newspapers on March 30, 2012 to inform public agencies and the public that the document is available for review.

The screenshot shows the JPARC EIS website. The header features a banner with the JPARC logo and the title "Joint Pacific Alaska Range Complex Modernization and Enhancement Environmental Impact Statement". Below the banner is a navigation menu with links: HOME, PROPOSED ACTIONS, JOINT TRAINING, RESOURCE AREAS, EIS, MORE INFORMATION, GET INVOLVED, and COMMENT. The main content area is divided into two columns. The left column contains links for Public Comments (Submit, View), Documentation (JPARC DEIS Vol I, JPARC DEIS Vol II, Spring 2012 ALCOM Newsletter), What's New (Draft EIS Public Comment Period Extended), Contact (Please direct any comments, or requests for information to: ALCOM Public Affairs, 9490 Pease Avenue, Suite 120, JBER, AK 99506, 907-552-2341, alcom.08@ehdndorf.af.mil), User Community (Join Mailing List), and My Profile (My Profile). The right column is titled "JPARC EIS What's New" and contains three news items: "Draft EIS Public Comment Period Extended" (05/31/2012), "Public Hearing Dates and Locations" (04/19/2012), and "The Draft EIS is available for review and comment" (03/30/2012). Each item includes a brief description and a link to more information. At the bottom of the page, there are links for "Website Support" and "Top".

■ **Draft EIS Public Comment Period Extended** (05/31/2012)
The public comment period on the Draft EIS has been extended to July 9, 2012. Please print and post this [flyer](#) in a public location to get the word out regarding the extension. The Draft EIS was released for public review and comment on March 30, 2012. PDF files are available for download for the JPARC Draft EIS [Volume I](#) and [Volume II](#). This website was last updated on May 31, 2012.

■ **Public Hearing Dates and Locations** (04/19/2012)
Public Hearings on the Draft EIS will be held May 11 through May 23, 2012. Click [here](#) for our flyer advertising the hearings.

■ **The Draft EIS is available for review and comment** (03/30/2012)
The Draft EIS has been released for public distribution. PDF files are available for download for the JPARC DEIS [Volume I](#) and [Volume II](#). Click [here](#) to submit a comment on this website.

Frequently Asked Questions »

■ **What is the Joint Pacific Alaska Range Complex, or JPARC?**

JPARC is the training capability in Alaska that integrates land, sea, air, space and even cyberspace components into a venue that involves every branch of the military –Army, Navy, Marines, Air Force, Coast Guard and Special Forces. JPARC is a critical national asset.

■ **Doesn't the military have enough land in Alaska for training? Why does the military need more?**

The military currently maintains exclusive use of 2,500 square miles of land for ground training activities and exercises within JPARC. Under the JPARC Modernization and Enhancement EIS, the military proposes to conduct joint and increased training activities on the lands used by the Army and Air Force within existing JPARC military boundaries. The Department of Defense (DOD) is not planning to request additional land to be formally withdrawn for exclusive military use as part of the current JPARC proposals. The military may, however, request the use of non-military land for buffer areas from other land holders, such as the State of Alaska, the federal Bureau of Land Management (BLM) and possibly private holdings. Such use requests would require coordination, approvals, legal documentation, possible restrictions, and regulatory processes to be undertaken with the specific land holders.

The military is proposing to increase the amount of airspace, to include both Restricted Areas and Military Operations Areas (MOAs) in which they currently train, which is dependent on the actual airspace alternatives selected. When active, a MOA does not restrict general aviation like a Restricted Area. Annual and daily use of this airspace would vary with the location and proposed use of each area. For instance, it is proposed that the Paxson MOA would only be used for Major Flying Exercises (MFE) no more than 60 days a year with two 1.5 to 2.5 hour time periods daily. Additionally, some of the proposed airspace, such as the Fox 3 MOA expansion would be subdivided such that military training activities would be confined to only those subdivisions that are needed to support the different mission types to be conducted. The Army and Air Force are committed to working with the civil aviation community to help ensure that Alaska airspace can be safely and effectively used to the greatest extent possible by all aviation interests.

■ **Will pilot access to airspace be limited under the proposals?**

The military recognizes the importance of access to airspace in Alaska and of the way Alaskans use airspace to make a living and recreate. The JPARC proposals include some increased use of airspace. However, the proposals are not intended to become full-time use. The military is proposing to increase its airspace training area depending on the actual airspace alternatives selected. Air Force flight training would occur during specified times of the year and select time periods during the day, whereas the Army's use of the Restricted Areas may be more continuous on those days this airspace is activated. Additionally, the proposed airspace training areas would be segmented so that while some airspace would be restricted during military airspace training activities, other nearby designated airspace would be open for general aviation. The Army and Air Force are committed to working with the aviation community to assure that both the public and the military can get their jobs done in a safe environment.

■ **What impact will the JPARC proposals have on the environment?**

This is an important question which will be researched, analyzed and evaluated in the upcoming environmental impact statement. Over the next year, specific technical research and analysis will be conducted to assess the effect of the various proposals on the human, natural and cultural environment.

■ **What can I expect at a Public Hearing?**

Public hearings are an important part of the NEPA process during the preparation of an EIS. They are held after the Draft EIS has been completed, approved, and the Notice of Availability (NOA) that the Draft EIS has been released for

public review has been published in Congressional Federal Register (CFR). The NOA for the *JPARC Modernization and Enhancement Draft EIS* was published in the CFR on March 30, 2012.

The purpose of holding a Public Hearing during the Draft EIS review period is to obtain input and comment from the public, in accordance with their review of the Draft EIS. The key elements of a Public Hearing include the following:

- At the start of a Public Hearing for the *JPARC Modernization and Enhancement Draft EIS*, the Army and Air Force will provide materials such as brochures and posters for the public to review.
- Army and Air Force subject matter experts will be available to answer questions members of the public may have prior to beginning of the Public Hearing.
- The Public Hearing will begin with a presentation by members of the Army, Air Force and ALCOM. They will briefly describe the NEPA process for the public, present information about the Draft EIS, the proposed actions and alternatives, key findings, and important resource areas studied, describe the process by which the public can become involved in the *JPARC Modernization and Enhancement Draft EIS* process, and how the public can provide comments on the Draft EIS.
- The Public Hearing is then opened for the members of the public to provide oral comments on the *JPARC Modernization and Enhancement Draft EIS*. All oral comments will be transcribed by a court reporter for input into the preparation of the Final EIS.
- For members of the public who do not wish to provide oral comments, a court reporter will be available to transcribe oral comments on a one-on-one basis. Members of the public may also provide written comments on comment forms that will be available at the hearing.
- After the oral comments have been completed, the Public Hearing will come to an end. The Army and Air Force will provide closing remarks and emphasize that the public can still comment on the *JPARC Modernization and Enhancement Draft EIS* until July 9, 2012.
- All public comments issued at each Public Hearing for the *JPARC Modernization and Enhancement Draft EIS* will be included in the Final EIS with a formal response issued by the Army and Air Force.

■ **What is the value of JPARC to our country's security?**

Because Alaska offers a vast area for training, the armed services here are able to practice more realistic combat situations and testing of combat systems. Through JPARC, our military works together, creating efficiencies while we prepare to defend our country into the 21st Century.

■ **What are you proposing?**

With the enhancements that we are asking the public to review, JPARC will be able to offer modern, world-class training capabilities that will prepare our armed forces to meet new threats on the world stage. The proposals will allow us to implement new technology, practice advanced combat tactics, offer realistic training opportunities and build on the strengths of all our armed services. Our overall goal is to allow the armed services to train realistically and jointly so military personnel will succeed in their mutually supportive combat roles when exposed to situations faced in actual combat.

■ **What are the specifics of these proposals? How can I learn more about how they might affect my community?**

Details on the proposed actions and alternatives related to *JPARC Modernization and Enhancement EIS* can be found on the Proposed Actions page [here](#). This site includes maps that will help you better understand the proposals for various areas in JPARC and surrounding communities. Please send questions to ALCOM via alcom08@elmendorf.af.mil, or you may call or write the ALCOM Public Affairs office:

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506
Phone: 907-552-2341
Email: alcom08@elmendorf.af.mil

■ **Why are you asking for these changes now?**

JPARC originally was developed to support cold war weapons and tactics. In its current configuration, we cannot fully accommodate the critical military exercises that take place in Alaska. JPARC needs to reflect the defense requirements of the 21st Century.

■ **How will you pay for these changes?**

Funding will most likely come through the individual Services and the Department of Defense. In today's economic environment, we need to be good stewards of finances. Engaging in joint training allows the armed services to share training assets to maximize their value.

■ **Why are you preparing an Environmental Impact Statement (EIS) for the JPARC enhancements?**

Federal law, particularly the National Environmental Policy Act, requires an EIS for projects that are considered major actions, which is the case for the JPARC proposals. An EIS assures that the public has the chance to review proposals and register comments on them. The Department of Defense will consider community needs and all public comment before deciding which, if any, of the proposals will be implemented.

■ **What will the JPARC EIS address?**

The EIS will analyze and evaluate potential impacts on the natural, human and cultural environment. Such impacts can be beneficial or adverse, short-term or long-term, direct or indirect, and secondary or cumulative.

■ **How will JPARC affect the bases near Anchorage and Fairbanks?**

Joint Base Elmendorf-Richardson, Eielson Air Force Base, Fort Wainwright and Fort Greely will provide logistics and comprehensive support to undertake JPARC training, exercises and testing. As part of this EIS, we will evaluate the impact on the bases and surrounding areas – and welcome the public's comment on them.

■ **Will JPARC have an impact on the National Guard?**

The Alaska National Guard trains in the same airspace and ranges as active duty Army and Air Force personnel. The National Guard is part of the planning team for JPARC. A key objective for all the armed services – both state and federal – is to participate in the joint military training and exercises being developed at JPARC.

■ **What effect will the JPARC enhancements have on land and airspace that is used for subsistence, recreation and private aviation?**

This is a key element that will be analyzed and discussed as the public becomes involved in JPARC decisions. As JPARC develops over the next 20 years, opportunities may arise for enhanced public use through roads and infrastructure in currently undeveloped areas. While some JPARC range and airspace areas would need to be restricted from public use, particularly during training, JPARC is distinct in that the military would strive to keep areas open to the public when feasible. Every effort will be made to minimize the impact on Alaskans' use of these areas.

■ **Much of the JPARC area appears to be in rural Alaska. How will you accommodate the needs of our smaller communities?**

Rural communities and lifestyles are valued and will be fully considered in this process. Particular attention will be given to possible effects on wildlife, waterways, fisheries and Alaska Native subsistence needs. Again, we hope rural Alaskans and Alaska Natives will become involved in reviewing the proposals and let us know the impacts on them and their communities.

■ **How can I become involved in this process and register my comments?**

ALCOM will accept public comments on the Draft EIS from March 30, 2012 to July 9, 2012. The Draft EIS was released to the public for review and comment on March 30, 2012. The Draft EIS includes a full description of the affected environment, proposed actions and alternatives, and an analysis of the impacts of each proposed action alternative, including the no action alternative.

The public has the opportunity to submit written comments on the Draft EIS electronically through this website or via mail to ALCOM Public Affairs. Public hearings will also be held. Public hearing dates and locations for the month of May are available [here](#) and will be advertised during the weeks prior.

Based on comments received on the Draft EIS, the Army and Air Force, in coordination with ALCOM, will prepare a Final EIS. The Final EIS is reviewed by the Army, Air Force, and ALCOM. They will select a preferred alternative and mitigation measures for each definitive proposed action, as applicable. After the 30-day waiting period, the Army and Air Force will issue a Record of Decision (ROD), which explains the project decision as completely as possible, based on information contained in the Final EIS.

Public participation is an integral part of the EIS process and we appreciate your involvement. Submit public comments at any time between March 30, 2012 and July 9, 2012 to: ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506; Phone: 907-552-2341; Email: alcom108@elmendorf.af.mil

■ **Will your proposals result in the cancellation of the Arctic Man Classic outside Paxson?**

No. The proposals for the area near Summit Lake, where Arctic Man is conducted, involve airspace only – not ground activities.

Get Involved »

There are numerous opportunities to be involved in the JPARC Modernization and Enhancement EIS process.

The Draft EIS became available for public review on March 30, 2012. The Draft EIS is made available to the public and other agencies to comment on the findings in the Draft EIS. Given the feedback provided during the [public hearings](#), which were held throughout Alaska between May 11 - 23, 2012, ALCOM has extended the comment period from 70 days to 102 days. The comment period will now close on July 9, 2012.

Between March 30 and July 9, 2012, the public is asked to submit written comments on the Draft EIS electronically through this website or via mail to ALCOM Public Affairs.

Based on comments received on the Draft EIS, the Army and Air Force, in coordination with ALCOM, will prepare a Final EIS. The Final EIS is reviewed by the Army, Air Force, and ALCOM who will select a preferred alternative and mitigation measures for each definitive proposed action, as applicable. After the 30-day waiting period, the Army and Air Force will issue a Record of Decision, which explains the project decision as completely as possible, based on information contained in the Final EIS, including the specific mitigations for the definitive proposed actions.

Public participation is an integral part of the NEPA process and we appreciate your involvement.

You can submit your comments between March 30 and July 9, 2012 on this website [here](#) or to:

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506
Phone: 907-552-2341
Email: alcom.08@elmendorf.af.mil

Your involvement and participation are essential to the EIS process.

M.3.2 Newspaper Display Advertisements

Alaskan Command (ALCOM), on behalf of the U.S. Army and U.S. Air Force, are hosting public hearings for the Draft *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska.*

Currently, the JPARC consists of all land, air, and sea training areas used by the Army, Air Force, Navy and Marine Corps in Alaska to support military exercises. The proposed JPARC enhancements would:

- Enable realistic training and testing to support new technologies
- Respond to recent battlefield experiences
- Enable the military to train with new weapons systems and tactics so military personnel can succeed in actual combat

Pursuant to the National Environmental Policy Act, the Army and Air Force EIS analyzes potential environmental consequences associated with expanding and/or establishing new Military Operations Areas, restricted airspace, airspace corridors, ground maneuver training areas, and training complexes. The EIS addresses action alternatives as well as No Action Alternatives, in which the military would not implement any new proposals and would continue with current training limitations.

A copy of the Draft EIS is available to download from www.jpisceis.com. You may also request a CD copy from ALCOM Public Affairs (PA) (contact information below) or view a paper copy at the Alaska Department of Fish and Game in Glennallen, the Paxson Lodge, and the following libraries: Anchorage Z. J. Loussac; UAA Resources Information Services; Fairbanks North Star Borough (Noel Wien); Fairbanks Elmer E. Rasmuson; Palmer Public; Copper Valley Community; Delta Community; Tri-Valley School/Community; Talkeetna Public; Willow Public; and Wasilla Public.

ALCOM will host public hearings to provide the public an opportunity to learn about the proposals and provide input. Citizens and government representatives are invited. The schedule and locations of the public hearings are provided below. If you are unable to attend a public hearing, you may submit your comments on the Draft EIS to the ALCOM PA office. To be considered in the review of the Draft EIS all comments must be received by the conclusion of the public comment period, on June 7, 2012.

Public hearings are from 5 – 9 p.m., with a presentation at 5:45 p.m., with the exception of the Fairbanks hearings, which run from 10 a.m. – 2 p.m. and 4 – 8 p.m. with presentations at 10:45 a.m. & 4:45 p.m.

Release 001 / March 30, 2012

MILITARY WILL HOST PUBLIC HEARINGS ON AN ENVIRONMENTAL IMPACT STATEMENT FOR PROPOSED JOINT PACIFIC ALASKA RANGE COMPLEX

JOINT BASE ELMENDORF-RICHARDSON, ALASKA – In accordance with the National Environmental Policy Act (NEPA), Alaskan Command (ALCOM), on behalf of the U.S. Army and U.S. Air Force, announces the availability of the Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska (JPARC Modernization and Enhancement Draft EIS).

The Draft EIS describes and analyzes the potential environmental effects associated with the Air Force and Army proposals to modernize and enhance the JPARC in Alaska to best support the military exercises in and near Alaska. At present, the JPARC consists of all land, air, and sea training areas used by the Army, Air Force, Navy, and Marine Corps (the services) in Alaska. The military currently uses the JPARC to conduct testing, training, and to support various joint exercises and mission rehearsals.

The JPARC was originally developed to support older and in some cases now obsolete weapons and tactics. Its current configuration cannot fully meet the training requirement for military forces and exercises conducted in Alaska. The JPARC requires a more contemporary and versatile design and improved infrastructure to meet the present and future needs of the military. The proposed JPARC modernization and enhancements would enable realistic joint training and testing to support emerging technologies, respond to recent battlefield experiences, and train with new weapons systems and tactics to meet combat and national security needs.

The JPARC Modernization and Enhancement DEIS analyzes the following 12 proposals - 6 definitive and 6 programmatic - including several viable alternative actions, as well as "no-action" alternatives.

Definitive Actions Evaluated in this Environmental Impact Statement:

- 1) Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA
- 2) Realistic Live Ordnance Delivery
- 3) Establish New Restricted Area Over the Battle Area Complex and Combined Arms
- 4) Expansion of Restricted Area R-2205
- 5) Night Joint Training
- 6) Unmanned Aerial Vehicle (UAV) Access Corridors

Programmatic Actions Evaluated in this Environmental Impact Statement:

- 1) Enhanced Ground Maneuver Space
- 2) Tanana Flats Training Area (TFTA) Roadway Access
- 3) Joint Air–Ground Integration Complex (JAGIC)
- 4) Intermediate Staging Bases (ISBs)
- 5) Missile Live Fire for AIM-9 and AIM-120
- 6) Joint Precision Airdrop System (JPADS) Drop Zones

Projects currently proposed to be addressed in the JPARC Modernization and Enhancement EIS can be viewed online at www.jparceis.com. Decisions on definitive proposal alternatives will be announced in the 2013 Record of Decision. Final decisions on the programmatic proposals will not be made prior to required subsequent tiered or supplemental environmental impact analysis.

A copy of the Draft EIS will be available to download online at <http://www.jparceis.com>. CDs of the DEIS will also be mailed to persons requesting a copy and will be available in hard copy format at the following libraries or locations: Anchorage Z. J. Loussac; UAA Alaska Resources Library and Information Services; Fairbanks North Star Borough (Noel Wien); Fairbanks Elmer E. Rasmuson Library; Palmer Public Library; Copper Valley Community Library; Alaska Department of Fish and Game in Glennallen; Paxson Lodge; Delta Community Library; Tri-Valley School/Community Library; Talkeetna Public Library; Willow Public Library; and Wasilla Public Library.

Comments from the public will be considered before any final decision is made. ALCOM will host public hearings to solicit public and agency input. All members of the public are invited. The schedule and locations of the public hearings are provided below:

Friday May 11, 2012	University of Alaska, Anchorage, Lucy Cuddy Hall, 2921 Spirit Way, Anchorage, Alaska
Monday May 14, 2012	Palmer Community Center (The Railroad Depot), 610 S. Valley Way, Palmer, Alaska
Tuesday May 15, 2012	Lake Louise Lodge, Mile 16.1 Lake Louise Road, Glennallen, Alaska
Wednesday May 16, 2012	Caribou Hotel, Mile 186.5 Glenn Highway, Glennallen, Alaska
Thursday May 17, 2012	Paxson Lodge, Mile 185.5 Richardson Highway, Paxson, Alaska
Friday May 18, 2012	Alaskan Steakhouse and Motel, Mile 265 Richardson Highway, Delta Junction, Alaska
Saturday May 19, 2012	University of Alaska Fairbanks, William R. Wood Center, multi-level lounge, 505 S. Chandalar Drive, Fairbanks, Alaska
Monday May 21, 2012	Tri-Valley Community Center, 1 Healy Spur Rd, Healy, Alaska
Tuesday May 22, 2012	Swiss Alaska Inn, 22056 South F Street Talkeetna, Alaska
Wednesday May 23, 2012	Menard Memorial Sports Center, 1001 S. Mack Drive Wasilla, Alaska

All hearings are scheduled to run from 5:00 – 9:00 p.m. with a 5:45 p.m. presentation, with the exception of the Fairbanks hearing, which is scheduled to occur from 10:00 a.m. to 2:00 p.m. and 4:00 to 8:00 p.m., with presentations at 10:45 a.m. and 4:45 p.m.

The first 45 minutes of the public hearing will be an opportunity for community members to learn more about the JPARC and EIS process and speak with Army and Air Force personnel one-on-one. This is an open house question and answer session. The Army and Air Force will begin a formal presentation after the open house. Comments received during the presentation are not considered part of the EIS administrative record. The presentation will provide information on the purpose and need and descriptions of the proposed actions and alternatives. The Air Force and Army will then open up the hearing for formal public comment and testimony. Comments may be submitted orally or in writing. A court reporter will be available to record all oral comments. Comments provided during the formal testimony will become part of the EIS administrative record. Substantive comments will be responded to in the Final EIS.

Federal, state, and local agencies, and interested groups and persons are encouraged to provide comments on the proposed action either at the public hearings or by mail, phone, or fax at the address and numbers provided below. More information can be found at the project website at www.jparceis.com. Written comments presented at public scoping or received no later than June 7, 2012, will be considered in the preparation of the final EIS.

MILITARY WILL HOST PUBLIC HEARINGS ON AN ENVIRONMENTAL IMPACT STATEMENT FOR PROPOSED JOINT PACIFIC ALASKA RANGE COMPLEX

JOINT BASE ELMENDORF-RICHARDSON, ALASKA – The U.S. military invites you to attend a public hearing to learn about current Joint Pacific Alaska Range Complex (JPARC) proposals. The proposed JPARC actions would create improved joint military training and testing opportunities for the Army, Air Force, Navy, and Marine Corps through modernization and enhancement of the training areas and capabilities currently existing in Alaska. The Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska has been prepared and is currently available for review. The EIS addresses the potential effects of the JPARC proposal.

A copy of the Draft EIS is available to download from www.jpisceis.com. You may also request a CD copy from Alaskan Command (ALCOM) Public Affairs (contact information below) or view a paper copy at the following libraries and locations: Anchorage Z. J. Loussac; UAA Alaska Resources Library and Information Services; Fairbanks North Star Borough (Noel Wien); Fairbanks Elmer E. Rasmuson Library; Palmer Public Library; Copper Valley Community Library; Alaska Department of Fish and Game in Glennallen; Paxson Lodge; Delta Community Library; Tri-Valley School/Community Library; Talkeetna Public Library; Willow Public Library; and Wasilla Public Library. ALCOM will host public hearings in communities near the proposed changes to provide the public an opportunity to learn about the impacts of the proposals and provide input. Citizens and government representatives are invited. The schedule and locations of the public hearings are as follows:

Public hearings are from 5:00 – 9:00 p.m., with a presentation at 5:45 p.m., except where noted*

Day	Date	Location
Friday	May 11, 2012	University of Alaska, Anchorage, Lucy Cuddy Hall, 2921 Spirit Way, Anchorage, AK
Monday	May 14, 2012	Palmer Community Center (The Railroad Depot), 610 S. Valley Way, Palmer, AK
Tuesday	May 15, 2012	Lake Louise Lodge, Mile 16.1 Lake Louise Road, Glennallen, AK
Wednesday	May 16, 2012	Caribou Hotel, Mile 186.5 Glenn Highway, Glennallen, AK
Thursday	May 17, 2012	Paxson Lodge, Mile 185.5 Richardson Highway, Dot Lake, AK

Friday	May 18, 2012	Alaskan Steakhouse and Motel, Mile 265 Richardson Highway, Delta Junction, AK
*Saturday	May 19, 2012	University of Alaska Fairbanks, William R. Wood Center, multi-level lounge, 505 S. Chandalar Drive, Fairbanks, AK
		10:00 a.m.–2:00 p.m. hearing with presentation to 10:45 a.m. / 4:00–8:00 p.m. hearing with presentation at 4:45 p.m.
Monday	May 21, 2012	Tri-Valley Community Center, 1 Healy Spur Rd, Healy, AK
Tuesday	May 22, 2012	Swiss Alaska Inn, 22056 South F Street, Talkeetna, AK
Wednesday	May 23, 2012	Menard Memorial Sports Center, 1001 S. Mack Drive, Wasilla, AK

If you are unable to attend a public hearing, you may submit your comments on the Draft EIS to the ALCOM Public Affairs office at 9480 Pease Avenue, Suite 120, JBER, AK 99506 or by fax at 907 552 5411. To be considered in the review of the Final EIS, all comments must be received by June 7, 2012.

Modernization and Enhancement Environmental Impact Statement

The National Environmental Policy Act (NEPA) is our national mandate for making informed decisions while considering environmental impacts. When federal agencies propose projects having the potential to significantly impact the environment, NEPA requires the following process be undertaken as part of the planning process before final decisions are made:

- Evaluation and consideration of potential environmental consequences for proposals that may significantly impact the environment
- Consideration of public and government agency comment

Draft EIS/Notice of Availability (NOA)

The Draft EIS was filed with the U.S. Environmental Protection Agency and made available to interested parties. The NOA of the Draft EIS is published in the *Federal Register* and local newspapers to inform agencies and citizens that the document is available for review. The Draft EIS:

- Identifies and describes the affected environment
- Evaluates the potential environmental consequences from a range of reasonable alternatives
- Identifies environmental permits and specific mitigation measures to avoid, minimize, or reduce environmental impacts if required

Public Hearings and Draft EIS Comment Period

The Draft EIS is made available to the public and other agencies to comment on the analysis for a minimum of 45 days, as required under NEPA. Given the public and agency interest expressed during the scoping process, ALCOM has extended the comment period to 70 days. During this time, 10 public hearings will be held throughout Alaska.

Please take this opportunity to:

- ☒ Learn about the proposals and the Draft EIS
- ☒ Ask questions and identify issues
- ☒ Comment on the Draft EIS

Public Comment Period

Submit comments electronically at www.jparcheis.com or by mail before **June 7, 2012** to:

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506
Phone: (907) 552-2341; Fax: (907) 552-5411

There are numerous opportunities to be involved in the *JPARC Modernization and Enhancement EIS* process.

Environmental Resource Areas

The Draft EIS evaluates the potential environmental impacts from the JPARC proposed actions and alternatives in addition to no-action alternatives. The environmental resource areas studied in the Draft EIS include the following:

- ▶ **Airspace Operations**
Airspace, Noise, Air Quality, and Safety (Ground and Air)
- ▶ **Natural Resources**
Geology, Soils, Water, and Biological Resources
- ▶ **Cultural Resources**
Cultural, Alaska Native, and Subsistence Resources
- ▶ **Human Resources**
Land Use, Recreation and Visual Resources, Socioeconomics, Environmental Justice, and Risks to Children
- ▶ **Community Infrastructure**
Public Services, Hazardous Materials and Waste, and Transportation

Purpose and Need

The U.S. Department of Defense (DoD) continues to face exceptional challenges to meet increasingly urgent national security needs. The overall purpose of the proposed actions in the *JPARC Modernization and Enhancement EIS* is to enhance and modernize the capabilities of the JPARC to meet the needs of the military units that train in the State of Alaska more effectively. These proposed modernizations and enhancements to the JPARC are required because of:

- Significant advances in warfighting technology
- Advances in combat tactics and lessons learned from combat
- The need for realistic, yet efficient training
- Requirements for the military to train to operate jointly

Currently, Alaska's military training assets include air, land, and sea areas to replicate realistic conditions for training and testing of combat systems. However, expanded weapons and sensor capabilities, expanded mobility, and improved communications have all driven the need for larger training areas and safety zones. To address this need, the Army and Air Force undertook a rigorous screening and evaluation process to identify actions and projects in the *JPARC Modernization and Enhancement EIS*.

Alaska provides a unique backdrop with an uncluttered electromagnetic environment, minimal encroachment, and a strategic location within the United States. The expanse and availability of military ranges, training land, and airspace would allow Service members to train jointly on individual skills as well as complex, interrelated tasks.

Developing the JPARC would build on a firm foundation of extensive training, decades of testing, and range infrastructure already in place in Alaska. Future investments would come from the individual Services—Army, Navy, and Air Force—that would jointly benefit from these capabilities.

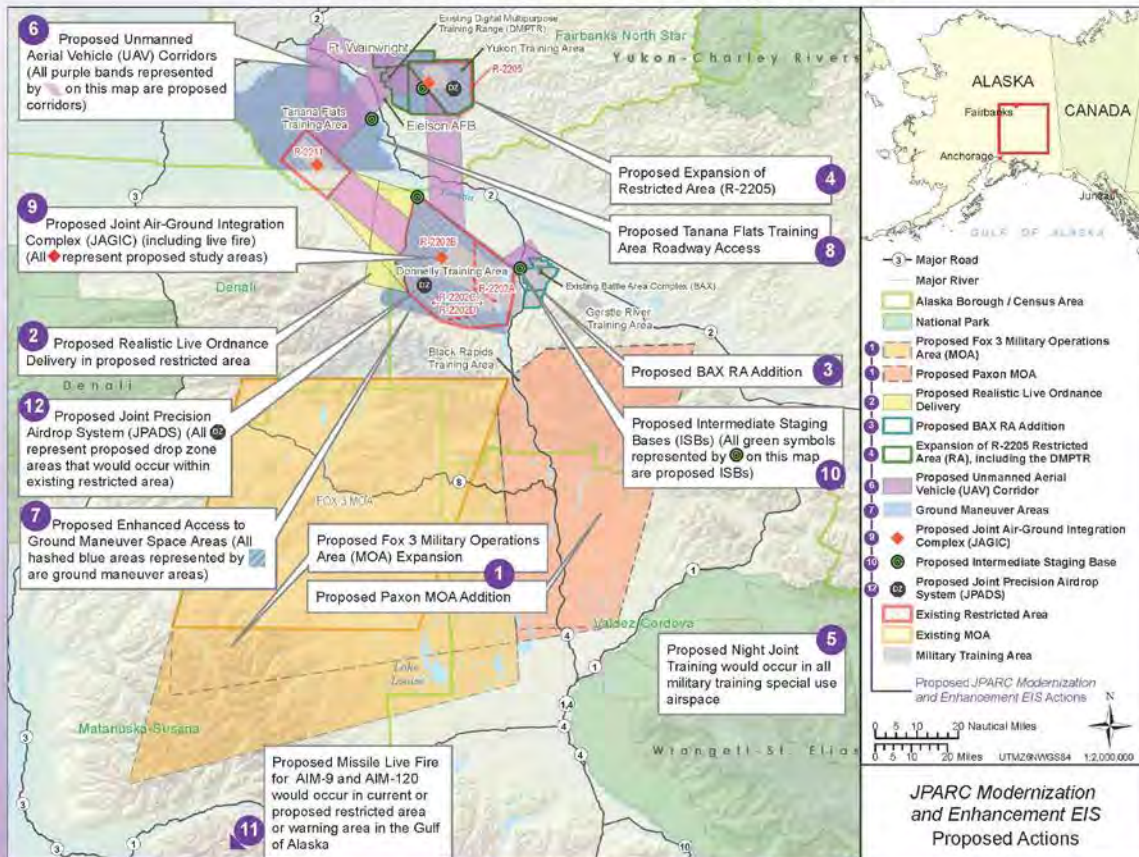

Proposal Overview

Currently, Alaska's military training assets include air, land, and sea areas to replicate realistic conditions for training and testing of combat systems. Expanded weapons and sensor capabilities, expanded mobility, and improved communications drive the need for larger training areas and safety zones. To address this need the Army and Air Force undertook a rigorous screening and evaluation process to identify actions and projects in the JPARC Modernization and Enhancement EIS shown below.

Generally, the proposals involve expanding and/or establishing new Military Operations Areas, restricted airspace, and airspace corridors; expanding access to training areas; and developing new ranges and facilities to provide adequate resources to conduct training and testing under realistic and varied conditions.

JPARC Modernization and Enhancement EIS Proposed Actions

The proposed JPARC would create improved training and testing opportunities through modernization and enhancement of Alaska's current training areas and capabilities.

1 Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA

Proposed Action: Expand the existing Fox 3 MOA and establish a new, adjacent Paxon MOA with both extending from 500 feet above ground level (AGL) up to, but not including, flight level (FL)180 (18,000 feet mean sea level [MSL]).

Key Components:

- The new proposed MOAs would provide the vertical and horizontal airspace structure needed to better accommodate low-altitude threat and multiple-axis mission activities during the JPARC training exercises.
- Expand boundaries of the existing Fox 3 MOA to the south and east with the low-altitude sector extending from 500 feet AGL up to, but not including, 5,000 feet AGL and high-altitude sector extending from 5,000 feet AGL up to, but not including 18,000 feet MSL.
- Establish new Paxon MOA with the low-altitude sector extending from 500 feet AGL up to, but not including, 14,000 feet MSL and the high-altitude sector extending from 14,000 feet MSL up to, but not including, FL180.
- Routine training would occur year-round in both proposed MOAs but would be limited to the Paxon high-altitude sector under both alternatives.
- Up to six Major Flying Exercises (MFEs) would occur a maximum of 60 days per year in both MOAs and their high/low-altitude sectors.
- Use of both proposed MOAs would not change significantly from the representative current/future planned Fox 3 MOA uses.
- Enhance the realism of the training by allowing both the defensive and aggressor aircraft to replicate tactics expected from adversaries during actual combat missions.

Alternative A: Includes the proposed expanded Fox 3 MOA and the proposed new Paxon MOA with both the high- and low-altitude MOAs.

Alternative E: Airspace structure for the Fox 3 MOA expansion under this alternative would be smaller, with the southern boundary moved approximately 20 nautical miles (NM) to the north.

No Action: Taking no action would not provide the expansion of the current Fox 3 MOA, the proposed addition of Paxon MOA, and would not satisfy the requirement for multiple-axis, low-altitude threat, and ordnance delivery training needed to effectively train with F-22 and fifth-generation fighter aircraft. This alternative would also continue to require more distant travel from JBER, which would negate opportunities for potential energy savings.

Alternatives Considered But Not Carried Forward

The following alternatives were dismissed from further consideration since scoping:

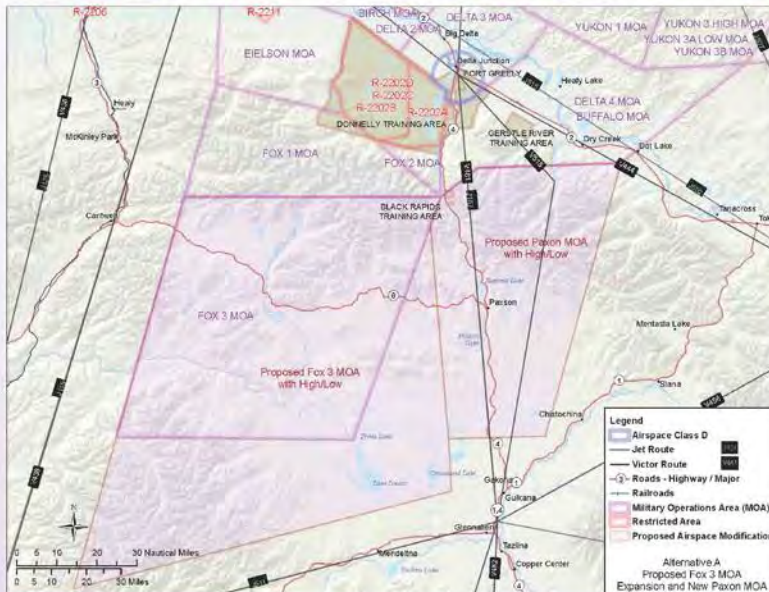

Alternative B: Included only the proposed Fox 3 MOA expansion without the proposed new Paxon MOA.

Alternative C: Included the Fox 3 MOA expansion without the low altitude sector below 5,000 feet AGL.

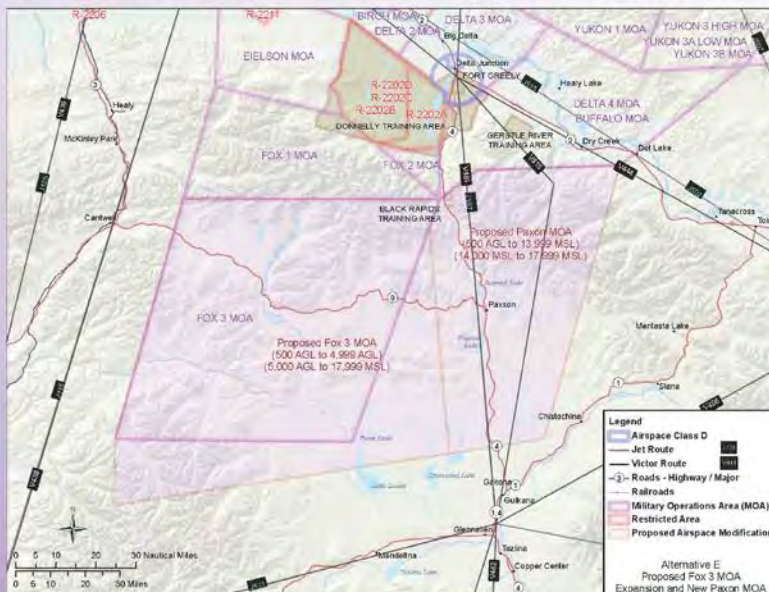

Alternative D: Maintain current Fox 3 MOA boundaries with both high- and low-altitude sectors.

1 Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA

Alternative A: Proposed Fox 3 MOA Expansion and New Paxon MOA with High- and Low-Altitude Sectors.

Alternative E: Proposed Truncated Fox 3 MOA Expansion and New Paxon MOA with High- and Low-Altitude Sectors.

2 Realistic Live Ordnance Delivery

Proposed Action: Establish a realistic air-to-ground training environment to accommodate increased standoff range delivery of live ordnance from fifth generation fighter aircraft employing modern weapons.

Key Components:

- The current training environment does not provide the protective airspace required to launch these longer range weapons systems.
- Both live and inert ordnance delivery would be conducted as part of both individual pilot and joint air and ground training activities.
- Expand the restricted area (R-2202) boundaries to the extent required to contain airspace and controlled land areas for aircraft release of live ordnance on existing targets within the Oklahoma and/or Blair Lakes Impact area.
- Targets must be located within existing duded or temporary impact areas.
- Proposed altitudes would extend from the surface to an unlimited ceiling (specified higher altitudes coordinated with the Federal Aviation Administration (FAA) for individual live ordnance delivery missions).
- The anticipated schedule for ordnance delivery training would be the same as currently exists for R-2202 use for 90 to 150 days annually at a maximum of 5 hours daily, and would include the RED FLAG–ALASKA flying periods.
- The GBU-32 Joint Direct Attack Munition (JDAM), both live and inert, and Small Diameter Bomb (SDB), live only, have the largest footprints and serve as the basis for planning the target locations and airspace needed to support live ordnance delivery using these systems.
- The number of live and inert ordnance drop events would be approximately 200 annually, respectively.
- The proposed expansion of existing restricted area for this proposed action would require the acquisition of new restricted airspace to the surface in areas not currently under Department of Defense (DoD) jurisdiction.
- An element of each action alternative includes an inert component with temporary impact areas and targets in northwest and southwest Donnelly Training Area (DTA) for new run-in headings, release points, and hazard zones from JBER to the south and a temporary impact area and target in southwest DTA from Eielson AFB from the north.

Alternative A: Expand restricted airspace for live and inert ordnance delivery by expanding R-2202 to the west.

Alternative B: Expand restricted airspace for live and inert ordnance delivery by linking R-2211 and R-2202.

No Action: Taking no action would involve not expanding the restricted area footprint, associated weapon danger zone (WDZ), and hazard areas for ordnance delivery or the use of ordnance requiring an expanded footprint which is a critical element of the proposed JPARC full-spectrum and air-ground domain training requirements.

Alternatives Considered But Not Carried Forward

Scoping Alternative: Establish a weapons corridors through the Eielson military operations area (MOA) and overlying air traffic control assigned airspace (ATCAA) to provide two protective pathways for live ordnance use within the Oklahoma Impact Area. This alternative would have required the designation of a special airspace where operations and air traffic rules would have to be authorized and prescribed by the FAA.

Scoping Alternative: Establish a new target area north of the Oklahoma Impact Area outside DTA for GBU-32 approaches within Target Area 546, and use existing targets in the Oklahoma Impact Area for all other ordnance. This would require new impact areas and would not support a SDB.

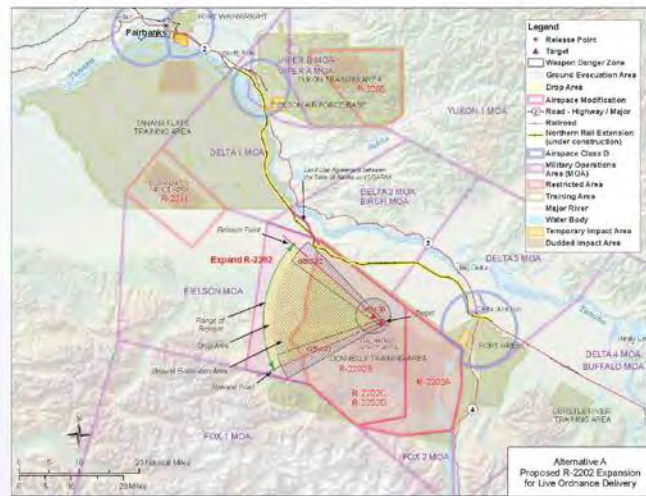

Scoping Alternative: Use existing targets in the Yukon Training Area (YTA) and expand R-2205 eastward and adjust the floor altitude. This alternative would provide limited run-in headings because of public and private lands within this area.

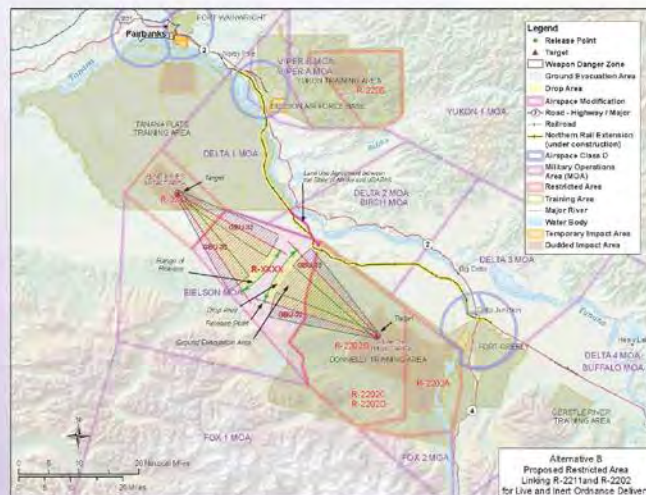

2 Realistic Live Ordnance Delivery

Alternatives A and B: Proposed R-2202 North-South Run-In Headings for Inert Ordnance Delivery.

Alternative A: Proposed R-2202 Expansion for Live Ordnance Delivery.

Alternative B: Proposed Restricted Area Linking R-2211 and R-2202 for Live and Inert Ordnance Delivery.

3 Battle Area Complex (BAX) Restricted Area Addition

Proposed Action: Establish a new restricted area over the BAX area. This airspace is proposed to be of sufficient area to encompass hazardous activities and weapons footprints for those types of munitions and ordnance to be used in this area and to fully support more realistic joint training at the BAX.

Key Components:

- Establish a restricted area for hazardous activities that cannot currently be performed within the existing Controlled Firing Area (CFA).
- Subdivide the proposed restricted area both laterally and vertically to activate only those areas/altitudes required for different mission activities.
- The proposed use would occur between 7:00 am and 7:00 pm local time with other times, as stipulated by Notice to Airmen (NOTAM).
- The BAX is used to train and test the Stryker Brigade Combat Team (SBCT), Airborne Brigade Combat Team (ABCT), and other units to detect, engage, and defeat stationary and moving infantry and armor targets in both open and urban terrain.
- This complex also supports tactical live-fire operations independently of, or simultaneously with, supporting vehicles and aircraft during maneuvers.
- BAX activities proposed in the lower-altitude layer below 6,000 feet mean sea level (MSL) would be approximately 60 percent of the training year.
- The Combined Arms Collective Training Facility (CACTF) is a critical component of the proposed action, as it replicates an urban environment.
- This training day consists of both daytime and nighttime operations.

Alternative A: Establishes a restricted area over the BAX that is subdivided into two sectors, R-XXXXA (north) and R-XXXXB (south), with three altitude layers: surface to 5,999 MSL; 6,000 feet MSL to 17,999 MSL, and flight level (FL) 180 to FL220.

Alternative B: Establishes a restricted area over the BAX and the CACTF. This restricted area would be subdivided into three sectors: R-XXXXA (north), R-XXXXB (center), and R-XXXXC (south) with three altitude layers: surface to 5,999 feet MSL, 6,000 feet MSL to 14,999 feet MSL, and 15,000 feet MSL to FL220. This additional expansion would meet both current and future needs by including proposed new firing points and protective Surface Danger Zones (SDZ).

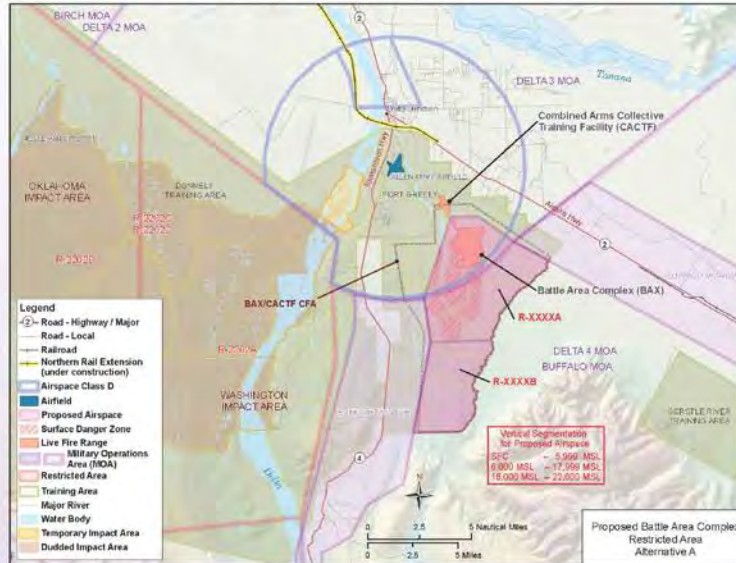

No Action: By taking no action, the existing CFA would remain in place without establishing any restricted area over the BAX in DTA-East. The lack of this capability involving the BAX would preclude realistic Army and Joint, Interagency, Intergovernmental and Multinational (JIIM) training with other forces critical to the JPARC vision, goals, and future concept of operations.

Alternatives Considered But Not Carried Forward

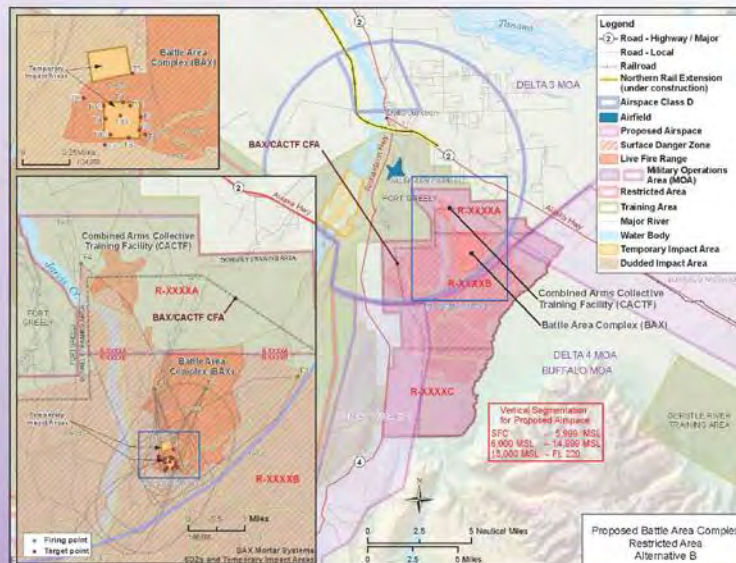

None.

3 Battle Area Complex (BAX) Restricted Area Addition

Alternative A: Proposed Battle Area Complex Restricted Area.

Alternative B: Proposed Battle Area Complex Restricted Area.

4 Expansion of Restricted Area R-2205

Proposed Action: Expand the restricted area in R-2205 to include the existing Digital Multi-Purpose Training Range (DMPTR) and the overall boundary of the Yukon Training Area (YTA). This action would provide the additional protective airspace required to more fully support hazardous activities and weapons footprints for the types of munitions and ordnance to be used within the area. The Army proposes to include the Air Force to develop YTA as one of the most prominent joint training areas in JPARC, given its ideal location near Fort Wainwright and Eielson Air Force Base (AFB).

Key Components:

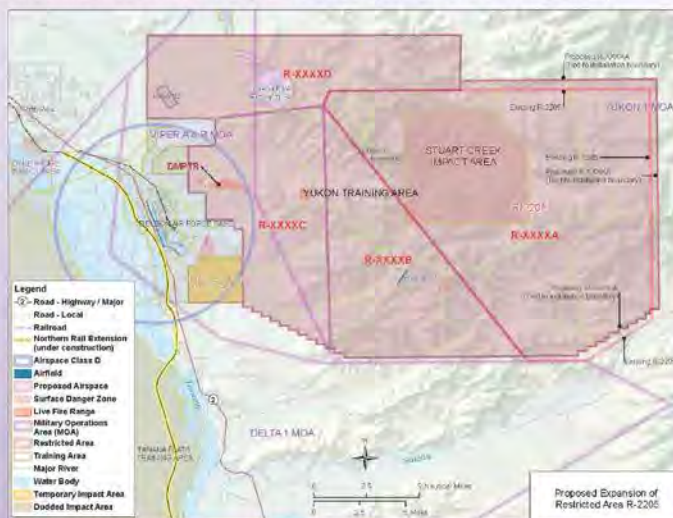

- Expand the existing R-2205 restricted area from the surface up to flight level (FL)310 to more fully encompass Department of Defense (DoD) controlled lands in YTA.
- Subdivide the expanded R-2205 into sectors (A through D) so as to activate only those sectors required on an individual basis to support hazardous mission and Unmanned Aerial Vehicle (UAV) flight activities.
- The airspace could be active 12 hours per day, 7:00 am to 7:00 pm local time, Monday through Friday, and other times, as required and stipulated by Notice to Airmen (NOTAM).
- Scheduled use of this airspace would be disseminated through the Special Use Airspace Information Service (SUAIS).
- The proposed restricted area would provide loitering airspace for helicopters and unmanned aerial vehicles (UAVs) within controlled airspace in conjunction with training activities being conducted within the range impact areas.
- The training and exercise activities to be performed with the support of the expanded airspace within R-2205 would be similar in nature as for the Battle Area Complex (BAX)/Combined Arms Collective Training Facility (CACTF) proposed action activities.

Action Alternative: Expand current R-2205 over the DMPTR and YTA, with restricted airspace from surface to FL310 and lateral segmentation as depicted on the map.

No Action: By taking no action, no expansion of the restricted area R-2205 would take place, including over the DMPTR or the other proposed areas in the YTA. The lack of this capability would preclude realistic Joint Interagency, Intergovernmental and Multinational (JIIM) training with other forces critical to the JPARC vision, goals, and future concept of operations.

Actions Considered But Not Carried Forward

Scoping Alternative: An alternative for subdividing the expanded R-2205 into selectively segmented and standardized blocks around a generalized boundary of YTA was considered but dismissed from further consideration, as this configuration would not have included all the restricted area needed for full coverage in the southwest sector of YTA. It would also have required extending the proposed restricted area beyond existing military-controlled land north of the existing far northeast quadrant of the YTA boundary.

Proposed Expansion of Restricted Area R-2205, Including DMPTR

5 Night Joint Training

Proposed Action: Extend flight training operating hours from 10:00 pm to 1:00 am local time during the months of March and October to allow additional hours of darkness for more effectively completing night training requirements. The current 10:00 pm Air Force landing restriction coupled with the extended calendar days for daylight savings time instituted by the Energy Policy Act of 2005 severely limit capabilities for completing Major Flying Exercise (MFE) night training within the limited periods of darkness that occur during those two months before 10:00 pm local time.

Key Components:

- Both existing and proposed future Special Use Airspace (SUA) would be used to accommodate Air Force night training, while continuing to ensure noise-sensitive areas are avoided during those later-hour operations.
- Night ordnance use by the Air Force would take place during one RED FLAG-ALASKA exercise in a given year as part of this proposed action.
- Lights-out training would be performed under this proposal under the same conditions/restrictions as currently apply to these operations.
- The proposed action does not limit the ability or capabilities of the Army to conduct night flying training exercises as currently undertaken.

Alternative A: This alternative proposes to extend the JPARC Air Force flight operating hours to allow MFE tactical operations until midnight and landing by 1:00 am, local time, during March and October. This would allow night training during these 2 months for a minimum of 1.5 hours to a maximum of 2.5 hours for each exercise. Such exercise sessions would typically occur up to 10 nights per year with the number of aircraft sorties participating in each session (50 plus) being somewhat less than each daytime session (up to 70).

Alternative B: Under this alternative, JPARC Air Force operating hours would be extended to allow all MFE and routine tactical training operations until midnight and landing by 1:00 am, local time, during all months of the year and for all training by military users of the existing JPARC SUA requiring night flight training.

No Action: Taking no action would continue to limit night MFEs conducted in February, March, October, and November to 10:00 pm which would not compensate for the extended length of daylight savings time and would continue to impede training during March and October.

Alternatives Considered But Not Carried Forward

Scoping Alternative: This alternative involved extending JPARC operating hours for all training purposes until 11:00 pm and landing by midnight, local time, during March and October. This option was dismissed from further consideration because night training requirements for training other than MFEs can be accomplished during other months of the year that provide sufficient hours of darkness to accomplish this training.

6 Unmanned Aerial Vehicle (UAV) Access

Proposed Action: Establish new restricted areas or other suitable airspace to provide UAV transit to training areas in support of training operations for those mission activities currently performed in a combat environment.

Key Components:

- The following UAV corridors are proposed as separate airspace action alternatives: Eielson Air Force Base (AFB) to R-2211; Eielson AFB to R-2205; Allen Army Air Field to R-2202; R-2202 to R-2211; R-2205 to R-2202; Fort Wainwright to R-2211; and Fort Wainwright to R-2205.
- All Federal Aviation Administration (FAA) requirements for UAV operations would be met.
- Each proposed corridor would be between 5 and 8 nautical miles in width with a minimum altitude of 1,200 feet above ground level (AGL).
- Corridors with proposed altitudes up to 17,999 feet MSL would be segmented in three altitude layers for use of only those altitudes required for specific UAV types/missions: 1,200 feet AGL to 2,999 feet MSL, 3,000 feet MSL to 8,999 MSL, and 9,000 feet to 17,999 feet MSL. UAV operations would be conducted between 7:00 am and 7:00 pm, Monday-Friday with other times as stipulated by Notice to Airmen (NOTAM).
- UAV types/operations would adhere to FAA requirements to include being outfitted with a Mode-C transponder and FAA-approved lighting.

Alternative A: Proposes establishing new restricted area or other designated airspace for each UAV corridor identified in the proposed action.

Alternative B: Proposes establishing a Certificate of Authorization (COA) for each UAV corridor identified in the proposed action.

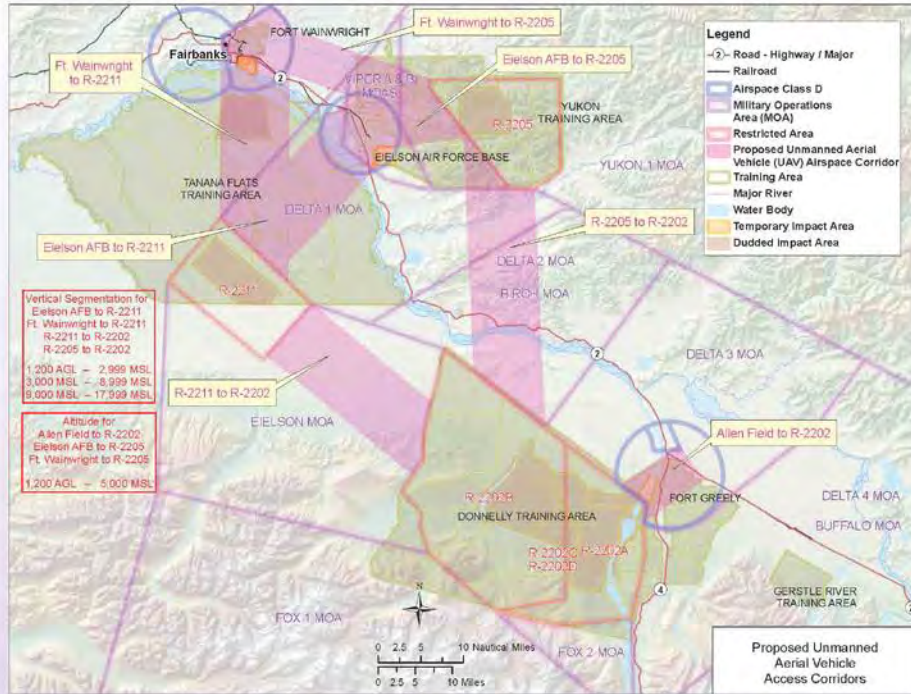

No Action: Taking no action would not provide the means of transiting or operating UAVs between Eielson AFB, Allen Army Air Field, restricted areas, and Fort Wainwright, thus preventing use of this airspace to conduct UAV training activities as a critical requirement to be integrated with overall JPARC training and exercises.

Alternatives Considered But Not Carried Forward

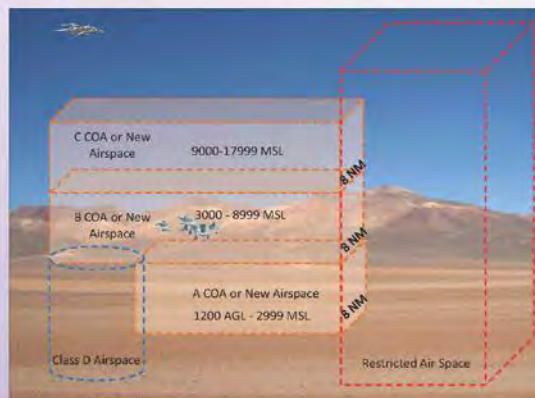

None.

6 Unmanned Aerial Vehicle (UAV) Access

Proposed Unmanned Aerial Vehicle Access Corridors

Unmanned Aerial Vehicle Corridor Airspace Classification Segmentation

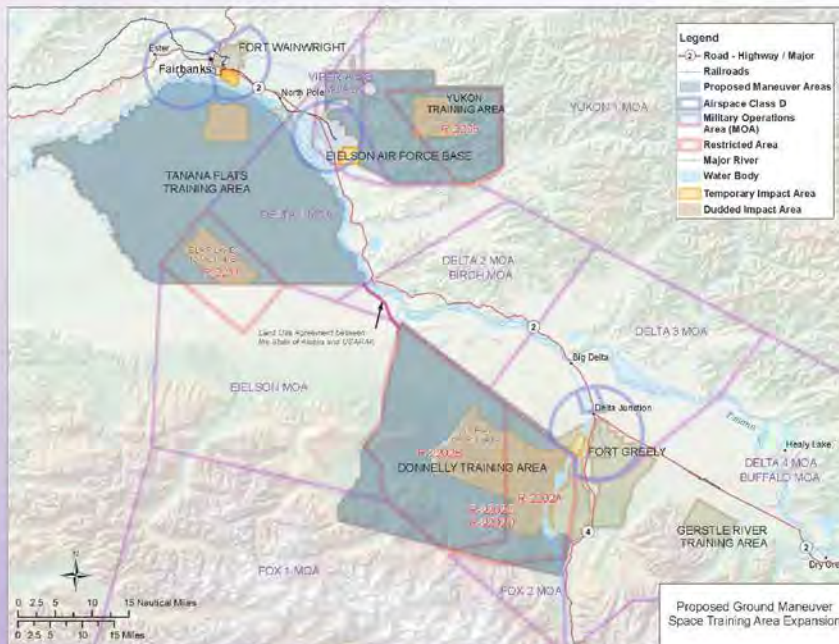

7 Enhanced Ground Maneuver Space

Proposed Action: Provide expanded access to ground maneuver space and year-round accessibility in the Tanana Flats (TFTA), Donnelly (DTA), and Yukon (YTA) Training Areas. The expanded access to ground maneuver space would support year-round training, internal circulation routes, and integration of proposed Intermediate Staging Bases (ISBs).

Key Components:

- The proposal provides year-round accessibility, internal circulation, and enhanced maneuver space would support at least battalion-size training events interacting with Joint Interagency Intergovernmental and Multinational (JIIM) components.
- Training frequency is planned to support seven combat maneuver battalions for a 10 to 14 day event at least once per year per battalion. The Army standard range available days for training is 242 days, annually.
- Provide the SUA required for Air Cavalry training areas and the SBCT and ABCT in the maneuver areas.
- Proposal is primarily ground-based and located within areas identified as maneuver training areas in current Army Range Development Plan.
- Proposal includes construction of training roads and trails and some off-road vehicle operations throughout 1.2 million acres of existing training areas in TFTA, DTA, and YTA.
- Road network siting proposes to optimize access to and from future ISBs and existing cantonment areas and main roadways.
- Includes roads capable of supporting a Stryker company outside of the hazard footprints from aerial ordnance or indirect fire.
- Future proposals for roads and trails to apply environmental planning and siting criteria to avoid and minimize impacts on cultural resources, wetlands, critical habitat, and other natural resources.

No Action: Taking no action would not allow the Army to expand, operate, or take advantage of year-round access to maneuver space in TFTA, DTA, or YTA, which would prevent the Army from conducting battalion-sized, non-live-fire maneuver exercises and meeting future training requirements.

Proposed Ground Maneuver Space Training Area Expansion

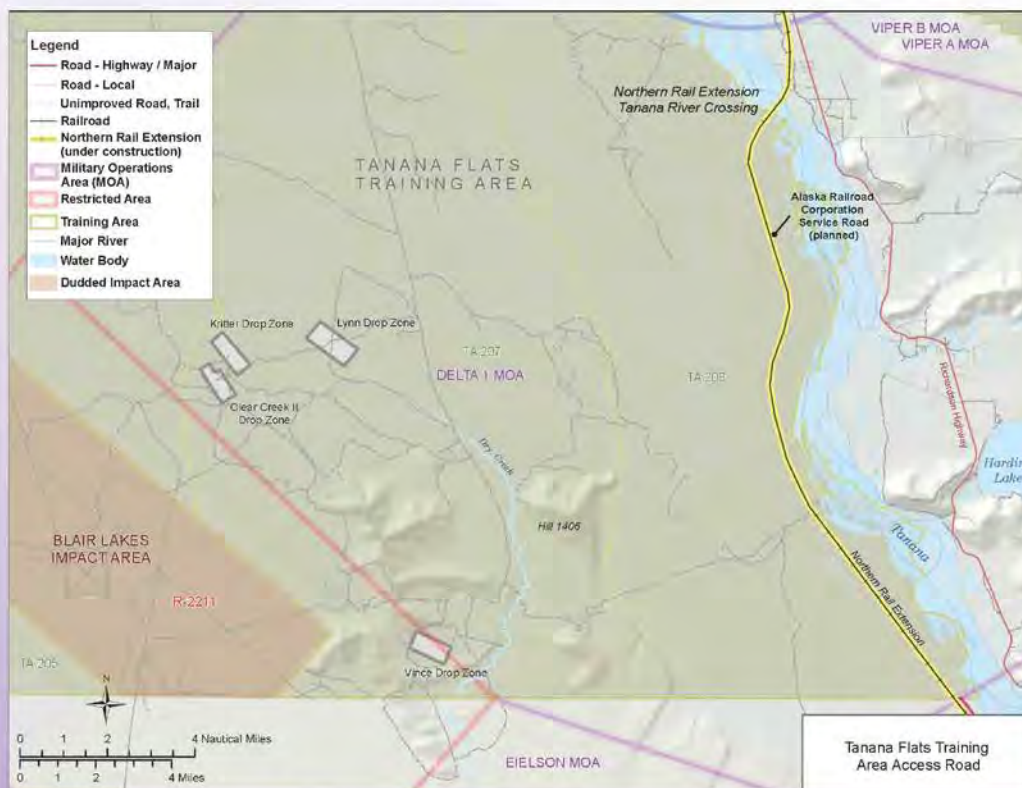

8 Programmatic Proposal: Tanana Flats Training Area (TFTA) Roadway Access

Proposed Action: Expand road access to provide year-round access into TFTA and the Blair Lakes Impact Area to enhance ground maneuver space.

Key Components:

- Provide a road surface 35-foot-wide with aggregate surface to allow two Stryker vehicles access and circulation.
- New road access to support year-round access and Army training in TFTA, at least 84 days per year anticipated at this time (based on 7 battalions training for up to 14 days each annually).
- Further development of the TFTA roadway access proposal would provide for year-round access, internal circulation, expanded maneuver areas, Intermediate Staging Bases (ISBs), and supporting infrastructure thereby providing significant improvement and new capability in Soldier maneuver exercises.

No Action: Taking no action would not provide for the construction and operation of a year-round access road to provide maneuver space in TFTA. The Army has training requirements for brigade-sized, non-live-fire maneuver exercises in TFTA. The lack of year-round training capability would deny realistic maneuver training, preventing the Army from meeting future training requirements and the ability to participate in joint training with the Air Force near the Blair Lakes Impact Area.

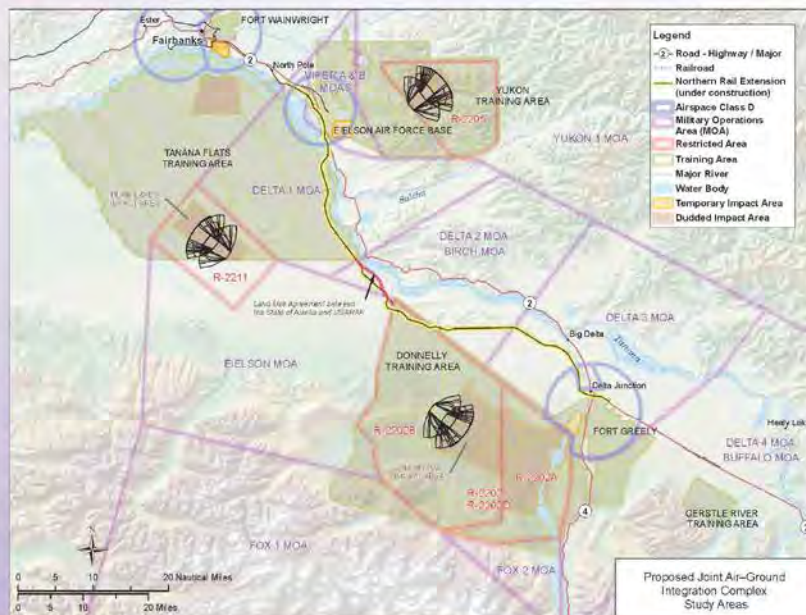

9 Programmatic Proposal: Joint Air–Ground Integration Complex (JAGIC)

Proposed Action: Establish a digitally-integrated combat training complex for joint and combined arms live-fire training. The JAGIC would allow Army combined arms capabilities to jointly train with the Air Force, Navy, Special Operation Forces, and Marine participants performing air-to-air and air-to-ground mission activities.

Key Components:

- The primary focus of the range is to train rotary-wing aviation units and crews on the skills necessary to detect, identify, and engage stationary and moving infantry and/or armor targets that have been strategically placed in a tactical arrangement.
- Company combined arms live-fire exercises (CALFEX) exercises and fully integrated advanced ordnance may be fired by mechanized infantry and armor crews and units.
- JAGIC needs to be strategically located to provide adequate airspace and controlled-access land for the safety buffers needed to train with a full range of the required capabilities and munitions that would be used in combat.
- A restricted area and MOA airspace is required to support a JAGIC.
- The JAGIC needs to adjoin an existing dudded impact area.
- Study areas under consideration for the JAGIC include Yukon (YTA), Tanana Flats (TFTA), and Donnelly (DTA) Training Areas, while only one would be selected for development during subsequent siting, design and environmental analysis by the Army.
- Physical development/construction for JAGIC include target arrays with service roads, range support buildings, parking area, range tower, convoy live-fire route, urban centers, and an area for rocket training.
- Most of the target arrays, the convoy live-fire route, and the urban facilities would be concentrated in a 9 by 12-kilometer area within the range.
- JAGIC encompasses a total footprint of approximately 12 by 18 kilometers (or approximately 7.5 by 11 miles).

No Action: Taking no action would not provide for the creation and operation of the JAGIC, denying realistic joint training among the Services in JPARC.

Proposed Joint Air–Ground Integration Complex Alternative Locations

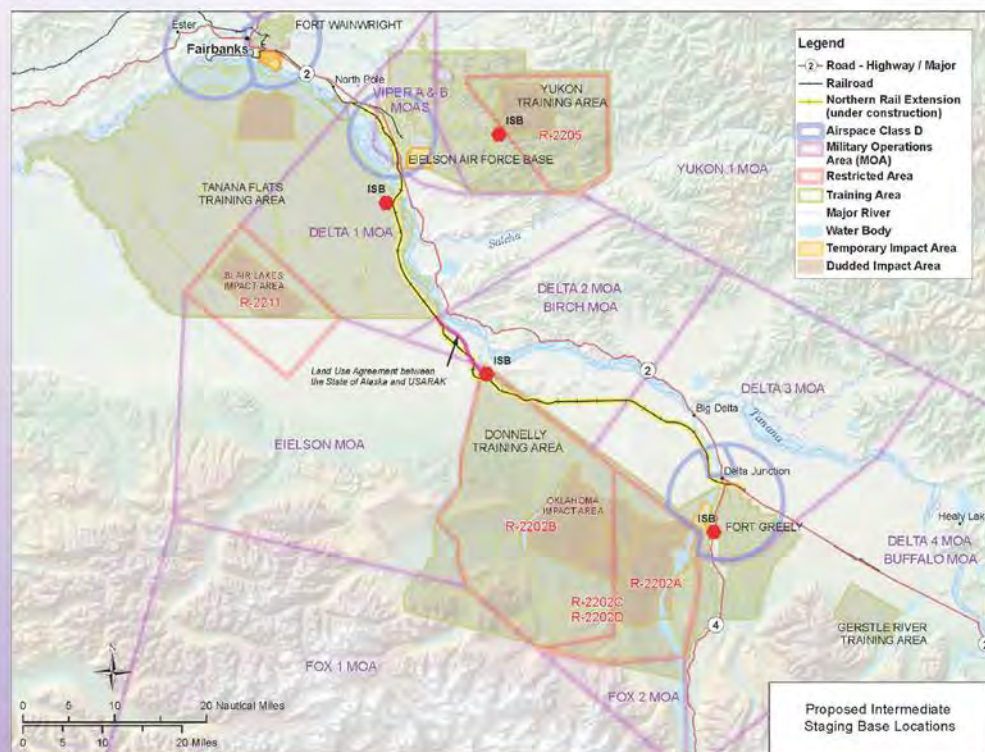

10 Programmatic Proposal: Intermediate Staging Bases (ISBs)

Proposed Action: Locate and construct a 1,000-Soldier ISB near the existing Battle Area Complex (BAX) in Donnelly Training Area-East (DTA-East), along with three 200- to 500-Soldier ISBs at Yukon Training Area (YTA), Donnelly Training Area-West (DTA-West), and near Tanana Flats Training Area (TFTA).

Key Components:

- Constructing the ISBs within the training areas is being proposed to reduce travel time, increase safety, and increase available training time for Army units that need to conduct exercises within the various training and maneuver areas.
- The ISBs would support large-scale exercises and other training involving combinations of units, including Brigade Combat Teams, and functional brigades.
- Each ISB would include permanent barracks, parking areas, dining facilities, ammunition storage points, petroleum-oil-lubricant areas, maintenance facilities, and possibly airfields to transport, house, maintain, and stage Soldiers before insertion into surrounding combat training areas.
- They would also provide maintenance and logistics support while the units are away from main cantonment areas.
- Each ISB would require a site roughly between a 100 and 110-acres.

No Action: Taking no action would require the Army to continue the use of temporary "relocatable" ISB facilities that do not reflect real-world, deployed ISB scenarios.

Proposed Intermediate Staging Base Locations

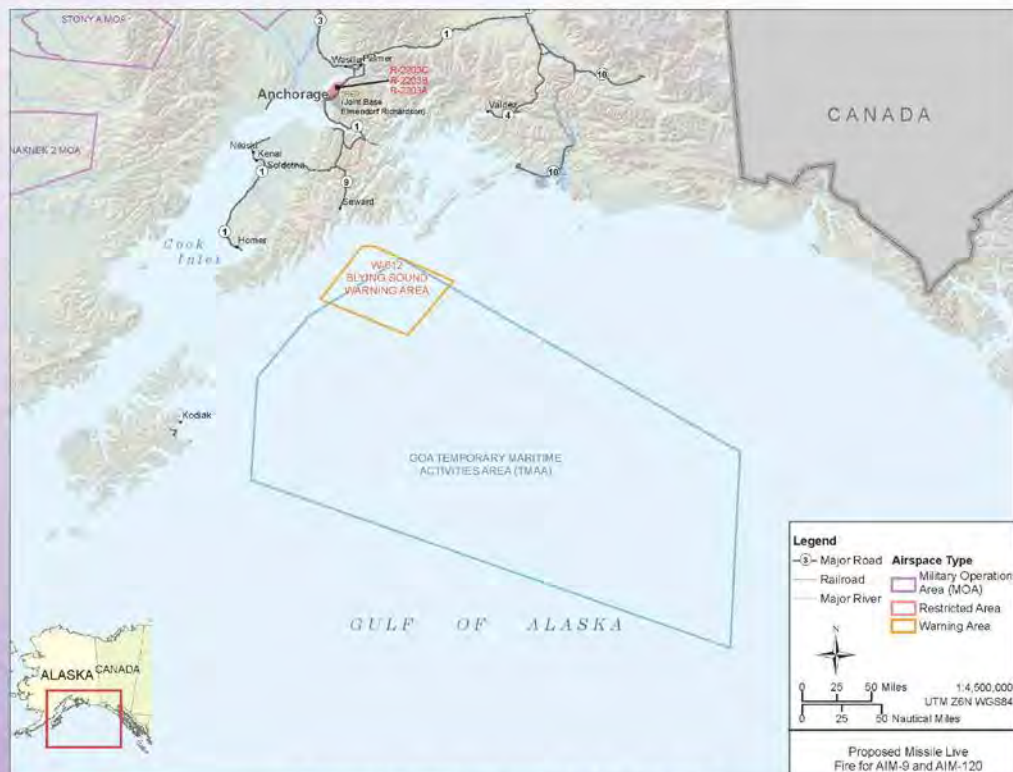

11 Programmatic Proposal: Missile Live Fire for AIM-9 and AIM-120

Proposed Action: Develop the existing Temporary Maritime Activities Area (TMAA) and Warning Area 612 (W-612) in the Gulf of Alaska (GOA) to support a fully instrumented range for live delivery of the AIM-9 and AIM-120 air-to-air missiles by Air Force fighter aircraft.

Key Components:

- Live ordnance delivery requires use of either restricted airspace with range target areas or a warning area of sufficient size to contain the explosive hazard areas associated with these missile systems. The existing TMAA and W-612 would provide the required airspace for these training activities.
- New instrumentation would be needed to control drones, radar, radio relays, and weapons telemetry and termination equipment in support of this training activity.
- Operations would be similar to but additional to those evaluated in the Navy's recent GOA EIS.
- The Air Force estimates that approximately 100 live-fire sorties with these systems would be conducted annually by the Air Force to meet training requirements.

No Action: Taking no action would not allow for a location within Alaska for the Air Force to conduct training with the AIM-9 and AIM-120 missiles as described in the proposed action. Other locations, such as Tyndall Air Force Base (AFB), Florida, may not prove to be cost effective, efficient, or timely in satisfying this training requirement.

Proposed Missile Live Fire for AIM-9 and AIM-120

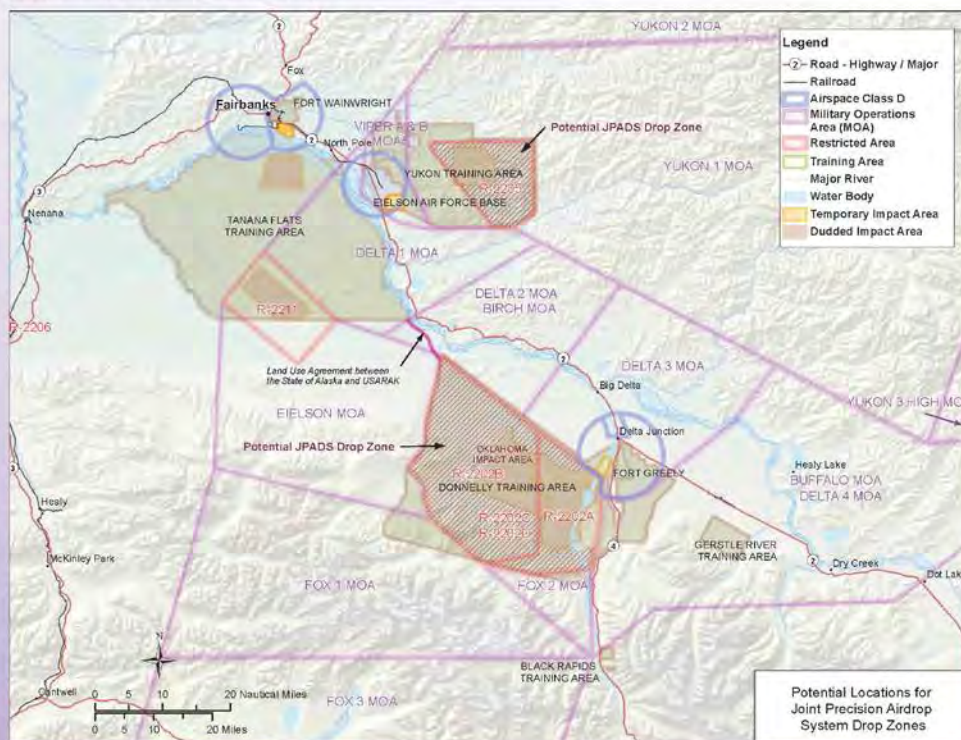

12 Programmatic Proposal: Joint Precision Airdrop System (JPADS) Drop Zones

Proposed Action: Establish JPADS drop zones as part of JPARC training exercises.

Key Components:

- JPADS is a GPS (global positioning system)-guided precision airdrop system designed to deliver supplies and equipment to ground forces.
- Restricted airspace would support JPADS drop zone training with a system of GPS receivers and steerable parachutes to support aerial resupply training under realistic and varied conditions.
- JPADS are dropped from large cargo aircraft such as the C-17 Globemaster and steered to a pre-determined landing/drop zone.
- Future project planning involves the identification of sites within existing JPARC restricted areas that can best accommodate the required surface danger zones (SDZs).
- A composite footprint must be centered within existing military restricted area and military land due to large zone exposed to potential surface hazards for this training exercise.
- Study areas under consideration for JPADS include R-2205 in Yukon Training Area (YTA) and R-2202 in Donnelly Training Area-West (DTA-West).

No Action: Taking no action would not provide the military with the capability to undertake JPADS training exercises, which is an important element of the overall JPARC concept of operations.

Comparative Analysis of Anticipated Environmental Impacts by Proposed Action and Resource Area

Generalized anticipated impacts are shown below for each proposed action in each resource area analyzed in the Draft EIS. Specific details regarding significance determinations associated with color ratings for each resource area are provided in Chapter 3. In some sections several sub-issues are discussed. For purposes of this summary, the greatest potential for impact is summarized along with non-discretionary mitigations.

COLOR KEY:												
No beneficial or adverse impact.												
Potential for adverse impact, but not significant; may require management actions or mitigations to avoid or reduce impacts.												
Potential for significant adverse impacts; Requires management actions or mitigations to avoid or reduce impacts.												
*NOTE: Analysis based upon available data. Actual impacts have not been evaluated and mitigations have not been identified for Programmatic proposals.												

How to Make Your Comments Count

Commenting on public policy issues or documents as a private citizen can be daunting, especially if the issues are technical. Consider the suggestions below to make it easier and more effective to participate in the National Environmental Policy Act (NEPA)/Environmental Impact Statement (EIS) process.

Offer ideas for issues to be considered or potential impacts to be evaluated.

Collect information on the issues, including laws, regulations, agency materials or guidance. Sign up for the project mailing list. Make a checklist of the issues you want addressed. Explain how proposed actions may affect you. Give examples. Tell what you do support as well as what you don't. Cover the following:

- Establish your authority to comment, whether it is as a concerned citizen, representative of an interest group, or an expert.
- For extensive comments, summarize your major concerns first, then describe them in detail.
- If you are recommending changes to a document, suggest specific language when possible.
- If you believe technical information contained in the EIS or other resource documents is in error or inadequate, cite the reference and explain why. Provide copies of back-up material.
- Offer solutions – draw on your expertise as an interested stakeholder to suggest innovative ideas.

If you are presenting your comments verbally, consider these format and style suggestions:

- Start by offering general or summary comments.
- Use headings, topic sentences, and short sentences.
- Avoid asking questions – rather, pose your questions as comments to be considered.
- Be respectful of your fellow commentators and agency representatives.

Finally, understand comment deadlines and processes.

During public hearings, verbal and written comments on the Draft EIS are considered equally. Substantive comments received by June 7, 2012 will be considered and responded to in the Final EIS.

Stay Updated.

For additional information, visit our website at www.jpisceis.com, or contact:

ALCOM Public Affairs

JBER, AK 99506
Phone: 907-552-2341; Fax: 907-552-5411

What Happened to Your Scoping Comments

- Public and government agency scoping input was presented to proposal proponents for review and considered.
- The comments provided EIS analysts direction as to where to focus the EIS analysis as well as information regarding potential impacts that had not been anticipated.
- Comments became part of the Administrative Public Record.
- The input assisted the EIS proponents in going back to proposals and looking at options resulting in new alternatives and changes to the proposals.

The following changes were made to the proposed actions as a result of public and agency scoping input:

- With respect to airspace designations, the Air Force proponent is now considering Alternative E that moves the southern boundary of the newly proposed Fox and Paxon Military Operations Areas (MOAs) to the north approximately 20 miles and responds to the following comments and concerns:

1. Potential noise impacts over Lake Louise.
 2. Potential impacts on civilian aviation access and transport of residents, tourist companies, back country users, campers, hunters, fishers, and recreational flyers in the Lake Louise area.
 3. Potential airspace management impacts on jet routes between Anchorage and Fairbanks.
 4. Numerous mining claims and potential for restricted access to claims.
- The Air Force proponent is no longer considering the Proposed Eielson Weapons Corridor for the proposed Realistic Live Ordnance Delivery proposal because of public and agency concerns regarding restricted public access to the land below. This alternative had proposed two separate weapons corridors: one located between existing restricted areas R-2211 and R-2202B and the other one to the south. The airspace corridors were proposed to be 10 miles in width and to extend from FL200 to FL600, as needed to accommodate the delivery altitudes of ordnance being delivered. The land underneath was proposed to have restricted access when the corridors were active. Due to the impacts expressed during scoping, this alternative is no longer being considered.
- The Army proponent is reexamining the Tanana Flats Training Area (TFTA) Roadway Access proposals as well as the Enhanced Ground Maneuver Space proposal as they received several concerns regarding potential impacts to hunting, recreation and subsistence use. ALCOM is utilizing public input to reconstruct these proposals, and before going forward with an environmental analysis for specific proposals, is seeking additional information on use and potential impacts from the proposals, including impact on private airfields and agencies, such as the Alaska Department of Fish and Game and the Alaska Department of Natural Resources.
- To reduce potential land and airspace restrictions outside of military lands, the restricted airspace for the R-2205/ Digital Multipurpose Training Range (DMPTR) is being reconfigured by Air Force and Army proponents to not propose any restricted land areas or airspace beyond current military lands.

M.4.3 Handout

Public Hearing National Environmental Policy Act (NEPA) Handout

What is the Joint Pacific Alaska Range Complex (JPARC)?

At present, the JPARC consists of all land, air, and sea training areas used by the Army, Air Force, Navy, and Marine Corps in Alaska. The military currently uses the JPARC to conduct testing, training, and to support joint exercises and mission rehearsals. The Army and Air Force, through Alaskan Command, are proposing to modernize and enhance the JPARC to enable realistic joint training.

Pursuant to the National Environmental Policy Act (NEPA), the Army and Air Force have prepared the *Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska (JPARC Modernization and Enhancement EIS)*. The Draft EIS analyzes potential environmental consequences associated with the JPARC enhancements that are reasonably foreseeable.

The JPARC modernizations and enhancements would provide adequate resources to enable the Services to train realistically and jointly for military personnel to succeed in their mutually supportive combat roles when exposed to situations faced in actual combat.

NEPA Notice of Availability and Draft EIS Review

NEPA is our national mandate for making informed decisions while considering environmental impacts. When Federal agencies propose projects having the potential to significantly impact the environment, NEPA requires the following process be undertaken as part of the planning process before final decisions are made:

- Evaluation and consideration of potential environmental consequences for proposals that may significantly impact the environment
- Consideration of public and government agency comment

Where the potential for significant environmental impacts exists, this evaluation is presented in an EIS.

The Draft EIS was filed with the U.S. Environmental Protection Agency and made available to interested parties in the spring of 2012. Notifications that the Draft EIS was published and available for review were distributed to the Federal Register, local media, and interested citizens. The Draft EIS:

- Identifies and describes the affected environment
- Evaluates the potential environmental consequences from a range of reasonable alternatives
- Identifies environmental permits and specific mitigation measures to avoid, minimize, or reduce environmental impacts if required

The Draft EIS is made available to the public and other agencies to comment on the analysis for a minimum of 45 days, as required under NEPA. Given the public and agency interest expressed during the scoping process, ALCOM has extended the comment period to 70 days.

For additional information, visit our website at www.jpisceis.com, or contact:
ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506
Phone: 907-552-2341; Fax: 907-552-5411

Public Hearing Agenda

Open House (45 min)

- Learn about the proposals and the Draft EIS
- Ask questions and identify issues
- Comment on the Draft EIS

Presentation (1 hour)

- Presentation on the proposals, NEPA process and environmental impacts

Formal Public Hearing and Public Testimony (2 hours)*

- Opportunity for the public to provide verbal comment to the court reporter

*Note this is not a question and answer session. The public is invited to have their questions responded to during the Open House portion of the hearing.

Proposed Actions

To meet this purpose and need and uniformed Service requirements, the JPARC Draft EIS encompasses twelve proposals shown on the map below. Each proposal includes a No Action Alternative, which would keep the affected training space in its current configuration, and would not allow DoD to meet the proponent Services' training requirements. For purposes of this EIS, the No Action Alternative serves as the baseline level of operations, representing the regular and historical level of training activity.

Definitive Proposals 1 through 6

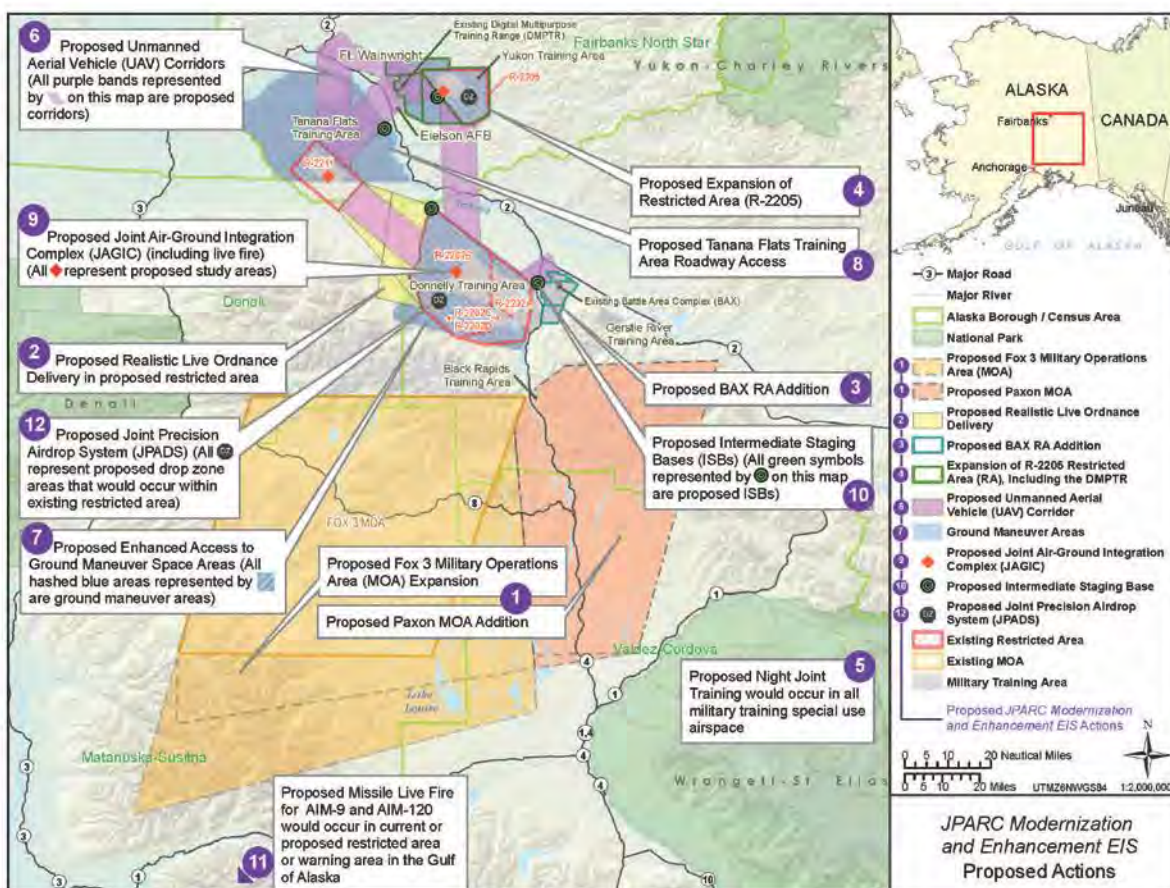

Six of the proposals are definitive action proposals, meaning they have sufficient definition to allow detailed EIS analysis and fully meet the following requirements:

- Specificity: Specific enough to analyze
- Dependence: Identified in the JPARC master planning process
- Definition: Fully defined (i.e., excludes capabilities not fully planned or programmed)
- Ripeness: Reasonably close to implementation (i.e., excludes actions requiring preceding projects, like bridges)

This EIS will serve to support the decision for this class of actions. Definitive decisions will be announced in the Record of Decision for this EIS. These decisions may incorporate specific measures identified in the analysis to reduce impacts.

Programmatic Proposals 7 through 12

The remaining six proposed actions need additional planning or are preceded by independent actions. These proposals are being analyzed programmatically with as much detail as is available in the JPARC Modernization and Enhancement EIS. Programmatic decisions require further definition and future environmental analyses once they are more fully defined or are closer to the time of implementation. The Draft EIS analysis and the comments received on these proposals will help identify siting criteria and measures to avoid the impact of future projects. Additionally, the Draft EIS identifies future data needs for these proposals.

Purpose and Need of the Proposed Actions

The U.S. Department of Defense (DoD) continues to face exceptional challenges to meet increasingly urgent national security needs. Under its current configuration, JPARC can no longer fully meet the training and testing requirements for forces stationed in, and exercises occurring in and near, Alaska. The purpose of the JPARC proposed actions is to modernize and enhance JPARC to correct this shortfall. JPARC modernizations and enhancements would enable realistic joint training and testing to support emerging technologies, respond to recent battlefield experiences, and train with tactics, techniques, and new weapons systems to meet combat requirements and national security needs.

Specifically, there are four trends driving the need to modernize and enhance JPARC:

- Technological advances in military equipment and systems
- Advances in combat tactics and techniques
- A continued need for diversified, efficient, and realistic training
- The need to maximize the utility of scarce resources and increase joint training through common infrastructure

Comparative Analysis of Anticipated Environmental Impacts by Proposed Action and Resource Area

Generalized anticipated impacts are shown below for each proposed action in each resource area analyzed in the Draft EIS. Specific details regarding significance determinations associated with color ratings for each resource area are provided in Chapter 3. In some sections several sub-issues are discussed. For purposes of this summary, the greatest potential for impact is summarized along with non-discretionary mitigations.

COLOR KEY:

No beneficial or adverse impact
Potential for adverse impact, but not significant; may require management actions or mitigations to avoid or reduce impacts
Potential for significant adverse impacts; Requires management actions or mitigations to avoid or reduce impacts

*NOTE: Analysis based upon available data. Actual impacts have not been evaluated and mitigations have not been identified for Programmatic proposals.

How to Make Your Comments Count

Commenting on public policy issues or documents as a private citizen can be daunting, especially if the issues are technical. Consider the suggestions below to make it easier and more effective to participate in the National Environmental Policy Act (NEPA)/Environmental Impact Statement (EIS) process.

Offer ideas for issues to be considered or potential impacts to be evaluated.

Collect information on the issues, including laws, regulations, agency materials or guidance. Sign up for the project mailing list. Make a checklist of the issues you want addressed. Explain how proposed actions may affect you. Give examples. Tell what you do support as well as what you don't. Cover the following:

- Establish your authority to comment, whether it is as a concerned citizen, representative of an interest group, or an expert.
- For extensive comments, summarize your major concerns first, then describe them in detail.
- If you are recommending changes to a document, suggest specific language when possible.
- If you believe technical information contained in the EIS or other resource documents is in error or inadequate, cite the reference and explain why. Provide copies of back-up material.
- Offer solutions – draw on your expertise as an interested stakeholder to suggest innovative ideas.

If you are presenting your comments verbally, consider these format and style suggestions:

- Start by offering general or summary comments.
- Use headings, topic sentences, and short sentences.
- Avoid asking questions – rather, pose your questions as comments to be considered.
- Be respectful of your fellow commentators and agency representatives.

Finally, understand comment deadlines and processes.

During public hearings, verbal and written comments on the Draft EIS are considered equally. Substantive comments received by June 7, 2012 will be considered and responded to in the Final EIS.

How to Submit Public Comments

Submit comments electronically at www.jpisceis.com or by mail before **June 7, 2012** to: ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506; Phone: (907) 552-2341; FAX: (907) 552-5411

There are numerous opportunities to be involved in the JPARC Modernization and Enhancement EIS process.

The EIS Timeline

- Opportunities for Public Involvement
- Where We Are Now

Your involvement and participation are essential to the EIS process.

COLOR KEY:

No forecasted or adverse impact

Potential for adverse impact, but not significant; may require management actions or mitigation to avoid or reduce impacts

Significant adverse impact, but not significant; may require management actions or mitigation to avoid or reduce impacts

NOTE: Analysis based upon available data. Actual impacts have not been evaluated and mitigation have not been identified for Programmatic proposals.

3

Joint Pacific Alaska Range Complex

Modernization and Enhancement Environmental Impact Statement

Purpose of the JPARC Proposals

Modernize and enhance JPARC for the units stationed in Alaska and to best support the exercises in and near Alaska

- Enable the Services to train both realistically and jointly
- Enable military personnel the best chance of success in their mutually supportive roles in actual combat

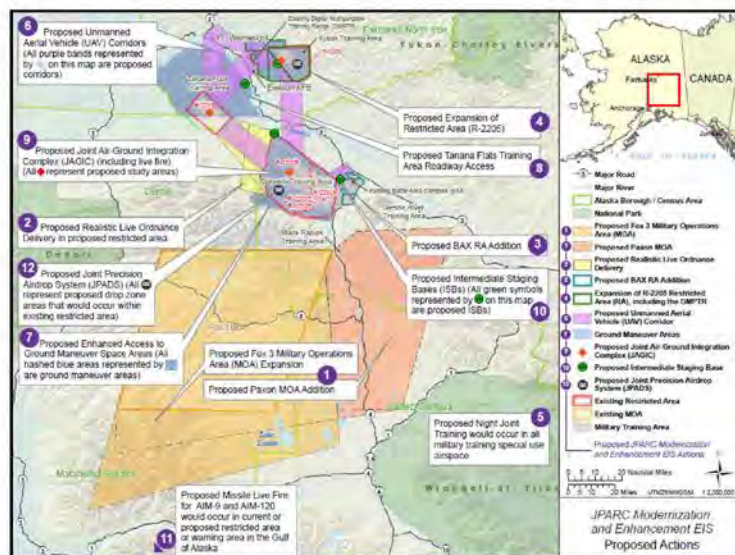

Need for the JPARC Proposals

Major national-level trends driving the need to modernize and enhance JPARC

- Technological advances in military equipment and systems
- Advances in combat tactics and techniques
- Lack of efficient, realistic training
- Maximize the utility of scarce resources and increase joint training through common infrastructure

4

JPARC Draft EIS Public Hearing Presentation

Joint Pacific Alaska Range Complex

Modernization and Enhancement Environmental Impact Statement

- **Criteria for Definitive Proposals**
 - **Specificity:** Action must be specific enough to analyze and not a general capability
 - **Dependence:** Action must be identified in the JPARC Master Plan, i.e. excludes maintenance, cantonment area requirements, etc.
 - **Definition:** Action must be fully defined, excludes capabilities that are needed but not fully planned or programmed
 - **Ripeness:** Actions must be reasonably close, excludes actions with preceding projects like access roads or bridges or actions that are not programmed
- **Six definitive JPARC EIS proposals**
 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA
 - Realistic Live Ordnance Delivery
 - Night Joint Training
 - Battle Area Complex (BAX) Restricted Area Addition
 - Expansion of Restricted Area R-2205
 - Unmanned Aerial Vehicle (UAV) Access

JPARC Draft EIS Public Hearing Presentation

Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA

Proposed Action:
Expand the Fox 3 MOA and establish a new, adjacent Paxon MOA to provide vertical and horizontal airspace required to accommodate low-altitude threat and multi-axis missions for fifth-generation fighters, reduce aircraft transit distances from JBER, reduce fuel use, and optimize training opportunities within this airspace.

Key Components:

- Expand existing Fox 3 MOA boundaries to the south and east
- Fox 3: Establish low altitude sector from 500' AGL up to 4,999' AGL
- Fox 3: Establish high altitude sector from 5,000' AGL to 17,999' MSL
- Paxon: Establish low altitude sector from 500' AGL up to 13,999' MSL
- Paxon: Establish high altitude sector from 14,000' MSL to 17,999' MSL
- Paxon low altitude sector only useable during MFES, up to 6 exercises per year (max of 60 days)

Alternative A – expand Fox 3 MOA and establish new, adjacent Paxon MOA with high and low-altitude sectors as depicted

Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA

Proposed Action:
Expand the Fox 3 MOA and establish a new, adjacent Paxon MOA to provide vertical and horizontal airspace required to accommodate low-altitude threat and multi-axis missions for fifth-generation fighters, reduce aircraft transit distances from JBER, reduce fuel use, and optimize training opportunities within this airspace.

Key Components:

- Expand existing Fox 3 MOA boundaries to the south and east
- Fox 3: Establish low altitude sector from 500' AGL up to 4,999' AGL
- Fox 3: Establish high altitude sector from 5,000' AGL to 17,999' MSL
- Paxon: Establish low altitude sector from 500' AGL up to 13,999' MSL
- Paxon: Establish high altitude sector from 14,000' MSL to 17,999' MSL
- Paxon low altitude sector only useable during MFES, up to 6 exercises per year (max of 60 days)

Alternative E – expand Fox 3 MOA and establish new, adjacent Paxon MOA with high and low-altitude sectors, but with southern border approximately 20-miles north of Alternative A depiction

JPARC Draft EIS Public Hearing Presentation

Realistic Live Ordnance Delivery

Proposed Action:

Establish a realistic air to ground training environment to accommodate the longer range delivery of live ordnance from new fighter aircraft.

Key Components:

- Expand R-2202 boundaries as required to contain airspace & controlled land areas for aircraft release of live ordnance on existing targets within the Oklahoma or Blair Lakes Impact Areas
- Targets must be located within existing diked or temporary impact areas
- Proposed altitudes would extend from the surface to an unlimited ceiling
- Maintain current R-2202 ordnance delivery schedule (90 to 150 days annually at a maximum of 5 hours daily, including RED FLAG-ALASKA flying periods)

Alternative B – Expand restricted airspace for live and inert ordnance delivery by linking R-2211 and R-2202

1.1

Realistic Live Ordnance Delivery

Proposed Action:

Establish a realistic air to ground training environment to accommodate the longer range delivery of live ordnance from new fighter aircraft.

Key Components:

- Establish new target area in northwest and southeast DTA for inert GBU-32 ordnance delivery
- Proposed new target areas classified as temporary impact areas, approximately 1 to 2 acres in size
- Only inert ordnance would be used on these targets
- Final siting of targets would be according to established procedures used by the USARAK and USAG-PWA Environmental Division working with the Air Force

Alternative A & B – Create new target areas in northwest and southeast DTA for inert GBU-32 delivery within existing boundaries of R-2202

1.2

JPARC Draft EIS Public Hearing Presentation

Realistic Live Ordnance Delivery: Potential Impacts and Proposed Mitigations

Resource	Realistic Live Ordnance Delivery
Airspace Management and Use	2.2.1
Noise	2.2.2
Safety - Flight	2.2.3
Safety - Ground	2.2.4
Air Quality	2.2.5
Physical Resources - Subjunctive Trust	2.2.6
Water Resources	2.2.7
Floodplains	2.2.8
Hazardous Materials & Waste	2.2.9
Biological Resources	2.2.10
Wetlands	2.2.11
Cultural Resources	2.2.12
Land Use - Land Management and Use	2.2.13
Land Use - Public	2.2.14
Land Use - Recreation	2.2.15
Infrastructure and Transportation	2.2.16
Socioeconomics	2.2.17
Subsistence	2.2.18
Environmental Justice	2.2.19

Preliminary Mitigations Under Consideration (not all inclusive)

- Implement airspace management mitigation efforts noted for Fox 3 MOA and New Paxon MOA proposal
- Implement/expand conservation, monitoring, and management procedures currently used for Oklahoma Impact Area
- Utilize inert target site selection that minimizes environmental impacts
- Augment existing efforts to identify munitions contamination at impact areas on Donnelly Training Area
- Restrict supersonic flight/flare use above specific altitudes
- Apply current MFE airspace seasonal restrictions
- Pursue funding for Special Use Airspace Information Services (SUAIS) communications enhancements

Complete description of proposed mitigations found in Draft EIS, Vol I, Chapter 3

13

Night Joint Training

Proposed Action:

Extend the flight training operating hours from 10:00 pm to 1:00 am local time to allow additional hours of darkness for more effectively completing night joint training requirements

Key Components:

- Both existing and proposed future SUA would be used to accommodate Air Force Night Training
- Identified noise-sensitive areas would continue to be avoided under the proposed action for extended night training hours
- Night ordnance use by the Air Force would occur during one RED FLAG exercise in a given year under the proposed action
- Lights out training would be performed under the same conditions/restrictions as currently apply to these operations

Alternative A - extend the JPARC Air Force flight operating hours to allow MFE tactical operations until midnight and landing by 1:00 a.m., local time, during March and October

Alternative B - extend the JPARC Air Force flight operating hours to allow all MFE and routine tactical training operations until midnight and landing by 1:00 a.m., local time, during all months of the year

14

Infrastructure and Transportation	3.5.16
Socioeconomics	3.5.17
Subsistence	3.5.18
Environmental Justice	3.5.19

Preliminary Mitigations Under Consideration (not all inclusive)

- Implement airspace management mitigation efforts noted for Fox 3 MOA and New Paxon MOA proposal
- Implement/expand conservation, monitoring, and management procedures currently used for Oklahoma Impact Area
- Utilize inert target site selection that minimizes environmental impacts
- Augment existing efforts to identify munitions contamination at impact areas on Donnelly Training Area
- Restrict supersonic flight/flare use above specific altitudes
- Apply current MFE airspace seasonal restrictions
- Pursue funding for Special Use Airspace Information Services (SUAIS) communications enhancements

Complete description of proposed mitigations found in Draft EIS, Vol I, Chapter 3

15

Battle Area Complex (BAX) Restricted Area Addition

Proposed Action:

Establish new restricted area over the BAX and Combined Arms Collective Training Facility (CACTF) of sufficient area to encompass hazardous activities and weapons footprints for munitions and ordnance fully supporting more realistic unit and joint training at the BAX.

Key Components:

- Establish a restricted area for hazardous activities within the existing Controlled Firing Area (CFA).
- Subdivide the restricted area laterally and vertically to activate only areas/altitudes required for different mission activities.
- BAX activities proposed in the lower-altitude layer below 6,000' MSL would occur approximately 60 percent of the training year.
- The proposed use would occur between 7:00 am and 7:00 pm local time with other times as stipulated by NOTAM.

Alternative A - Establish a restricted area subdivided into two sectors, R XXXXA (north) and R-XXXXB (south), with three altitude layers: surface up to 5,999' MSL; 6,000' to 17,999 feet MSL; and FL180 up to FL220.

16

JPARC Draft EIS Public Hearing Presentation

Battle Area Complex (BAX) Restricted Area Addition

Proposed Action:

Establish new restricted area over the BAX and CACTF of sufficient area to encompass hazardous activities and weapons footprints for munitions and ordnance fully supporting more realistic unit and joint training at the BAX

Key Components:

- Establish a restricted area for hazardous activities within the existing Controlled Firing Area (CFA)
- Subdivide the restricted area laterally and vertically to activate only areas/alitudes required for different mission activities
- BAX activities proposed in the lower-altitude layer below 6,000' MSL would be approximately 60 percent of the training year
- The proposed use would occur between 7:00 am and 7:00 pm local time with other times as stipulated by NOTAM

Alternative B - Establish a restricted area subdivided into three sectors: R-XXXXA (north), R-XXXXB (center) and R-XXXXC (south), three altitude layers: surface to 5,999' MSL; 6,000' to 14,999 feet MSL; and 15,000' MSL to FL220. Additional expansion would encompass both BAX and CACTF to meet current and future needs by including proposed new firing points and protective Surface Danger Zones (SDZ)

Battle Area Complex (BAX) Restricted Area Addition: Potential Impacts and Proposed Mitigations

Resource	Battle Area Complex Restricted Area
Airspace Management and Use	3.3.1
Noise	3.3.2
Safety - Flight	3.3.3
Safety - Ground	3.3.4
Air Quality	3.3.5
Physical Resources - Subsurface	3.3.6
Water Resources	3.3.7
Floodplains	3.3.8
Hazardous Materials & Waste	3.3.9

Land Use - Public Access	3.3.14
Land Use - Recreation	3.3.15
Infrastructure and Transportation	3.3.16
Socioeconomics	3.3.17
Subsistence	3.3.18
Environmental Justice	3.3.19

Preliminary Mitigations Under Consideration (not all inclusive)

- Implement airspace management mitigation efforts noted for Fox 3 MOA/New Paxon MOA and Realistic Live Ordnance Delivery
- Maintain/update appropriate Bird Aircraft Strike Hazard (BASH) programs
- Expand efforts to comply with existing service flight safety regulations
- Expand efforts to comply with existing range safety/control
- Publicize range bulletins highlighting range borders and safety information
- Expanding enforcement to control trespass
- Augment existing efforts to identify potential munitions contamination at impact areas

Complete description of proposed mitigations found in Draft EIS, Vol I, Chapter 3

JPARC Draft EIS Public Hearing Presentation

Expansion of Restricted Area R-2205

Proposed Action:

Expand restricted area R-2205 to include the existing Digital Multi-Purpose Training Range (DMPTR) and the Yukon Training Area (YTA) in order to provide sufficient area to encompass hazardous activities, increase more-realistic training, and better support joint training initiatives

Key Components:

- Expand the existing R-2205 restricted area from the surface up to FL310
- Revised boundary aligns the outer restricted area boundary with government controlled YTA lands to provide expanded protective airspace for hazardous activities
- Subdivide the expanded R-2205 into sectors (A through D) so as to activate only those sectors required to support hazardous mission and UAV flight activities
- Restricted area segments A and B would be used primarily for UAV activities
- The proposed use would occur between 7:00 am and 7:00 pm local time, Monday through Friday, with other times as stipulated by NOTAM

Action Alternative - Expand current R-2205 over the DMPTR and YTA, with restricted airspace from surface to FL310 and lateral segmentation as depicted

Expansion of Restricted Area R-2205: Potential Impacts and Proposed Mitigations

Resource	Expanded Restricted Area R-2205
Airspace Management and Use	3.4.1
Noise	3.4.2
Safety - Flight	3.4.3
Safety - Ground	3.4.4
Air Quality	3.4.5
Physical Resources - Subsurface Geology	3.4.6
Water Resources	3.4.7
Floodplains	3.4.8
Hazardous Materials & Waste	3.4.9
Biological Resources	3.4.10
Wetlands	3.4.11
Cultural Resources	3.4.12
Land Use - Land Management and Use	3.4.13
Land Use - Public Access	3.4.14
Land Use - Recreation	3.4.15
Infrastructure and Transportation	3.4.16
Socioeconomics	3.4.17
Subsistence	3.4.18
Environmental Justice	3.4.19

Preliminary Mitigations Under Consideration (not all inclusive)

- Continue coordination between FAA, Alaska Civil-Military Aviation Council, US Army Alaska Aviation Safety Standard Council, and other civil/military aviation forums
- Publicize Major Flying Exercises (MFEs) affecting airspace users
- Continue/expand overflight avoidance areas
- Continue/expand public information exchange procedures
- Continue limitations on number and allowable dates for MFEs
- Coordinate efforts with Alaska Department of Natural Resources and Bureau of Land Management to protect resources and land use
- Expanding enforcement to control trespass
- Update/expand maps available to the public on the US Army Alaska Recreation Tracking System website (USARTRAK)

Complete description of proposed mitigations found in Draft EIS, Vol I, Chapter 3

JPARC Draft EIS Public Hearing Presentation

Unmanned Aerial Vehicle (UAV) Access

Proposed Action:

Establish UAV transit corridors between JPARC airfields and restricted airspace to enable movement of UAVs between launch locations and joint training ranges

Key Components:

- Each of the depicted corridors is a separate action alternative
- Each proposed corridor would be between 5 and 8 nautical miles in width with a minimum altitude of 1,200' AGL
- Stratify transit corridors vertically to allow activation of only those altitude segments required to support transit of the applicable UAV types in use during training events
- UAV types/operations would adhere to FAA requirements, including Mode-C transponder and FAA-approved lighting
- Estimated UAV operations conducted twice weekly, up to four times per day during weekdays with other times by NOTAM

Alternative A - Establish corridors of restricted or other suitable airspace, as determined by the FAA, between JPARC airfields and restricted airspace training ranges

Alternative B - Establish a Certificate of Authorization (COA) for each UAV corridor

21

Unmanned Aerial Vehicle (UAV) Access

Proposed Action:

Establish UAV transit corridors between JPARC airfields and restricted airspace to enable movement of UAVs between launch locations and joint training ranges

Key Components:

- Each of the depicted corridors is a separate action alternative
- Each proposed corridor would be between 5 and 8 nautical miles in width with a minimum altitude of 1,200' AGL
- Stratify transit corridors vertically to allow activation of only those altitude segments required to support transit of the applicable UAV types in use during training events
- UAV types/operations would adhere to FAA requirements, including Mode-C transponder and FAA-approved lighting
- Estimated UAV operations conducted twice weekly, up to four times per day during weekdays with other times by NOTAM

Alternative A - Establish corridors of restricted or other suitable airspace, as determined by the FAA, between JPARC airfields and restricted airspace training ranges

Alternative B - Establish a Certificate of Authorization (COA) for each UAV corridor

- Continue coordination between FAA, Alaska Civil-Military Aviation Council, US Army Alaska Aviation Safety Standard Council, and other civil/military aviation forums
- Publicize Major Flying Exercises (MFEs) affecting airspace users
- Continue/expand overflight avoidance areas
- Continue/expand public information exchange procedures
- Continue limitations on number and allowable dates for MFEs
- Pursue funding for Special Use Airspace Information Services (SUAIS) communications enhancements
- Establish/expand existing VFR flyway corridors

Complete description of proposed mitigations found in Draft EIS, Vol I, Chapter 3

23

Programmatic Proposals

- Require further definition and tiered NEPA analysis prior to implementation
- JPARC Modernization and Enhancement EIS will identify environmental siting criteria/measures to avoid impacts for future projects
- Current efforts identify data needs for future analyses and likely permit and consultation requirements for each programmatic proposal

Six programmatic JPARC EIS proposals

- Missile Live Fire for AIM-9 and AIM-120
- Joint Precision Airdrop System (JPADS) Drop Zones
- Enhanced Ground Maneuver Space
- Tanana Flats Training Area (TFTA) Roadway Access
- Joint Air-Ground Integration Complex (JAGIC)
- Intermediate Staging Bases (ISBs)

24

JPARC Draft EIS Public Hearing Presentation

Missile Live Fire for AIM-9 and AIM-120

Proposed Action:

Develop the existing Temporary Maritime Activities Area (TMAA) and Warning Area 812 (W-612) in the Gulf of Alaska (GOA) to support a fully instrumented range for live delivery of AIM-9 and AIM-120 air-to-air missiles by Air Force fighter aircraft.

Key Components:

- Use of the GOA is described in *Gulf of Alaska Navy Training Activities Environmental Impact Statement/Overseas Environmental Impact Statement*.
- TMAA includes surface and subsurface operations areas and overlies a portion of W-612, is approximately 300 NM long by 150 NM wide.
- Proposed altitudes would extend from the surface to FL600.
- Instrumentation would be needed to control target drones, radar, radio relays, and weapon telemetry and termination equipment in support of this training activity.
- Estimate approximately 100 live-fire sorties with these systems would be conducted annually to meet training requirements.

Joint Precision Airdrop System (JPADS) Drop Zones

Proposed Action:

Establish JPADS drop zones as part of JPARC training ranges.

Key Components:

- JPADS is a GPS-guided precision airdrop system designed to deliver supplies and equipment to ground forces.
- Restricted airspace would support JPADS drop zone training with a system of GPS receivers and steerable parachutes to support aerial resupply training under realistic and varied conditions.
- JPADS are dropped from large cargo aircraft such as the C-17 Globemaster and steered to a pre-determined landing/drop zone.
- Study areas under consideration for JPADS include R-2205 in YTA and R-2202 in DTA-West.

JPARC Draft EIS Public Hearing Presentation

Enhanced Ground Maneuver Space

Proposed Action:

Provide expanded access to ground maneuver space and year-round accessibility in the Tanana Flats Training Area (TFTA), Donnelly (DTA), and Yukon (YTA) Training Areas

Key Components:

- Entirely ground-based proposal located within existing maneuver training areas in current Army Range Development Plan
- Supports at least battalion-size training events interacting with Joint, Interagency, Intergovernmental, and Multinational (JIM) components
- Training frequency planned to support seven combat maneuver battalions for a 10-day to 14-day event at least once per year, per battalion
- Includes construction of training roads and trails and some off-road vehicle operations throughout existing training areas in TFTA, DTA, and YTA

27

Tanana Flats Training Area (TFTA) Roadway Access

Proposed Action:

Roadway to provide year-round access into TFTA and the Blair Lakes Impact Area to enhance ground maneuver space

Key Components:

- Provide 35-foot-wide road with aggregate surface to allow side-by-side Stryker vehicle passage, access, and circulation
- New roadway supports year-round access to TFTA for up to 14 days per battalion, annually

28

JPARC Draft EIS Public Hearing Presentation

Joint Air-Ground Integration Complex (JAGIC)

Proposed Action:

Establish a digitally-integrated combat training complex for joint and combined arms live-fire training

Key Components:

- JAGIC would support combined arms live-fire exercises including fully integrated advanced ordnance fired by mechanized infantry and armor units
- Restricted area and MOA airspace is required to support JAGIC, and the range must adjoin an existing dudded impact area
- Study areas under consideration for the JAGIC include YTA, TFTA, and DTA
- Only one site will be selected for development during subsequent siting, design, and environmental analysis
- Development/construction includes target arrays with service roads, range support buildings, parking area, range tower, convoy live-fire route, urban centers, and an area for rocket training
- Total footprint is approximately 12x18km, with the target arrays, convoy live-fire route, and urban facilities concentrated in a 5x12km area within the range

29

Intermediate Staging Bases (ISBs)

Proposed Action:

Locate and construct a 1,000-Soldier ISB near the existing BAX, along with three 200- to 500-Soldier ISBs in the YTA, TFTA, and DTA.

Key Components:

- ISBs would support large-scale exercises and other training involving combinations of units, including brigade combat teams and functional brigades
- Includes permanent barracks, parking areas, dining facilities, ammunition storage points, petroleum-oil-lubricant areas, maintenance facilities, and possibly airfields
- Allows transport, housing, maintenance, and staging before insertion into surrounding combat training areas
- Each ISB would require a site roughly between 100 and 110-acres
- Siting would occur on existing lands withdrawn for military use

30

JPARC Draft EIS Public Hearing Presentation

Joint Pacific Alaska Range Complex
Modernization and Enhancement Environmental Impact Statement

NEPA and the JPARC Draft EIS

- NEPA is National Environmental Policy Act of 1969
- Starts with Purpose and Need (or "why")
- Reasonable alternatives must be considered and documented
- Range of alternatives narrowed by the Purpose and Need
- Decisions cannot be made until the end of the impact analysis
- Public and agencies must be given opportunity to review and comment
- Results in a decision that may become stale if not implemented in a timely manner
- Decision is called the Record of Decision (ROD) and is legally binding
- ROD may include specific mitigations to minimize potentially significant adverse impacts or to comply with applicable laws and regulations

Question & Answer

Concludes at
6:45 PM
(11:45 AM or 5:45 PM
in Fairbanks)

34

JPARC Draft EIS Public Hearing Presentation

Joint Pacific Alaska Range Complex
Modernization and Enhancement Environmental Impact Statement

Public Testimony
Written comments are given equal consideration

Verbal Testimony

- Speak clearly and slowly
- Do not provide private information, simply state name and organization, if applicable
- Four (4) minutes to speak, timekeeper will hold up yellow card when 30 seconds remain
- May turn in written statements along with testimony

JOINT PACIFIC ALASKA RANGE COMPLEX

Public Hearing

May 11, 2012

Anchorage, Alaska

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 P R O C E E D I N G S

2 (On the record at 5:50 p.m.)

3 COLONEL WARING: because there's been an intentional
4 five minute delay here since if you look at Google on your
5 iPhone it doesn't walk to you the door. It gets you to the
6 filming sequence that's all connected and you have to then know
7 where Lucy Cuddy Hall is perhaps. So I apologize for the extra
8 walk.

9 But my name is Colonel Houstoun Waring on behalf of
10 Lieutenant General Hogue, the Alaskan Commanding Manager.
11 Welcome you and thank you for coming to provide public comment
12 on the Joint Pacific Alaska Range Complex Draft Environmental
13 Impact Statement, that's the JPARC Draft EIS. That's one of the
14 main acronyms we'll be talking about as we go through this.

15 This is one of 10 public hearings that we're going to be
16 presenting throughout Alaska. So I hope you've had time during
17 the open house here in the front as well as an opportunity to
18 review the Draft EIS that was mailed out sometimes in a CD form
19 or in the books and that you've had a chance then to comment on
20 that analysis and the proposals that were in there.

21 The purpose here, of course, is that the JPARC
22 Modernization and Enhancement began a deliberate process in 2009
23 when Alaskan Command identified the need to make sure that the
24 armed forces have the opportunity to train jointly, to make sure
25 that they have interoperability together and that they optimize

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 the resources that they expend during that training.

2 So what we have tonight is the -- essentially where we are
3 in that process that began three years ago and the experts that
4 we brought with us who are standing at the boards that you had a
5 chance to hopefully interact with, but if not we're going to go
6 into some of the detail but it's not terribly exhaustive
7 explanation of each of the proposals before we get to that
8 opportunity for public comment so that you can understand what
9 each of the proposals is trying to focus in on and do.

10 So since we know you have an interest in that I'm going to
11 turn this briefing then over to Lieutenant Colonel Cabral,
12 Lieutenant Colonel Hunt. They are members of the Alaska
13 Command's training and exercise directorate and they will walk
14 you us then through the next series of explanations of each
15 proposal that's in the Draft EIS. Take it over (indiscernible).

16 LIEUTENANT COLONEL CABRAL: Thank you, Colonel Waring.
17 Over about the next 40 minutes Lieutenant Colonel Hunt and I
18 will be summarizing the JPARC Draft EIS purpose and need,
19 reviewing the proposed actions and alternatives and reviewing
20 potential impacts and proposed mitigations. We've got about one
21 hour to complete this presentation. Afterwards Colonel Orr, our
22 Judge Advocate, will describe the ground rules for the formal
23 public comment portion of this evening.

24 Our goal is to take 40 minutes or so, as I said, to review
25 the proposals and leave you about 20 minutes to ask a brief

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 question and answer session before we move on to the formal
2 portion of this evening. Tonight's really about hearing from
3 you. We really want to get your comments and hear what you
4 think and give you the best opportunity to participate in the
5 National Environmental Policy Act or NEPA process. Therefore,
6 to ensure we cover all the proposals I'd ask you to please hold
7 your questions until the end.

8 Next slide please. During the review of the proposals
9 some of our discussion will include a listing of the affected
10 resource areas with the anticipated environmental impacts. This
11 information is summarized on the chart that you see before you
12 which was also on the opening slides as you walked in the door
13 and can be found on page three of the NEPA handout for those of
14 you that picked those up. That's also available at the sign-in
15 table when we're complete from here. For those who are
16 following along, the medium and dark shaded areas represent
17 those resource areas with potential adverse impacts which may
18 require mitigation or management activities to reduce impacts.
19 Each of those boxes also contains a numerical reference to the
20 specific section of the Draft EIS which addresses the potential
21 impacts for the affected proposed action.

22 Next slide please. JPARC, as it currently exists,
23 includes all the military land ranges, maritime training areas
24 and airspace used for training, testing and exercises by
25 Department of Defense and -- Department of Defense units in

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Alaska. It's divided into these ranges, training areas, to
2 include restricted airspace and military operations areas, or
3 MOAs, associated with each of Alaska's military installations.
4 It also includes warning areas and temporary maritime training
5 space in the international waters off the Gulf of Alaska. Under
6 its current configuration JPARC can no longer fully meet the
7 need for training and testing of forces stationed in and
8 exercises occurring in and near Alaska. The purpose of the
9 JPARC proposed actions is to modernize and enhance JPARC to
10 correct this shortfall. JPARC modernization and enhancements
11 would enable realistic joint training and testing to support
12 emerging technologies, respond to recent battlefield experience,
13 enable realistic joint training and to train with the emerging
14 tactics and new weapon systems to meet national security needs.
15 Specifically four trends seen on the right hand slide -- side of
16 the slide ahead of you would be -- drive the need to modernize
17 and enhance the JPARC.

18 Next slide please. To meet this purpose and need the
19 JPARC EIS encompasses 12 proposals. For those of you who were
20 with us during public scoping last year you'll remember we
21 initially started out discussing 10. We have not added any new
22 proposals, but rather two of the proposed actions have been
23 broken out based on public comment because they were either
24 geographically separated or because we needed to better define
25 the specific environmental impacts. Breaking those two specific

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 actions into four resulted in the proposed battle area complex
2 or BACs restricted area addition, the proposed expansion of
3 restricted area R-2205. Those were originally referred to as
4 the Joint Combined Arms Live Fire proposal or JCALF.
5 Additionally, the enhanced ground maneuver space alternative was
6 separated from the Tanana Flats training area roadway access in
7 order to better define the environmental impacts for each. Of
8 the 12 proposals, seven involved changes of -- changes or
9 additions to special use airspace with no changes to the
10 associated control of underlying lands. Four of the proposals
11 are purely ground based and involve improvement to facilities or
12 ranges that are located on existing lands withdrawn for military
13 use. Only one of the proposals, realistic live ordinance
14 delivery.....

15 UNIDENTIFIED MALE: This one here?

16 LIEUTENANT COLONEL CABRAL: Involves changes to the use of
17 underlying surface lands which are not currently under military
18 control. The largest of the proposals are those that encompass
19 the military operations areas proposed for the Fox 3 expansion
20 and the new Paxon MOA.

21 MOAs are special use airspace designated to separate or
22 segregate nonhazardous but nonstandard military aviation from
23 civilian aircraft. MOAs are not in continuous operation, but
24 are activated as required for the duration of training or
25 testing activities and then are released back to the FAA for

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 normal airspace use. MOAs do not involve control of the lands
2 underlying the defined airspace boundaries.

3 Currently for each of the 12 proposals Alaskan Command has
4 not identified a preferred alternative. Additionally, no
5 decisions will be made on the proposals until after the
6 environmental impact analysis is complete. Each proposal does
7 include a no action alternative which would keep the training
8 space in its current configuration, but does not allow the DOD
9 to meet the proponent service's training requirements. For the
10 proposed -- for the purposes of the EIS each no action
11 alternative serves as a baseline level of operations and
12 represents the regular historic use of the training activity.
13 This baseline allows comparison of the proposed actions to the
14 known impacts of maintaining status quo. As we go through each
15 of the proposals please bear in mind that each of them includes
16 this no change alternative.

17 Next slide please. Of the 12 proposals six of them are
18 definitive, meaning they fully meet the defined requirements
19 seen on the top portion of the slide. Definitive actions will
20 be announced in the record of decision for this EIS. These
21 decisions may incorporate specific measures to reduce impacts
22 and this EIS will serve as the body of support for the decision
23 for this class of actions. The slide identifies each of the six
24 definitive proposals in the JPARC Draft EIS and we'll review
25 each of those in turn.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Next slide please. The first definitive proposal we'll
2 review is the expansion of the Fox 3 MOA and establishment of a
3 new adjacent Paxon MOA. This proposal expands the existing Fox
4 3 MOA seen here as this purple boundary. For map orientation,
5 Fairbanks is here to the north, Anchorage is to the south,
6 Glenallen is here. And it would expand the airspace to the
7 south and to the east. It would also segment the Fox 3 MOA into
8 two segments vertically with a low altitude sector from 500 feet
9 above ground level, or AGL, up to, but not including, 5,000 feet
10 AGL and a high altitude sector from 5,000 feet AGL up to, but
11 not including, 18,000 feet mean sea level or MSL. It would also
12 establish a new Paxon MOA adjoining also with a low and high
13 altitude sector. For the Paxon MOA the low altitude sector
14 would extend from 500 feet AGL up to, but not including, 14,000
15 feet MSL and a high altitude sector for Paxon would include
16 14,000 feet MSL up to, but not including, 18,000 feet. Of note,
17 that Paxon low altitude MOA would only be usable during major
18 flying exercises, or MFEs, such as Red Flag Alaska or Northern
19 Edge. The expanded MOAs provide the vertical and horizontal
20 airspace needed to better accommodate low altitude threats and
21 multi-axis mission training activities during JPARC exercises
22 and routine events. Routine training could occur year around in
23 both proposed MOAs, but, again, would be limited to the Paxon
24 high altitude sector under both alternative A and E. Again, to
25 stress that, Paxon low is only usable during MFEs up to six per

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 year for a maximum total of 60 days annually. Alternative A, as
2 depicted, remains essentially unchanged from the boundaries
3 presented during public scoping, excepting for the vertical
4 segmentation into high and low altitude sectors.

5 Next slide please. Alternatives B, C and D, which involve
6 various combinations of expanding, segmenting or retaining the
7 boundaries of the existing Fox airspace both laterally and
8 vertically, were considered but not carried forward after it was
9 determined they did not meet Air Force training requirements.
10 Alternative E, as an all new alternative, was designed based on
11 a combination of public comments and other government agency
12 coordination. It retains the same altitude segmentation into
13 high and low altitude sectors as described for alternative A,
14 but moves the southern boundary approximately 20 miles to the
15 north of where it was previously located.

16 Next slide please. For the Fox 3 expansion and new Paxon
17 MOA the affected resource areas which may require management
18 actions or mitigation to reduce impacts include airspace
19 management and use, noise, flight safety, air quality,
20 biological resources, land management and use, public access,
21 recreation, socioeconomics, subsistence and environmental
22 justice. Of these impacts airspace management, noise, flight
23 safety, land management, recreation and socioeconomics were
24 considered potentially significant. Preliminary mitigation
25 under consideration to reduce these impacts includes, but is not

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 limited to, continued coordination with the FAA and local civil
2 aviation interests and stakeholders through the Alaska Civil
3 Military Aviation Council or ACMAC, U.S. Army Alaska Aviation
4 Safety Standard Council and other civil military aviation forms,
5 continue to use media sources, websites and other means to
6 publicize MFEs and other events affecting airspace users,
7 continue and expand as necessary over flight avoidance areas and
8 public information exchange procedures, continue the existing
9 limitations on the number and allowable dates for MFEs, pursue
10 funding for communication enhancements necessary to expand
11 coverage of the Special Use Airspace Information Service or
12 SUAIS, establish or expand existing VFR flyaway corridors to
13 provide VFR transit through areas affected by high density
14 military flight activities and continue existing collective
15 flight safety programs by all services.

16 Next slide please. Our next proposal, realistic live
17 ordinance delivery, establishes an air to ground training
18 capability for live ordinance from increased standoff ranges.
19 It allows improved training to the capabilities of fifth
20 generation fighters, such as the F-22, and improved modern
21 munitions, including GPS guided weapons. The proposal expands
22 depicted restricted areas to the extent required to contain
23 airspace and controlled land areas for the aircraft release of
24 live ordinance on existing targets within either the Oklahoma
25 impact area or the Blair Lakes impact area. For map

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 orientation, here's Fairbanks, this is restricted area 2211 near
2 the Tanana Flats training area and this is restricted area 2202
3 also known as the Donnelly training area. The airspace
4 expansion would extend from the surface to an unlimited ceiling
5 with specific higher altitudes coordinated with the FAA to
6 encompass the requirements for individual mission events.
7 Anticipated scheduling for live ordinance delivery training
8 would be as currently exists for restricted airspace 2202,
9 approximately 90 to 150 days annually for up to a maximum of
10 five hours per day. This would include Red Flag Alaska training
11 events. Alternative A for this proposal as depicted expands
12 restricted airspace 2202 to the west in this light shaded purple
13 area. This expansion includes, as does alternative B, the DOD
14 would have to develop new means to secure the underlying ground
15 surface areas for the protection of non-participants during
16 training events. As these depicted lands do not currently fall
17 within DOD jurisdiction coordination is underway with other
18 government agencies to develop a means for temporarily ensuring
19 non-participatory persons are not on those lands and then
20 returning them to public use once training events are completed.

21 Next slide. Alternative B would meet the same events
22 described for alternative A, but would do so by connecting R-
23 2202 to R-2211 with a new restricted airspace under this area
24 depicted. Same considerations for control of underlying lands
25 would apply as described during alternative A.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Next slide. Changes to this proposal since scoping have
2 included adding an inert only delivery option to both
3 alternatives A and B by creating new impact areas and targets in
4 the northwest corner and southeast corner of the existing
5 Donnelly training area. These inert targets would allow for
6 scheduling flexibility within the training confines of R-2202
7 when those lands outside of the boundaries of current withdrawn
8 military lands could not be secured for training events. They
9 would not allow us to fully meet the requirements of live
10 ordinance training from increased standoff ranges, but would
11 allow some increase over training capability from current
12 levels. Three scoping alternatives were considered but not
13 carried forward due to regulatory restrictions, limits on the
14 creation of new duded impact areas and respect for private
15 property ownership of underlying lands.

16 Next slide please. For realistic live ordinance delivery
17 the affected resource areas which may require management actions
18 or mitigation to reduce impacts include airspace management and
19 use, noise, flight and ground safety, physical resources, water
20 resources, hazardous materials and waste, biological resources,
21 land management and use, public access, recreation,
22 infrastructure and transportation, socioeconomics, subsistence
23 and environmental justice. Of these impacts, airspace
24 management, physical resources, land management and use, public
25 access, recreation, socioeconomics -- and socioeconomics were

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 considered potentially significant. Preliminary mitigations
2 under consideration to reduce these impacts include, but are not
3 limited to; implement some or all of the airspace management
4 actions proposed for Fox 3 expansion; implement and or expand
5 all applicable conservation, monitoring and management
6 procedures currently used by Fort Wainwright in management of
7 the Oklahoma impact area; utilize inert target site selection
8 criteria that minimizes environmental impacts; augment existing
9 efforts to identify potential munitions contamination at impact
10 areas on the Donnelly training area; restrict supersonic flight
11 and flare use above specific altitudes to minimize impact; apply
12 current major flying exercise or MFE airspace seasonal
13 restrictions to the realistic live ordinance delivery operations
14 and continue to coordinate MFEs with local communities in
15 advance, as well as pursue funding for communication
16 improvements, where necessary, within the proposed special use
17 airspace.

18 Next slide. Under the night joint training proposal the
19 Air Force would extend flight training hours from 10:00 p.m. to
20 1:00 a.m. local time to allow additional hours of darkness to
21 complete night joint training requirements. The current 10:00
22 p.m. Air Force landing restriction coupled with the extended
23 calendar for daylight savings time from the Energy Policy Act of
24 2005 severely limits opportunities to complete night training
25 before 10:00 p.m. local. Both existing and proposed future use

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 airspace would be used to accommodate Air Force night training.
2 Additionally, existing noise avoidance plans for noise sensitive
3 areas would be continued during these later hour operations.
4 Ordinance employed at night by the Air Force would take place
5 during one Red Flag Alaska exercise annually as part of this
6 proposed action. Lights out training would continue using the
7 same conditions and restrictions as they currently apply to
8 these operations. This proposed action would not apply to U.S.
9 Army current night operations which would continue using their
10 existing operations plan and restrictions. Alternative A
11 proposes to expand the JPARC Air Force night operating hours to
12 allow MFE tactical operations until midnight with a land no
13 later than 1:00 a.m. local time during March and October. Night
14 MFES would typically occur up to 10 nights per year with the
15 maximum number of aircraft sorties at around 50 being somewhat
16 less than the typical daytime session of around 70 aircraft.
17 Alternative B proposes that JPARC Air Force operating hours
18 would be expanded to allow both MFE and routine tactical
19 training operations until midnight with a land no later than
20 1:00 a.m. time during all months of the year and for all
21 training of military users on the existing JPARC special use
22 airspace who require night flight training. One additional
23 scoping alternative was considered but not carried forward as it
24 limited nighttime operations to 11:00 p.m. with a land no later
25 than midnight time. Further analysis indicated it would not

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 meet training requirements.

2 Next slide. For night joint training the affected
3 resource areas which may require management actions or
4 mitigation to reduce impacts include airspace management and
5 use, noise, ground safety, biological resources, land management
6 and use and environmental justice. None of these impacts was
7 identified as potentially significant. Preliminary mitigations
8 under consideration to reduce these impacts include, but are not
9 limited to, those mentioned for the Fox 3 expansion and
10 realistic live ordinance delivery pertaining to airspace
11 management, noise, safety and air quality mitigation efforts.
12 Additionally, the Air Force would continue open lines of
13 communication with appropriate agencies and the local population
14 to ensure night training concerns or impacts are highlighted and
15 properly addressed.

16 At this time I'd like to turn the presentation over to
17 Lieutenant Colonel Hunt for definitive U.S. Army proposals.

18 LIEUTENANT COLONEL HUNT: Quick map orientation here.
19 This is Fort Greely and Allen Army Airfield center to the map.
20 To the west over here is the Donnelly training area and Oklahoma
21 impact area and the Richardson Highway running north and south
22 right through here. This proposal is the battle area complex or
23 what we call the BACs restricted area. The Army is proposing to
24 establish a new restricted area over the battle area complex or
25 the BACs. This proposal would establish a restricted area for

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 hazardous activities that cannot currently be performed within
2 the existing controlled firing area, including tactical live
3 fire operations and joint operations with supporting vehicles
4 and aircraft. The proposed area needs to be of sufficient size
5 to encompass hazardous activities and weapons footprints for
6 those munitions and ordinance required to fully support more
7 realistic joint training. Anticipated use would occur between
8 7:00 a.m. and 7:00 p.m. local time with other times as
9 stipulated by notices to airmen or NOTAMS for up to 242 training
10 days per year. The proposal would subdivide the proposed
11 restricted areas both laterally and vertically to activate only
12 those areas and altitudes required for different mission
13 activities. Alternative A, as depicted on the slide,
14 establishes a restricted area that is subdivided into two
15 sectors, north and south, with three altitude layers, as
16 depicted. So there's your northern sector here and your
17 southern sector here and the altitude vertical segmentation is
18 listed right down here. Surface to 5,999 MSL, from 6,000 to
19 17,999 feet MSL and from up to flight level 180 -- flight level
20 180 up to flight level 220.

21 Next slide please. Changes since public scoping resulted
22 in the creation of alternative B which establishes a restricted
23 area over both the BACs and the Combined Arms Collective
24 Training Facility or what we refer to as the CACTF. The CACTF
25 is located right here. The CACTF is a critical component of the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 proposed action as it replicates an urban environment. This
2 restricted area would be subdivided into three sectors, north,
3 center and south, with three altitude layers as depicted on the
4 legend here and also down here. This additional expansion would
5 meet current and future needs, but including proposed new firing
6 points and protective surface danger zones or SDZs.

7 Next slide. The affected resource areas which may require
8 management actions or mitigation to reduce impacts include
9 airspace management and use, noise, flight and ground safety,
10 biological resources, cultural resources, land management and
11 use, public access, recreation, infrastructure and
12 transportation and environmental justice. Of these impacts
13 airspace management and use was considered potentially
14 significant. Preliminary mitigations under consideration to
15 reduce these impacts include, but are not limited to, those
16 mentioned in the -- for the Fox 3 MOA expansion and the
17 realistic live ordinance delivery pertaining to airspace
18 management, maintaining and updating appropriate bird aircraft
19 strike hazard or BASH programs, expanding efforts to comply with
20 the existing service flight safety regulations as well as a
21 range of safety and control, publicizing range bulletins,
22 highlighting range borders and safety information, expanding
23 enforcement to control trespass for the expanded operations and
24 augmenting existing efforts to identify potential munitions
25 contamination and impact areas.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Next slide. Our next definitive proposal is the expansion
2 of the restricted area R-2205 and the overall boundary of the
3 Yukon training area or what we refer to as as the YTA. So
4 here's the Yukon training area right in here. This is Eielson
5 Air Force Base and Stewart Creek impact area right here in the
6 middle. This proposal extends the existing R-2205 restricted
7 area from the surface up to flight level 310 to more fully
8 encompass DOD controlled lands in the YTA. The restricted
9 airspace would be subdivided into sectors A through D, A sector
10 here, B sector here, C sector here and D sector here, so as to
11 activate only those sectors required on an individual basis to
12 support hazardous missions and unmanned aerial vehicle flight
13 activities. The training and exercise activities to be
14 performed within support of the expanded airspace would be
15 similar in nature as for the BACs CACTF proposed action
16 alternatives and activities. Since public scoping we have
17 revised the action alternative to eliminate restricted airspace
18 which extended outside of the military controlled lands which is
19 located in the northeastern sector right up here. The revised
20 alternative confines the restricted area to airspace overlying
21 existing withdrawn military lands, provides the additional
22 protected airspace required to support hazardous activities and
23 weapons footprints for the types of munitions and ordinance to
24 be used within the area. The proposal only includes this one
25 action alternative and, like all of the proposals, a no action

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 alternative.

2 Next slide. The affected resource areas which may require
3 management actions or mitigation to reduce impacts include
4 airspace management and use, noise, ground safety, hazardous
5 materials and waste, biological resources, land management and
6 use, public access, restrict -- recreation, infrastructure and
7 transportation, socioeconomic and environmental justice. None
8 of these impacts were identified as potentially significant.
9 Preliminary mitigations under consideration to reduce these
10 impacts include, but are not limited to, airspace management,
11 mitigation efforts previously noted, continuing to coordinate
12 efforts with Alaska Department of Natural Resources and the
13 Bureau of Land Management to protect resources and land use,
14 expand enforcement to control trespass into the YTA and updating
15 and expanding maps available to the public on the U.S. Army
16 Alaska recreational tracking system website, also known as
17 usartrak.

18 Next slide. The unmanned aerial vehicle or UAV access
19 proposal would establish suitable airspace to provide transit to
20 training areas in support of joint operations like those
21 currently performed in a combat environment. For map
22 orientation, this is Fairbanks right here, Tanana Flats training
23 area, Eielson Air Force Base and farther down to the southeast
24 Fort Greely and the Donnelly training area. These UAV corridors
25 are required to establish a means of transit for all service

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 UAVs for main operating bases to the various JPARC ranges until
2 the FAA determines and publishes a means for integrating manned
3 and unmanned aircraft. Since public scoping we've revised the
4 language in the Draft EIS alternative A to now read a corridor
5 of restricted or other suitable airspace as determined by the
6 FAA. This revised language reflects DOD policy that UAVs are
7 not considered a hazardous activity. Thus, restricted airspace
8 is likely not the solution, but we have a need of means of
9 identifying and for studying the environmental impacts moving
10 forward. This revised language allows us to continue EIS
11 analysis on this proposal while we await an FAA decision on
12 integrating UAVs into the national airspace structure. In the
13 depicted corridors here on the slide and down here towards Fort
14 Greely going to the DTA all FAA requirements for UAV operations
15 would be met to include being outfitted with mode C transponders
16 and approved lighting. Each proposed corridor would be between
17 five and eight nautical miles in width with a minimum altitude
18 of 1,200 feet AGL and these corridors now include a vertical
19 segmentation which is a change from what we had presented
20 previously during public scoping. The vertical segmentation's
21 reflected here on the slide, your ground down here, and think of
22 this as three tubes of air versus a curtain of air, more of
23 corridors of air. The corridors with proposed altitudes of up
24 to 17,999 feet MSL would be segmented into three altitude layers
25 allowing use of only those altitudes required for a specific UAV

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 type or mission. UAV operations would be conducted between 7:00
2 a.m. and 7:00 p.m., Monday through Friday, with other times as
3 stipulated by NOTAM. As mentioned on the last slide,
4 alternative A proposes establishing new restricted areas or
5 other designated airspace for each UAV corridor identified in
6 the proposed action. Alternative B proposes establishing a
7 certificate of authorization or COA for each UAV corridor
8 identified in the proposed action. For unmanned aerial vehicle
9 access the affected resource areas which may require management
10 actions or mitigations to reduce impacts include airspace
11 management and use, noise, flight and ground safety, air
12 quality, socioeconomic and environmental justice. Of these
13 impacts airspace management and use was considered potentially
14 significant. Preliminary mitigations under consideration to
15 reduce these impacts include, but are not limited to, all the
16 applicable airspace management mitigation efforts noted
17 previously.

18 Next slide. The following proposals listed here require
19 additional planning prior to implementation. These six
20 programmatic proposals require further definition and future
21 environmental analysis. The Draft EIS analysis and the comments
22 received on these proposals will help identify siting criteria
23 and concerns so your inputs are very important. Additionally,
24 the Draft EIS identifies future data needs for these proposals.
25 Because the six depicted proposals are not fully defined the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 environmental analysis completed for the Draft EIS is based only
2 upon the current available data. Thus, actual impacts have not
3 been evaluated and mitigations have not been identified. As
4 such, we will limit our discussion of programmatic actions to a
5 description of the proposed action alternatives. For those
6 interested, the available analysis data is summarized in chapter
7 three of the Draft EIS. Just as for the definitive proposals,
8 each includes a no action alternative. Lieutenant Colonel
9 Cabral will begin this portion of our review with a summary of
10 the Air Force's programmatic proposals.

11 LIEUTENANT COLONEL CABRAL: Our first programmatic
12 proposal is for the Air Force to establish a fully instrumented
13 range for the delivery of AIM-9 and AIM-120 air to air missiles
14 by Air Force fighter aircraft in the existing temporary maritime
15 activities area and warning area 612. Live ordinance delivery
16 requires the use of either restricted airspace with range target
17 areas or a warning area of sufficient size to contain the impact
18 and explosive hazard associated with these missile systems. The
19 existing temporary maritime activities area and warning area 612
20 would provide the airspace required for these training events.
21 In order to execute this proposal new instrumentation would be
22 needed for radar, radio relays, weapons telemetry and to control
23 target drones. Operations would be similar to, but in addition
24 to those described in the Navy's 2011 Gulf of Alaska EIS. The
25 Air Force estimates approximately 100 live fire sorties would

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 take place annually under this proposed action. There have been
2 no changes made to this proposal since public scoping.

3 Next slide please. Our next proposal is to establish
4 Joint Precision Air Drop System, JPADS, drop zones within the
5 JPARC. JPADS uses steerable parachutes paired with GPS
6 receivers to precisely deliver supplies and equipment to ground
7 forces. JPADS are dropped from large cargo aircraft such as the
8 C-17 and are steered to predetermined landing drop zones.
9 Restricted airspace would support JPADS drop zone training under
10 realistic and varied conditions. Future project planning
11 involves the identification of sites within existing JPARC
12 restricted areas that can best accommodate the required surface
13 danger zones or SDZs. Study areas under consideration for JPADS
14 include restricted area 2202, or the Donnelly training area, and
15 restricted area 2205, Yukon training area. There have been no
16 changes made to this proposal since public scoping.

17 Lieutenant Colonel Hunt will now describe the U.S. Army's
18 programmatic proposals.

19 LIEUTENANT COLONEL HUNT: The first Army proposal here for
20 programmatic is enhanced ground maneuver space. Map
21 orientation, this is Fairbanks and Fort Wainwright. Right up
22 here to the south is the Tanana Flats, YTA, DTA down here, to
23 the east of that Fort Greely and Delta Junction. This proposal
24 provides expanded access to ground maneuver space and year
25 around accessibility to the Tanana Flats training area, the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Yukon training area or the Donnelly training area. The expanded
2 access to ground maneuver space would provide internal
3 circulation routes within those training areas. The proposal is
4 entirely ground based and is located within existing military
5 lands. It includes construction of roads, trails and some off-
6 road vehicle operational areas. The proposal would support at
7 least battalion size training events. The training frequency is
8 planned to support up to seven combat maneuver battalions for a
9 10 to 14 day event at least once per year per battalion. The
10 proposal includes roads capable of supporting units outside of
11 the hazard footprints from aerial ordinance or indirect fire and
12 the road network siting would optimize access to and from future
13 intermediate staging bases, existing cantonment areas and main
14 roadways.

15 Next slide. The Tanana Flats or TFTA access road would
16 improve access into the Tanana Flats training area and the Blair
17 Lakes impact area. Since public scoping we have taken the roads
18 off the map, but generally reflect where the Tanana River bridge
19 crosses here and would proceed in this direction south,
20 southwest towards the Blair Lakes impact area. This proposal
21 would provide for a 35 foot wide road surface sufficient for
22 side by side striker vehicle entry, passage and circulation in
23 the training area. The new roadway would support year around
24 access and training in the TFTA for up to 14 days per battalion
25 annually. Since public scoping this proposal was separated from

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 the preceding enhanced ground maneuver space description to
2 better distinguish the environmental impacts of each initiative.

3 Next slide. The next proposal is the Joint Air Ground
4 Integration Complex. This proposal would establish a digitally
5 integrated combat training complex for joint and combined arms
6 live fire training. This would allow the Army combined arms
7 capabilities to train with Air Force, Navy, Marines and special
8 operation forces to perform air to air and air to ground mission
9 activities. This proposal would restrict -- this proposal
10 requires restricted and MOA airspace and must adjoin an existing
11 duded impact area under consideration. Sites suitable include
12 are in the TFTA, the YTA and the DTA. Only one site would be
13 selected. And the symbol here indicates the Joint Air Ground
14 Integration Complex. One of those locations would be selected.

15 Next slide. The Army is proposing to locate and construct
16 a 1,000 soldier intermediate staging base or what we call an ISB
17 near the BACs along with three 200 to 500 soldier ISBs in the
18 TFTA, YTA and the DTA. And the little red hexagon is the symbol
19 of that proposed ISB at those locations indicated there.
20 Constructing the ISBs within the training areas is being
21 proposed to reduce travel time, increase safety and increase
22 available training time for units conducting exercises within
23 the various training and maneuver areas. The ISBs would support
24 large scale exercises and other training involving combinations
25 of units. Each ISB would include a permanent barracks,

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 maintenance and logistic support areas while units are away from
2 their main cantonment areas. It is estimated that each ISB
3 would require a site roughly between 100 to 110 acres and would
4 be built on existing military lands.

5 Next slide. What we've given you is just a very brief
6 summary of the Draft EIS and a listing of associated impact
7 areas and our currently proposed mitigations. The development
8 of management actions and mitigations is an ongoing process and
9 our primary reason for being here tonight is to record your
10 comments and allow us to continue developing these actions. I
11 emphasize the fact that this is only a draft document and we
12 need your assistance to continue refining the material. The
13 Draft EIS was prepared by Alaskan Command to comply with the
14 National Environmental Policy Act or NEPA. The Draft EIS
15 represents compliance with NEPA and is an important part of
16 Alaskan Command's overall commitment to environmental
17 stewardship. To date government agencies, elected officials,
18 tribes, community and environmental organizations and
19 individuals have all submitted comments at the scoping meetings
20 or provided written comments through the scoping process and
21 period. The comments received were considered instrumental in
22 revising the proposals and preparation of the Draft EIS. This
23 Draft EIS is a result of extensive analysis and consideration of
24 public and agency comments received during the scoping period.
25 Your inputs here tonight can only help make it better, but this

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 is not your only opportunity to get involved in the process.

2 Slide. Alaskan Command is committed to keeping citizens
3 informed throughout the NEPA process. In addition to holding
4 these public hearings we have established a website at
5 jparceis.com to make it easy for you to find and review
6 environmental documents. Right there at the top of the slide.
7 The Draft EIS is posted on the website as well as additional
8 information in the JPARC fact sheets available here tonight.
9 You may also review a hard copy of the Draft EIS by visiting one
10 of the 12 public libraries listed here on this slide.

11 Next slide. Alaskan Command is in the fourth stage in
12 this diagram of the EIS timeline highlighted down here in the
13 bottom left of your screen, providing the Draft EIS for public
14 comment and review. This phase is an essential part of the NEPA
15 process because it allows the public to review the Draft EIS and
16 comment on the analysis of potential environmental affects. We
17 encourage you to provide your input here tonight or by June 7th
18 to ensure it is considered for incorporation into the final EIS.
19 Comments on the Draft EIS may be provided orally or in writing
20 here tonight or by fax, internet or by mailing in comments. All
21 comments received will be considered of equal weight.

22 Next slide. We'd like to answer any questions you may
23 have regarding the proposals presented here tonight. As a
24 reminder, the most important portion of this public hearing will
25 be the formal comment portion to follow. So I would ask you to

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 please ask only brief questions for clarification on the
2 presented proposals. If you have a statement on the proposals
3 we encourage you to sign up and provide your comments in
4 accordance with the ground rules which will follow this brief
5 question and answer session. We'll attempt to answer your
6 questions as best we can in the time allotted, but we must end
7 this session at 6:50 p.m. in order to move into a formal comment
8 portion of the hearing. Thank you for your participation.

9 COLONEL WARING: And again, since we began five minutes
10 late we're happy to extend that to 6:50 so that we can ensure we
11 give you the full allotted time for questions. Again, looking
12 at trying to briefly clarify before we give you a chance to tell
13 us what you think on the record. So if there are any questions
14 we'd like to try to field those. Yes, ma'am.

15 UNIDENTIFIED FEMALE: Two questions. On the programmatic
16 proposals. Since the analysis is not complete are you going to
17 go through that analysis and then send out another Draft EIS?
18 How -- since you're saying it's not complete, you're interested
19 in comments, but procedurally under the EIS process.

20 COLONEL WARING: The question is for the programmatic
21 proposal since we stated that the environmental analysis is not
22 complete will we be doing a separate analysis later and then
23 incorporating that into the final document. For the answer to
24 that question I'm going to ask Lou Maslyk who is our contractor
25 NEPA expert to provide his answer.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 MR. MASLYK: Yes, ma'am. Is it on?

2 UNIDENTIFIED FEMALE: (Indiscernible).

3 MR. MASLYK: In answer -- can you hear? Yeah.

4 COLONEL WARING: Lou, you want to come up here?

5 MR. MASLYK: Yeah, sure. In answer to your.....

6 COLONEL WARING: Right here, right here.

7 MR. MASLYK: Oh. In answer to your question, ma'am, under
8 Air Force implementing guidelines of National Environmental
9 Policy Act programmatic actions are basically undertaken to get
10 the ball rolling as they say, to get the -- each action started
11 and the most -- the way they undertake the programmatic actions
12 is is that once they become more ripe for decision making, once
13 funding becomes more available, once the process has been more
14 defined, then an additional NEPA action, whether it would be an
15 environmental impact statement or an environmental assessment,
16 will be undertaken to finalize the project. But it will be part
17 of the overall JPARC EIS that we use additional -- or the
18 existing information from which to launch their next NEPA
19 process. So does that answer your question? Oh, I'm sorry.

20 UNIDENTIFIED MALE: Follow on question. Go ahead, ma'am.

21 UNIDENTIFIED FEMALE: I'm not quite following. On the
22 mitigation proposals that were presented are you required to
23 mitigate just for your -- probably your most significant? Your
24 three colors, the deep purple (indiscernible). How about that
25 next group, whatever it is?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 COLONEL WARING: The question is for our proposed
2 mitigations based on the chart which we have shown for the
3 affected resource areas. Of the three colors the lightest color
4 is the one which per the key identifies that there will be no
5 adverse affects. The mid and dark colors are those which have
6 impacts which may require management actions or mitigations, the
7 darkest of them being those which are potentially significant
8 adverse impacts. We are required, even for that mid level, to -
9 - that there may be potential management actions or mitigation
10 steps which we have to take once we get through the final
11 analysis. So effectively those -- that mid-shaded and the dark
12 shaded colors are both in the category of potentially requiring
13 management actions or mitigations to reduce impacts.

14 MR. MASLYK: Can I answer?

15 UNIDENTIFIED MALE: Yep.

16 MR. MASLYK: But if I may, ma'am, I could add to that.
17 The first step that we try to do is first of all when we
18 identify impact we try to first avoid them. Then we try to --
19 if there are impacts then we try to minimize them, but if
20 they're definitely adverse, long term or direct impacts, then
21 you do have to undertake an actual mitigation which could take
22 many different forms of either compensation or -- you know, but
23 that's definitely mitigation. So that's how the process works.

24 UNIDENTIFIED FEMALE: Are there any trails or recreational
25 areas that are going to be affected by any of these proposals?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Because there's some trails in these areas, but I'm just
2 wondering if any are going to be affected or restricted,
3 (indiscernible) use them. There's hunting in these areas. So
4 I'm just wondering if there's going to be any type of access
5 control or any change for people that use this area.

6 COLONEL WARING: The question is, is there going to be any
7 trails or surface recreational areas, hunting regions, which are
8 going to be impacted by the proposals such that they would
9 restrict access. The -- it's a complicated question only
10 because we're talking about such a wide range and if you look to
11 each of the specific proposals it can tell you that. In
12 general, however, all of the proposals, of those the ones that
13 are talking about airspace only. For example, the largest
14 geographic ones are the military operations areas and the MOAs.
15 That affects only airspace. So those that affect only airspace
16 will involve no restriction of surface access at all. So none
17 of the trails or hunting areas that you talk about would be
18 affected by the MOAs. For the restricted areas, with the
19 exception of the realistic live ordinance delivery proposal,
20 most -- all of the other restricted areas align with the
21 boundaries of currently withdrawn lands for military use. So
22 the access into those areas, some of them there is publicly
23 accessible lands during times when training is not available.
24 Other areas, like the impact areas, are always closed and
25 obviously that's for safety of the general public for areas

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 where there could be potential unexploited ordinance.

2 UNIDENTIFIED FEMALE: And I'm sorry, that's correct,
3 that's already....

4 UNIDENTIFIED MALE: Those are existing....

5 COLONEL WARING: That's correct, those are already
6 existing restrictions. It's only the realistic live ordinance
7 delivery proposal that includes potentially restricting surface
8 access during times when training events are occurring.

9 UNIDENTIFIED FEMALE: And do you have a list of trails or
10 recreation areas that would be affected in that area?

11 COLONEL WARING: In chapter three of the EIS it gives a
12 summary of the land use underlying those areas. Because they're
13 relatively large it's hard for me to say exactly what is
14 underneath those. But, again, in chapter three there's some
15 charts that go through in pretty good detail what those land use
16 are. I don't know off the top of my head if there are any
17 particular trails. We'd have to look more closely at that and
18 after we're done this evening we have somebody we can certainly
19 sit down and look at that with you closely if you'd like.

20 UNIDENTIFIED FEMALE: Thank you.

21 UNIDENTIFIED MALE: (Indiscernible).

22 UNIDENTIFIED MALE: Go ahead, sir.

23 UNIDENTIFIED MALE: Well, just out of curiosity, if those
24 fires -- if you want to -- we could call them afterburners.
25 (Indiscernible) the afterburners both at the same time 15

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 seconds how many gallons of fuel do they burn?

2 LIEUTENANT COLONEL CABRAL: Okay. The question was is if
3 we -- for a -- I assume you're talking a twin engine fighter,
4 sir?

5 UNIDENTIFIED MALE: Yeah, full thrust (indiscernible).

6 LIEUTENANT COLONEL CABRAL: Okay. For a twin engine
7 fighter if you were to throw them both into afterburner how many
8 gallons of fuel would you be talking about. I can't answer that
9 question sp....

10 UNIDENTIFIED MALE: In 15 seconds.

11 LIEUTENANT COLONEL CABRAL: In a 15 second timeframe. I
12 can't answer that question, sir, specifically because we have a
13 wide range of twin engine fighters that fly out on the JPARC and
14 their specific fuel consumption is going to vary from aircraft
15 to aircraft very widely. And so I can't provide an answer to
16 that question at this point. Yes, sir.

17 UNIDENTIFIED MALE: I'm going to voice a concern but I'm
18 not too sure it's appropriate but it might not be accepted in a
19 statement I think. But I would just like to see you bring the
20 latest in technology on board. My understanding is, is moving
21 to all (indiscernible) cells, electric -- a lot of electric
22 (indiscernible) coming on board quickly and I would just like to
23 see you use as your primary status for funding of anymore
24 economy fluctuations occur I'd just like to see you put the full
25 weight to some of this tremendous tech -- you know that.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 There's a cornucopia of new technology now first and I'd just
2 like to see you make that a priority status and make it
3 available to the community so the -- and the challenge in
4 isolated areas in which we live our children will be able to
5 stay up in the forefront of that and I think it would benefit us
6 all and I think that it should have priority because of such a
7 large mass. I don't want to make the case for you, I just want
8 you to keep it in mind.

9 LIEUTENANT COLONEL CABRAL: Yes, sir. We really
10 appreciate the comment. I will ask that to make sure that we
11 can fully capture that when we're done with this portion of Q
12 and A if you can make that comment on the record or if you're
13 not comfortable making that we have certainly someone who could
14 take a written statement for you so we can make sure we capture
15 those concerns. But we do appreciate those inputs. Yes, sir.

16 UNIDENTIFIED MALE: Just out of curiosity I'd like to ask
17 unusual questions. You can classify them any way you want to.
18 But do you have any relationship to HAARP or (indiscernible) are
19 some of my more suspect associates. But.....

20 LIEUTENANT COLONEL CABRAL: Yeah.

21 UNIDENTIFIED MALE:(indiscernible) operation
22 (indiscernible) with HAART just for the record and.....

23 LIEUTENANT COLONEL CABRAL: The question is, is does any
24 our proposals with the JPARC Draft EIS have any association to
25 the HAARP. I assume you mean the High Altitude Atmospheric

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Research Project, sir?

2 UNIDENTIFIED MALE: I think that's what they call it.

3 LIEUTENANT COLONEL CABRAL: Yes. There are none of the
4 proposed actions that have any affiliation with the HAARP.

5 HAARP is an Air Force research program that does take place in
6 northern Alaska, but we are not affiliated with any of the HAARP
7 operations nor do any of the proposed actions involve any
8 changes or modifications to HAARP activities.

9 UNIDENTIFIED MALE: I've been through NORAD Cheyenne
10 Mountain (indiscernible) 30 years ago. Do you have any type of
11 underground commands that are like that in existence now? Are
12 you proposing one that will show up in an EIS? Do you have that
13 on your agenda?

14 LIEUTENANT COLONEL CABRAL: The question is do we have any
15 underground facilities, command and control facilities like
16 those found at Cheyenne Mountain at NORAD down in Colorado. And
17 at this point in time there is not a underground controlled
18 facility here in Alaska and that is not part of any of the
19 proposed actions in the JPARC Draft EIS.

20 UNIDENTIFIED MALE: Then I -- well, I just got to ask
21 these questions here. I don't want to bring up chem trails, but
22 in relationship to something along that nature of the
23 questioning all fuel expends some type of a burn outflow.
24 Sometimes you drop fuel, but in low altitudes I think the fuel
25 at least doesn't all burn. I'm not sure what the scientific

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 descriptions of it are. Your -- those tremendous reoccurrence
2 of flights over the same path area (indiscernible) the unburned
3 fuel.

4 LIEUTENANT COLONEL CABRAL: The question is regarding both
5 fuel dumping by military aircraft and the burning of fuel which
6 would -- obviously some of those burnt fuel particulates end up
7 in the exhaust from participating aircraft. The question is do
8 we have a way of measuring that. Is that correct, sir?

9 UNIDENTIFIED MALE: The accumulation of it.

10 LIEUTENANT COLONEL CABRAL: Is there an accumulation. The
11 answer to your question is that yes, there is, and yes, air
12 quality is one of the resource areas. If you look back to what
13 we showed on one of the earlier slides, that chart includes a
14 resource area for air quality and identifies what its
15 anticipated impact level will be for each of the 12 JPARC
16 proposals.

17 UNIDENTIFIED MALE: (Indiscernible).

18 LIEUTENANT COLONEL CABRAL: Yes, and as pointed out, it's
19 the fifth.....

20 UNIDENTIFIED MALE: Fifth one down.

21 LIEUTENANT COLONEL CABRAL:fifth one down from the
22 top.

23 UNIDENTIFIED MALE: So that'd be the accumulated --
24 accumulation of the unspent fuel is naturally -- and the flight
25 trail (indiscernible)?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

37

1 LIEUTENANT COLONEL CABRAL: Yes, sir. If you look in
2 chapter three it will give you a complete definition of what the
3 considerations are for air quality, but what you are talking
4 about is part of the air quality discussion that we have in the
5 Draft EIS.

6 LIEUTENANT COLONEL HUNT: Anybody else have any other
7 questions?

8 UNIDENTIFIED MALE: I have one question. Does JBER have a
9 noise policy after 10:00 o'clock? For the housing areas.

10 LIEUTENANT COLONEL CABRAL: The question is, is does JBER
11 have a noise policy after 10:00 p.m. for the housing areas. Can
12 I ask for a little bit more clarification as to what you're
13 asking, sir?

14 UNIDENTIFIED MALE: Is there a policy on base that you
15 cease and desist after 10:00 o'clock like the city of Anchorage
16 has?

17 LIEUTENANT COLONEL CABRAL: I'm not sure I follow the
18 question still.

19 LIEUTENANT COLONEL HUNT: You mean noise coming from the
20 installation off, not in the actual housing area itself, on the
21 installation.

22 UNIDENTIFIED MALE: In the housing areas themselves.

23 LIEUTENANT COLONEL CABRAL: That -- no, sir, they -- the
24 way -- the current Air Force restrictions on night training that
25 exist in the airspace are for us to cease and desist night

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 training for those events that would be occurring out in the
2 airspace. So some of the other operations that take place right
3 around the air field, those are scheduled in accordance with the
4 local base regulations and at this point you're -- we're
5 probably exceeding the knowledge depth for myself. We have a --
6 yeah, we can get you an answer to that question probably through
7 our public affairs folks here a little bit later.

8 LIEUTENANT COLONEL HUNT: I'm making sure I'm -- we
9 understand the question correctly. You're talking about any
10 noise coming from the Joint Base Elmendorf Richardson or any
11 noise.....

12 UNIDENTIFIED MALE: Not any noise, just in the housing
13 areas they have -- like the city of Anchorage has an ordinance
14 you can't do anything after 10:00 o'clock because you're going
15 to disturb your neighbors.

16 LIEUTENANT COLONEL HUNT: Sure, yeah. I think I
17 understand the question a little bit better. It's not specific
18 to flight or military noise, but noise in military housing areas
19 on Joint Base Elmendorf Richardson. I know there is a Garrison
20 Commander's policy on that. I don't specifically know what that
21 is, but we can find out that information and have Captain Bryant
22 get you the details on it.

23 LIEUTENANT COLONEL CABRAL: At this point I'd like to
24 welcome Colonel Waring up to close out.

25 COLONEL WARING: Okay. Thank you for the -- hopefully we

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 had an opportunity to at least clarify some of the things that
2 you have questions about because the next thing we look forward
3 to is the formal comment period on any of the proposals, the
4 analysis that was done, to make sure that what we capture are
5 the meaningful comments that you have so that we can analyze
6 things correctly. Because we -- I -- the more I listen the more
7 I realize that we have a lot of the same questions or concerns
8 that we look at this correctly and with the eyes that take care
9 of the resources we've been given. So we're going to take a
10 momentary break here. We're going to let Colonel Orr then
11 present the opportunity for the formal comment period to get
12 started and once that's done then we'll (indiscernible). So are
13 we ready then, Colonel Hunt, for a break? So.....

14 UNIDENTIFIED MALE: Colonel Orr.

15 LIEUTENANT COLONEL CABRAL: We're going to introduce
16 Colonel Orr first.

17 COLONEL WARING: Okay. Should we go ahead and -- okay.
18 Colonel, you want to come on.....

19 COLONEL ORR: I'll come.....

20 COLONEL WARING:you want to stay over there or you
21 want to come up here?

22 COLONEL ORR: I'll come over here. Sorry.

23 COLONEL WARING: Okay. Thank you. So Colonel Orr has
24 joined us from D.C. He's going to be here with us through the
25 first half of our public hearing session in Alaska.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 COLONEL ORR: Thank you, Colonel Waring. My name is
2 Colonel Bill Orr and I'm a Judge Advocate in the United States
3 Air Force. As Colonel Waring stated, I will be the presiding
4 officer for this public hearing on the Draft Environmental
5 Impact Statement. Now this hearing is held in accordance with
6 the provisions of the National Environmental Policy Act
7 regulations that are published by the Council on Environmental
8 Quality and corresponding Air Force regulations on environment
9 planning.

10 The purpose of this hearing is to receive public comments,
11 that is your comments on the Draft Environmental Impact
12 Statement commonly referred as the Draft EIS. Before receiving
13 your comments I'd like to explain my role in this hearing. I am
14 a full-time Chief Judge of the United States Air Force Court of
15 Criminal Appeals and I'm located at Joint Base Andrews near
16 Washington, D.C. I'm not assigned or connected with the Alaskan
17 Air Command -- or Alaskan Command and I'm not involved in the
18 Joint Pacific Alaska Range Complex planning or proposals. I
19 normally preside over the appeals of military members who are
20 tried by trials by court martial, but I've been requested to
21 preside over these hearings to support the public review and
22 involvement process. I'm not here to act as a legal advisor to
23 the Army or Air Force representatives of this proposal. My role
24 in presiding as officer is to simply ensure that we have a fair,
25 orderly and impartial hearing and all who wish to be heard have

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 a reasonable opportunity to speak. In summary, it's important
2 that you understand that I will be serving as an impartial
3 moderator for this hearing.

4 Your input and comments are important. The environmental
5 process analysis assures that the public has opportunities to
6 review the analysis and provide comments for the record. The
7 comments will ensure that the decision makers will have the
8 benefit of your local knowledge and are aware of your concerns
9 about the environmental analysis for the EIS before they decide
10 on a course of action. Alaska Command, the Army and Air Force
11 representatives are here to accept your comments, but will not
12 respond to them at this time. Public comments will be reviewed
13 and considered and addressed in the final EIS.

14 Comments on issues unrelated to the EIS or be -- please
15 fill out a speaker request card and turn it in to a staff person
16 if you haven't already done so. Every speaker, including public
17 officials and organizational spokesmen -- spokespersons and
18 private individuals will have four minutes each to provide his
19 or her comment which is being transcribed by the court reporter.
20 I will call speakers in the order in which they signed in with
21 electr -- officials having the opportunity to speak first. No
22 electronic presentations will be permitted, although Alaska
23 Command encourages you to submit them as part of the public
24 written record.

25 We will now take a short break and that will allow you to

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 make public comment if you have not already done so. We will
2 reconvene at 10 after 7:00 and begin taking public comments.

3 THE REPORTER: Off the record 6:53 p.m.

4 (Off record at 6:53 p.m.)

5 (On record at 7:10 p.m.)

6 THE REPORTER: On the record, 7:10 p.m.

7 COLONEL ORR: All right. As I stated earlier, the hearing
8 is scheduled to end an hour from now so that'll make it 8:10.
9 So I'm asking everyone's cooperation in limiting your initial
10 comments to four minutes so that all who wish to have the
11 opportunity may speak and the facility -- while this facility is
12 available to us. Now if you don't feel comfortable standing up
13 to make a statement I remind you again that you can submit a
14 written comment form using the forms. And you can also submit
15 comments until 7 June and keep in mind that written comments are
16 given the same consideration as verbal comments that are offered
17 here tonight.

18 Now to ensure that we get an accurate record of what you
19 have to say I need you to help me just a little bit by
20 respecting these ground rules. First, speak slowly and clearly
21 into the microphone and state only your name and organization
22 you represent, if that applies. Please do not provide any other
23 personal information such as your home address or phone number.
24 Your oral comments will be reported by the court reporter
25 verbatim and used to develop a transcript and permanent record

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 of this meeting and will be published as a final part of the
2 final EIS. The names of the individuals making comments, as
3 well as their comments, will be disclosed in the final EIS.
4 Personal home addresses and phone numbers will not be published.

5 Second, each person should -- will be allotted four
6 minutes to speak and in order for each individual to have the
7 full time allotted on each member please be respectful of the
8 opinions offered by your neighbors. If you anticipate your
9 comments will extend beyond the time allotted please make the
10 most important comments first.

11 Third, if you have prepared a written statement you may
12 turn it in at the registration table or you may read it out loud
13 if you can do so within the time limit.

14 Fourth, please honor any request that I make that you stop
15 speaking when you have reached the four minute time limit. The
16 timekeeper will hold up a yellow card when you have 30 seconds
17 left to assist you in knowing when your allotted time is almost
18 up so that you can comfortably conclude your remarks. When the
19 red card is displayed that means your four minutes are up and in
20 the interest of politeness and fairness to the others who wish
21 to speak the speaker is asked to stop and then return to his or
22 her seats.

23 We are now ready to begin. The first speaker is Mr.
24 Gregory Razo and he's representing the Cook Inlet Region,
25 Incorporated. And I'm not sure if that microphone amplifies,

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 but that's okay because it records. So what -- so that'll go
2 into the recording as you like. So you may proceed.

3 MR. RAZO: Good evening. My name is Gregory Razo. I work
4 as a Vice President at Cook Inlet Region, Incorporated. Our
5 company calls itself CIRI. We are the regional Alaska Native
6 corporation for Southcentral Alaska headquartered here in
7 Anchorage. We also are delegated the tribal authority for the
8 Anchorage region.

9 In general our company has had an opportunity to review
10 the Joint Pacific Alaska Range Complex proposal and Draft EIS.
11 We believe that the Joint Pacific Alaska Range Complex allows
12 for unprecedented training opportunities for our war fighters
13 that are not found in any other region of the United States and
14 we encourage the development of the JPARC process.

15 We think that in terms of the work done to date with
16 regard to the six definitive proposals they have adequately
17 addressed the specificity, dependence, definition and ripeness
18 requirements of the EIS and in particular with regard to the
19 programmatic proposals we strongly support programmatic proposal
20 eight, nine and 10 which deal with the proposed Tanana Flats
21 training area roadway access, the proposed joint air ground
22 integration complex and the proposed intermediate staging bases.

23 In reviewing the anticipated environmental impacts from
24 the JPARC proposal we are happy to see that there is determined
25 to be little impact on the subsistence uses of the affected

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 areas. Subsistence is very important to the Alaska Native
2 people and the ability to access those resources which have been
3 the resources of our people for thousands of years should be
4 maintained and not impacted by the JPARC proposal.

5 Additionally, I think that with regard to the socio and
6 economic impacts of the JPARC proposal that the Department of
7 Defense should also consider not just the adverse impacts, but
8 the substantial positive impacts that development of
9 particularly the programmatic proposals that I mentioned
10 previously will have for job opportunity and training and
11 workforce development, particularly for our Alaska Native
12 people. Those regions that are going to be affected by the
13 JPARC development are areas of high unemployment where there is
14 little opportunity for work and the work that would be
15 associated with this proposal would be good work for our people.

16 For all of those reasons Cook Inlet Region, Incorporated,
17 supports this Draft EIS. Thank you.

18 UNIDENTIFIED MALE: Thank you.

19 COLONEL ORR: Next we'll have comments from Mr. Terry
20 Carter (sic).

21 MR. CARTEE: Cartee.

22 COLONEL ORR: Cartee?

23 MR. CARTEE: Yes.

24 COLONEL ORR: Apologize.

25 MR. CARTEE: First I'd like to clarify that the MOA only

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 separates the military traffic from the IFR traffic. VFR
2 traffic can fly in the MOAs unrestricted.

3 I've been out in the MOAs during hunting season and had
4 sonic booms, I've had airplanes come over me at 250 feet or
5 less, and I feel the Paxon addition at 500 feet AGL in a major
6 corridor, VFR corridor, between Gulkana and Greely, Fairbanks,
7 is a hazard and a major safety hazard to light airplanes and to
8 the military aircraft using it. At 250 knots they have no
9 reaction time at that altitude and a lot of the VFR traffic do
10 not have transponders so they will not be able to see them.

11 And the lowering of the Fox 3 from 5,000 feet down to 500
12 over a major hunting and recreational area is another major
13 safety hazard as that is altitudes that all the light planes use
14 from about surface to about 5,000, 3,000 feet. So lowering it
15 from 5,000 down to 500 feet is just asking for an accident to
16 happen. And that's all I have.

17 UNIDENTIFIED MALE: Thank you, Mr. Cartee.

18 COLONEL ORR: All right. Those are all the cards I have
19 for speakers that have signed up. Is there anyone else that --
20 I have some more coming here. Mr. Paul D. Kendall.

21 MR. KENDALL: I forget your name, I apologize.

22 COLONEL ORR: Bill Orr.

23 MR. KENDALL: Pardon?

24 COLONEL ORR: Bill Orr.

25 MR. KENDALL: Bill, Mr. Orr.....

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 COLONEL ORR: Yes.

2 MR. KENDALL:or Colonel Orr or.....

3 COLONEL ORR: That works too.

4 MR. KENDALL: Mr. Orr. Mr. Orr, name is Paul, middle
5 initial D, Kendall. I'm from Alaska and I came to your meeting
6 tonight to kind of wedge something in because I'm not articulate
7 and learned enough to really understand the EIS like some of the
8 professional members of my community.

9 I'm an energy activist. This is a business card I'd like
10 to give into the record and also a list of links and these links
11 represent a new energy design that is now expected to come
12 online within the next six to 18 months. Most of you know it as
13 cold fusion. What, should I just hand this to somebody or.....

14 UNIDENTIFIED MALE: Yes.

15 MR. KENDALL: Oh, all right. You'll be looking at
16 something called an E cat, energy catalyzer, by Mr. Rossi and
17 they're getting what they call COP, coefficients of performance
18 or production. They're six to 30 times the energy out that they
19 put in. They're suggesting that these units can run for six
20 months under temperatures of 1,500 degrees Celsius on five grams
21 of hydrogen and about 55 grams of nickel and they produce zero
22 pollution. They can also drive a five KW electrical unit at the
23 same time. Scientists are now talking the time has come to
24 where oil pipelines, there's no need for those or power lines.
25 They're talking about energy that can be looped. When you can

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 loop energy it's infinite. And if that weren't enough, another
2 competitor came out with a 45 KW unit which will run for a year
3 and a half on a limited amount of hydrogen and nickel. And if
4 that weren't enough, last week a company by the name of
5 Brillovin, which you can find on pesn.com out of Berkeley,
6 proposes that they have found a frequency which separates these
7 subatomic particles and you can run a boiler in Nome, Alaska for
8 three years on a quart of water. And if you bring that same
9 boiler -- and that's with no gas lines attached to it. And if
10 you bring that same boiler to Berkley you can run it for 20
11 years.

12 And the reason I bring this to you folks tonight is that
13 we have a coal fire power plant in Healy. They're about to fire
14 that plant up on coal and I would think with your funding and
15 your leading edge technology as defenders of which there's a DIA
16 document on that list which refers to this as the greatest
17 potential transformation of the U.S. battlefield forces since
18 the change from horses to gasoline. I would suggest that you
19 intervene as quickly as you can and go into that coal fire power
20 plant with these units which produce tremendous amounts of
21 energy when hooked in sequence. And if that weren't enough, we
22 think the U.S. Navy has purchased one of these small shipping
23 containers that can generate about 15 to 30 KW in electricity.
24 Once it kicks itself off it makes its own energy.

25 And I realize some of these things sound preposterous, but

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 the chief scientist at NASA has weighed in on this. Stanford
2 Research Institute has validated some of the tests, Los Alamos
3 Laboratories. Some of the most renowned names around the world
4 are now coming online with this, including the Royal Society of
5 Swedish People out of Switzerland, and even they made the
6 comment that Mr. Rossi is credible. There are now six companies
7 vying to come online with a residential unit within the next six
8 to 18 months. And the Swedish scientist said they don't -- the
9 design is credible, they had a big press conference, but they
10 don't understand what it's doing, how it's doing or anybody that
11 does. This is something transformational, what we call, it's
12 almost a metamorphosis of this society. They think they will
13 move through a world production covering the market within three
14 years at the max 25 percent of the world houses with these
15 devices. They are suggesting the military and the DIA document,
16 they're referring to this as disruptive technology. They're
17 saying that this has up to 10 million times the energy per unit
18 of chemical mass of anything we're using on the planet today.

19 I have never seen anything unfolding quite like this in my
20 lifetime. I do think it has a tremendous amount of credibility,
21 but you should see the scientists arguing. You have a chance
22 here with your military operation to be a part of our community
23 to help build that new society almost overnight in a great and
24 wondrous land with many challenges and I think it could play a
25 historical role. And you can't -- surely can't let the Navy get

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 ahead of you with one of these units without you knowing it.

2 And thank you very much.

3 COLONEL ORR: All right. Anyone else?

4 (Pause)

5 UNIDENTIFIED MALE: He's asking if he can comment twice.

6 Are -- if you're complete with your initial.

7 COLONEL ORR: Anyone else? All right.

8 MR. KENDALL: Well, I'm not sure when I've had the
9 opportunity to do this before in my lifetime. I've been in lots
10 of places here, but I am going to seize the opportunity.

11 I think that you need to understand something, ladies and
12 gentlemen, and this is why this is very important. Our society
13 is founded on energy. And in regards to this EIS I have to tie
14 this into here if you'll give me a moment to construct this, but
15 even though the EIS looks to find harmony and your society is
16 chasing money, but there isn't a creature in the universe that
17 eats the money. It's all an after energy moment and I think
18 that it is imperative that you add the energy consideration in
19 this EIS. And when you look at the constructs of that energy
20 you will find that most of it, if not all of it, is hydrogen
21 based.

22 So I'm trying to wedge something in here as best I can in
23 your EIS. It would seem to me the fact that you don't have this
24 included in your EIS is a profound statement about the lack of
25 connection in a properly formed society. And to make an example

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 of that so that you understand the relevance of that, your
2 children do not drink a glass of water. That is an ancient
3 term, it is a primordial term, it is a tricked up term or a
4 sling term. You drink hydrogen and oxygen and when you drink
5 that your body makes electricity, it fires you up. You come
6 online, onboard with synaptic impulses and then you hunt carbon
7 to form frame and hair and infrastructure. And when you begin
8 to realize that you begin to realize the connection. There's no
9 such thing as gasoline. It's hydrogen, pop and carbon. There's
10 no such thing as diesel. It's hydrogen, pop and carbon.
11 There's no such thing as jet fuel. It's hydrogen, pop and
12 carbon. Every creature out there in the universe, ladies and
13 gentlemen, is a transportation system that is specialized in
14 this design. All of those designs are fired by hydrogen living
15 in harmony with its hydrogen. And for you to have an EIS
16 without a hydrogen reference point to the impact of all those
17 things. Anything that's consuming hydrogen, generating a
18 current and altering its mass most likely has a state of being
19 of which we have not recognized in our evolution yet. But when
20 this new cold fusion comes online you're going to find whole new
21 economies and the reason you will is they will not be able to
22 use fuel to be able to give foundation to the dollar. And if
23 you have energy you can tool up, tech up, light up, arm up,
24 transport, communicate, grow food, you are a creature with a new
25 mindset and a new set of priorities and that will evolve your

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 society. And to see an EIS in a magnitude of outlay of this in
2 such a credible body of -- there are so few credible bodies of
3 commentary anymore that are not talking and dodging points that
4 to see such a credible body as our military of which we have
5 conveyed the greatest hope and trust in not have an EIS
6 reference I think is -- needs to be addressed as a concern in
7 your next EIS.

8 And I think without getting -- doing some kind of sideshow
9 up here I should probably sit down and thank you for the
10 opportunity. I just can't stress enough that our societies are
11 going to be based upon energy and as complex and as cascading as
12 the problems are nest -- now that have become nested problems
13 with the proper amount of energy you can hold your family secure
14 while we take five to 10 years to settle these problems out.
15 You cannot do that with money, ladies and gentlemen. You cannot
16 eat the gold, you cannot eat the silver, you cannot eat the
17 money. Those are false constructs of pursuits which disconnect
18 you from understanding that all around you it is the wonders of
19 the universe which was our mission and we lost that mission.
20 And you are about to see that transform almost overnight if
21 these units come online in the next 18 months. And I assure you
22 there's more, but I can't get into the realm of that because of
23 the time constraints and -- but I -- but due to the -- your
24 accommodating me with your -- due to your generous
25 accommodation, I mean I'm beginning to feel particularly

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 embarrassed here so I'll sit down.

2 But please, I think that it's imperative that you address
3 our more concrete values and those fundamental values are
4 individual freewill and complete and undeniable truth and if you
5 miss those along with the energy you will continue to have us in
6 a society that simply circles itself in some predatory mode of
7 disruption and lack of evolution. And so I think as a military
8 and a large body, a credible body, I am as obligated to bitch at
9 you as you are to lis -- to complain as you are to listen to me
10 in some ways and if I don't exercise that right then I'm as
11 guilty as those people who simply become disconnected and
12 suddenly push back in some malcontented position which harms
13 somebody. So.....

14 COLONEL ORR: Okay.

15 MR. KENDALL:I'll stop. Thank you very much.

16 COLONEL ORR: All right. Thank you. Anyone else? All
17 right. Well, on behalf of all current and future service
18 members I would like to thank each and every one of you for your
19 participation and input tonight. Alaska Command welcomes your
20 review and comments on the analysis contained in the Draft EIS.
21 Again, written comments can be substituted -- or can be
22 submitted by filling out a comment form tonight or mailing it to
23 the address on the comment form. Comments may also be submitted
24 via the website or by fax. All comments must be postmarked or
25 received by June 7th, 2012, to be considered in the final EIS.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 And if you haven't already done so, we encourage you to take a
2 look at the maps and other displays around the room. These
3 provide details on the individual proposals and we have someone
4 at each station to answer your questions. We appreciate the
5 time and JPARC and welcome your comments. That's why we're here
6 today. Thank you and this hearing is adjourned.

Anchorage, Alaska 99503
(907) 276-3554

1 P R O C E E D I N G S

2 (On the record at 7:02 p.m.)

3 COLONEL ORR: Thank you. The hearing is scheduled to end
4 at 9:00 o'clock. Therefore I'm asking everyone's cooperation in
5 limiting your remarks to four minutes so that all who wish to
6 have the opportunity to speak within the time the facility is
7 available to us. And if you don't feel comfortable standing up
8 to make a statement you can make -- you can submit a written
9 comment here tonight using a comment form. You can also submit
10 comments until June 7th, 2012. Keep in mind that written
11 comments are given the same consideration as the verbal comments
12 offered here tonight.

13 Now to ensure that we get an accurate record of what you
14 have to say please help me by respecting the following ground
15 rules. First, please speak clearly and slowly into the
16 microphone and state only your name and any organization you
17 represent, if that applies. Please do not provide any other
18 personal information, such as your home address or phone number.
19 Your oral comments will be recorded verbatim, used to develop a
20 transcript and permanent record of this meeting and will be
21 published as a final EIS. The names of individuals making
22 comments, as well as their comments, will be disclosed in the
23 final EIS. Personal home addresses and phone numbers will not
24 be published.

25 Second, each person will be allotted four minutes to

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 speak. In order to -- for each individual speaking to have the
2 full time allotted, audience members please be respectful of the
3 opinions offered by your neighbors. If you anticipate your
4 comments will extend beyond the time allotted please make the
5 most important comments first.

6 Third, if you have prepared a written statement you may
7 turn it in at the registration table or you may read it aloud if
8 you can do so within the four minute time limit. Please honor
9 any request that I make for you to stop speaking when you have
10 reached the four minute time limit. The timekeeper will hold up
11 a yellow card when you have 30 seconds left to assist you in
12 knowing when your allotted time is almost up so you can
13 comfortably conclude your remarks. When the red card is
14 displayed that means your four minutes are up and in the
15 interest of politeness and fairness to others who wish to speak
16 the speaker is asked to stop and return to his or her seat.

17 If there are no questions, we are ready to begin. The
18 first speaker for tonight is a Mr. Mike Wood.

19 MR. WOOD: Thank you again. Mike Wood, W-O-O-D.
20 Initially I asked the question about restricted areas that were
21 proposed just south of Delta and to the east of the highway.
22 Proposal A leaves a fairly wide corridor for VFR traffic going
23 north and south. It's the main route, we all know that, we've
24 (indiscernible) that area. Proposal B butts right up against
25 the highway, comes right close to the pipeline and it follows

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 VFR traffic into an extremely small corridor that goes north or
2 south. If you've ever been in that area you more than know that
3 a lot of aircraft do not have radios. They go through there in
4 marginal weather and to put everyone in that small little
5 corridor is basically giving a high risk for the possibility of
6 a midair. I would like to see proposal B give an extra buffer
7 to take it further to the east of approximately maybe one
8 kilometer or even two kilometers. This way people who do follow
9 highways, and a lot do, will be able to know that they're well
10 clear of any restricted area.

11 As far as flying the pipeline, it is clear for us, however
12 I would still like to see it either 2202 (indiscernible),
13 proposed east restricted areas (indiscernible) so at least you
14 could go either to the west and stay away from the east
15 restricted area or vice versa.

16 As far as the MOA is concerned at Paxon, this area is not
17 supposed to be active as a MOA except under certain
18 circumstances. However, I believe 500 AGL for the base of it
19 when it is active is far, far too low. Many aircraft transit in
20 that area between Glenallen, Black Rapids, through the Alaska
21 Range or in through Tok and giving us only 500 feet when it is
22 active for all of us is just not enough. I would like to see a
23 base of 2,000 feet, but I would accept 1,000. And we must have
24 some form of radio communication such as there is to the north
25 where we can call up radar on -- on range rather on 125-3. They

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 will tell us if they're active. If they're not, of course we
2 get the recording. If we have the same to the south that at
3 least you can actively find out if you're going into an active
4 MOA or not at the time that you are flying as opposed to doing
5 it the day before or the night before.

6 All in all I think the area, the MOA itself at Paxon being
7 500 and the undulating land between Summit, Black Rapids, it
8 undulates quite a bit, probably 1,500 to 2,000 feet. I would
9 like to see an MSL altitude and not an AGL. Thank you.

10 UNIDENTIFIED MALE: Thank you.

11 COLONEL ORR: Our next speaker is Mr. William, I think he
12 goes by Bill, Folsom. Is he here?

13 MR. FOLSOM: Bill Folsom. I have several reasons that I
14 don't think that any of the MOAs in this corridor of the rail
15 belt should be activated, only on the military bases. There's
16 way too many reasons. We have a large population in the rail
17 belt now and there's a lot of hunting activity and fishing
18 activity and camping activity and what have you that goes on
19 that be accessed by the largest population area. You know,
20 hunting season from August 15th to October 15th would probably
21 be the outside parameters.

22 You currently have an MOA for a 5,000 foot fly zone in
23 part of the area that you're proposing. I've had friends that
24 have had some of the pilots come, they're not sure, 100 feet
25 above the top of them. And they don't see them, they hear them.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

6

1 I mean it's just kind of a shock when they go over. And so if
2 they are -- if they're breaking the 5,000 feet down to 100 foot
3 or whatever, the 500 feet is going to be put aside I'm sure.

4 Fish and Game I'm sure has all kinds of activities that
5 they would like to do in this area. When they are taking
6 surveys and their windows for taking surveys on game are very
7 narrow and to have them disrupted because of activity. I wrote
8 some of these down. You know, six events for 10 days each or 60
9 a year and then there was the Army would have 242 days if I
10 heard that right. And then there's 14 days per battalion. I
11 don't know how many battalions there are. So I'm not even sure
12 of the -- whether there's a weekend open in this thing. But I
13 think the whole operation except for your bases, if you want to
14 have a fly zone to do these things should be moved east now. I
15 was thinking west before, but east to the Wrangell St. Elias.
16 That's federal land and we can't go in there without a note from
17 God. So that would be a good place for you to take that
18 operation I think.

19 So I think that's about all I have. I just don't think
20 that it's advisable to put this right in the populated areas
21 accessible by the largest group of people in the rail belt. I
22 am the local chair of the Fish and Game Advisory for the Mat
23 Valley, however, and I think most of them will agree with
24 everything I've said, but we're going to get some consensus as a
25 group and put in some comments later. So I guess that's all I

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 had to say. Thanks.

2 COLONEL ORR: Thank you. Our next speaker is Mr. Jim
3 Stocker. Is he here?

4 MR. STOCKER: Thank you, Colonel. For the record, my name
5 is Jim Stocker. And before I start my testimony or my comment
6 period I want to make something really clear to all the military
7 personnel here. Anything that I say please don't take it
8 personally. I have a high degree for all of you and for the
9 military itself and I know that this didn't come out of your
10 think tank. This probably came out of Washington somewhere,
11 somebody sitting at a desk that doesn't live here, doesn't
12 really understand the area, doesn't understand the issues.

13 But with that said, I've been here for 40 years. I've
14 been a pilot for 40 years. I have extensive time flying in this
15 proposed MOA or Military Operation Area 3 up in the Talkeetna
16 mountains, game management units 13 and 14. And when I first
17 heard about this, and I'll be up front about this, I don't know
18 a lot about it and I should know more about it. When you take
19 into consideration that the largest population of Alaska sits
20 right here in the Mat Su Valley in Anchorage and the playground
21 for the -- the epicenter of Alaska is the Kenai Peninsula and
22 the Talkeetna mountains. It's accessible -- let's talk about
23 the Talkeetna mountains, MOA 3 area and that little area that's
24 to the east of it there, that magenta area. It's accessible by
25 airplane, it's accessible by foot, it's accessible by boat, it's

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 accessible for four-wheelers and by vehicles. That's the
2 playground for Alaskans right there and for somebody in
3 Washington to come down and want to put a military operation
4 right over the top of it is absolutely ludicrous. I cannot
5 believe that somebody would be so arrogant to do that. There's
6 areas in the state that would do just as fine as that area right
7 there. And Bill Folsom, you stole some of my thunder. The
8 Wrangell St. Elias National Park, I've been in it. There's
9 nobody there. It's empty. The Wrangell St. Elias gate to the
10 arctic, you've got the parks out to the west, the Lake Clark
11 Park, you have Mt. McKinley Park. You have all these federal
12 areas. This is a state -- mostly state property. Why don't you
13 think about taking those areas out to a federal park or taking
14 it out of this area. It doesn't belong here, this is wrong.
15 This is just totally wrong.

16 And I don't mean to be so outspoken, but I've been here
17 for a long time. I've been a guide. I know what goes on here.
18 I know how many caribou permits are given out, how many moose
19 are taken. I've been on the Board. I used to be the Fish and
20 Game advisory chairman here at one time and I've worked with
21 Fish and Game, I've worked with the biologists, I've worked and
22 done counts. This area right here is a very sacred area for
23 people that live in Alaska and, like I said, this is the
24 epicenter right here as far as hunting and fishing. Sure,
25 Alaska's big, but as we all know, if you want to hunt in the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Brooks Range or you want to hunt out west or you want to hunt
2 down on the Alaska Peninsula it's a logistical nightmare, it
3 costs a fortune and it's not practical for a lot of people.
4 This area here should be left to Alaska, it should be left to
5 Alaskans. And again, nothing against the military, but this is
6 wrong and I would like to have the group of people here that
7 proposed this, you know, the people that really came up with
8 this idea in the first place because I'd really like to talk to
9 them.

10 But anyway, with that said, this is wrong and I don't
11 think it should be here. I think it should be moved and I think
12 this whole idea, this whole area of the military operation, MOA,
13 I see it on my flight map all the time, in this case three, Fox
14 3, and that other area should be changed and I think there
15 should be a great deal of consideration given to that. Thank
16 you.

17 COLONEL ORR: Thank you. The next speaker is Mr. Rod
18 Arno.

19 MR. ARNO: Thank you for the opportunity to testify. My
20 name is Rod Arno, A-R-N-O. I'm the Executive Director of the
21 Alaska Outdoor Council which is a group of over 10,000 Alaskan
22 outdoors folks.

23 The Outdoor Council has looked over this plan and been
24 part of the process since the beginning. Our concerns remain
25 the same. It's been well pointed out that GMU-13 is one of the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 close accessible state land. The State only has about 24
2 percent of the land and this state is managed by the State.
3 Sixty-four percent of it is federal and 12 is private ANCSA
4 land. So this is extremely important to our membership for
5 hunting, fishing, trapping and recreational use of the Nelchina
6 basin.

7 The 500 foot lower level, you know, that's just totally
8 not going to work out just because of the way the Alaskans use
9 the aircraft for access up here. You know, what happens up in
10 GMU-20, which is another really important part of game
11 management and state land, well, you know, the military lands
12 there, you're -- you know, obviously you can do what you want on
13 those. But on this one little piece of state land here it's
14 extremely important for Alaskans to be able to access that.

15 Another point I'd like to make is in the last couple
16 decades I've participated in a number of EISs that the federal
17 government's put up, BLM, their resource management plans and
18 comprehensive conservation plans for refuges and I hope the same
19 standards are used by the military on their EIS as the standards
20 that are put on the Alaskans when we try to participate and
21 actively be on federal lands. Thank you.

22 COLONEL ORR: Our next speaker is Ms. Lisa Moorehead.

23 MS. MOOREHEAD: Lisa Moorehead, M-O-O-R-E-H-E-A-D. And I
24 have a cabin just south of the existing MOA 3. Is that what
25 it's called? Fox 3 Military Operations Area. Our recreational

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 cabin's staked in a remote parcel staking 27 or eight years ago
2 and I go out there for peace and quiet. There's really not
3 anything else to say. I'd like it to stay that way. We
4 occasionally hear what are probably sonic booms from the
5 existing MOA and we would be probably encompassed in the
6 expansion. So my alternative would be a no action alternative
7 recommendation. Thank you.

8 COLONEL ORR: Thank you. The next speaker is Mr. Peter
9 Probasco.

10 MR. PROBASCO: Yeah, I'm Peter M. Probasco and I have a
11 couple comments. The first one is about communications and I
12 have the draft copy of this plan and it is a very, very
13 difficult study I think from the perspective of many of us that
14 are civilians. I got out of the Air Force in 1960 and I was
15 never that familiar with that many acronyms then. But there are
16 five pages of acronyms that go with this draft copy and if you
17 start studying it, I took them out so I could refer to them all
18 the time, but it's very, very confusing. And I think when you
19 want to communicate something you need to do it with some
20 clarity and recognition to the audience you're trying to
21 communicate with and I thought that was very confusing. I think
22 there is more clarity with this meeting than the one we had last
23 fall in Wasilla at the Menard Center.

24 Another thing, the comments that the individuals have made
25 about this being the playground center and the aspects of this

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

12

1 and the amount of it that's state land I think is very, very
2 significant. And I think state land is different from federal
3 land and is different from park land. Park land is federal
4 land. And I agree totally that there should be park land that's
5 part of this. Some of the park land is never even looked at by
6 anybody and it's not going to have any impact as far as
7 populations or probably not going to have any great impact on
8 our wildlife populations. But state land are -- have to be
9 managed supposedly in compliance with the Alaska Constitution
10 and so you need to take into consideration sovereignty of the
11 state.

12 And I think coordination was mentioned in one of the
13 presentations about coordination with FAA and a couple of other
14 entities. I think a coordination group should be actively
15 involved should be the department of Alaska Fish and Game
16 because game populations are very dynamic and the things that
17 game populations do is dynamic and what could be reasonably
18 acceptable one year may not be totally out of line the next year
19 because of changes in population, migrations, route and
20 everything else.

21 So I think all of these things -- I think it'd be very
22 important if there were clear statements in there that this has
23 been evaluated and assessments made by the Alaska Department of
24 Fish and Game.

25 Another concern, and coordination was a big one, but you

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 talked about biological refer -- or biological resources and the
2 evaluation indicated in a couple cases that this was not
3 significant, the impact on the biological resource. I think
4 that if you evaluate a biological resource, be it caribou or
5 what, during calving season, during any stage of pregnancy, any
6 kind of impact, it's very significant. I know in domestic
7 animals it's not difficult to cause a whole flock of sheep to
8 abort by stress and I'm sure that the same thing can happen in
9 caribou and I'm sure with dall sheep. I don't know about moose,
10 whether they're prone to that sort of thing, but I think if you
11 harass them enough they do abort too.

12 So these are significant considerations that need to be
13 made and I think there needs -- you'd communicate much better if
14 there were references made in the publication that there were
15 assessments made by the Alaska Department of Fish and Game,
16 coordination with other entities within the state clearly
17 stated. The fact that you went to studies is very, very good,
18 but where these studies came from, who made them and when is
19 very, very important. Thank you.

20 COLONEL ORR: Thank you. Our next speaker is Mr. Bob
21 Dittrick.

22 MR. DITTRICK: Thank you for letting me go on record. I'm
23 Bob Dittrick, D-I-T-T-R-I-C-K again.

24 COLONEL ORR: Okay.

25 MR. DITTRICK: And I was -- with my question earlier about

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200

14

1 the MOA 3 area and the groups of cabins which were included in
2 the new extension of it I was glad to hear that the -- there was
3 an alternative E that moves that over -- away from over the
4 heads of all the cabins that are out there. And so I would like
5 to support at least that, but I would like to go further and
6 support a non-alternative for that particular MOA because that
7 was -- I've had a cabin out there for 25 years and it was
8 presented by the state as a remote parcel and the reason we were
9 interested in having a cabin out there was to go out and live
10 remotely and quietly and sonic booms are going to be just a
11 short distance to the north of this sort of goes counter to the
12 reasons that we wanted to go out there to begin with. So I'd
13 like to support a no alternative or an alternative E at the
14 least.

15 COLONEL ORR: Thank you. All right. That is the last of
16 the comment cards that I have. Is there anyone here that hasn't
17 spoken that would like to give comments at this time?

18 MR. KREGER: Yes.

19 COLONEL ORR: All right. Come on up.

20 UNIDENTIFIED MALE: (Indiscernible).

21 COLONEL ORR: Okay.

22 MR. KREGER: Thank you, sir.

23 COLONEL ORR: All right.

24 MR. KREGER: My name is Frank Kreger, K-R-E-G-E-R, and
25 today I live in Wasilla. I don't have anything new to say.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 What I want to do is attempt to underscore some of the things
2 that have already been said. I would say it is not simply
3 inadvisable to do this, it is wrong. It is dead wrong. Not 99
4 percent, 100 percent. The federal government already has
5 control of 61 percent of this state. Do it there, period. End
6 of discussion. Go away now.

7 COLONEL ORR: Yes, ma'am.

8 MS. HOLT: Hello. My name's Jean Holt, H-O-L-T, and I
9 just want to be put on the record that alternative E is not
10 enough. The border needs to move further north and -- because
11 there's too much at stake here and it is a recreational area and
12 that's what it has been and it should continue. But it should
13 -- the -- alternative E, the border needs to be moved further
14 north. Thank you.

15 COLONEL ORR: Is there anyone else that has not spoken
16 that would like to do so at this time? Yes, ma'am.

17 MS. MATTHEWS: My name is Beverly Matthews and I live at
18 Lake Louise and we have about 200 -- over 250 cabins up there.
19 Now in the summertime lots of people fly and they -- I don't
20 know that they fly 500 feet, but they're coming back and forth
21 to their cabins and this just isn't going to work. That's why
22 they like having property on the lake. It's a beautiful place
23 and we just got to get the military up higher.

24 COLONEL ORR: Okay. Thank you. Yes, ma'am.

25 MS. KREGER: My name is Ann Kreger, K-R-E-G-E-R, and I

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

16

1 agree with all that's been said so far for the most part. But
2 another thing that concerns me is a gentleman that we were
3 talking to back in the room when we first came in mentioned that
4 one of the reasons for the area that is under consideration, Fox
5 3, is because it is close, it's in close proximity to JBER. It
6 would be cheaper, more economically feasible, for -- and more
7 cost effective to do training there, but I think for us as a
8 nation to look at something in terms of economic considerations
9 only and not human, animal and the land resources and sell out
10 for that reason is wrong. Thank you.

11 COLONEL ORR: Thank you. Is there anyone else who hasn't
12 spoken that would like to do so at this time? All right. Those
13 of you that have already spoken, if you would like you have an
14 opportunity to use another four minute allotment if you'd like.
15 Come right on up.

16 MR. STOCKER: Thank you, Colonel. Once again, for the
17 record, my name is Jim Stocker. There's something that I
18 omitted that I wanted to bring up. And it was a few months ago,
19 I don't know, five or six months ago the Air Force lost a jet up
20 in the Talkeetna mountains. Correct? As a pilot it shut me
21 down. You guys -- and again, nothing personal, but you put a
22 big corridor around that area, blocked everything off, and if
23 that's just one example of what might happen when there's, you
24 know, training exercises on the ground or other exercises or if
25 you have an accident and accidents happen. And I don't have any

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 problem with that. Accidents happen, we burn fuel. That's one
2 of my concerns. When that happened it really kind of threw my
3 plans into a tailspin and I don't want to be worrying all the
4 time if I'm flying in the wrong airspace or if I'm going to have
5 some jet come up and escort me down or I'm going to get turned
6 into the FAA and have a hassle with them. I don't need that.
7 You know, I'm 60 years old, I don't need anymore hassles. It's
8 a nice simple place to go. The rules right now are pretty
9 simple, you know, mostly class E airspace, everything's fine.

10 Another comment I wanted to make, as far as the fuel's
11 concerned, I can tell some of you military folks in the back
12 exactly how much fuel was used in Iraq per day. It was a lot
13 and I don't have a problem with that. If you need to use it,
14 use it, burn it up. But for us to say that -- or for you guys
15 to say, or the people that are, you know, proposing this, to say
16 that we're going to have to save some fuel, that doesn't work,
17 that doesn't work for me at all. You know, we move militaries
18 to Iraq, to Afghanistan. If we have to do it we do it, fuel's
19 not an issue, and I don't think it should be an issue here. The
20 issue here is the people in Alaska. In another state this
21 wouldn't happen, you wouldn't get away with it, not even maybe.

22 But with that said -- and I could stand here for hours and
23 hours and I appreciate the second opportunity to give a few
24 comments. I just basically wanted to state what happened here a
25 few months ago with shut down airspace, big inconvenience to

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 what we were actually doing at the time. Anyway, thank you.

2 COLONEL ORR: Thank you. Anyone else? Yes, ma'am.

3 MS. HOLT: Yes, Jean Holt again, H-O-L-T. I would just
4 like to make public comment that alternative E hasn't done
5 anything except move the border boundary 20 miles and that isn't
6 addressing the ceiling from 5,000 to 500. That's very crucial.
7 And also the increase of sonic booms from 35 to 50 decibels.
8 All these three impacts will -- these impacts and the six
9 adverse impacts on the MOA 3 haven't been addressed just by
10 expanding 20 miles and we do need to address the -- especially
11 the flight ceilings and the sound. Thank you.

12 COLONEL ORR: Thank you. Anyone else?

13 MR. FOLSOM: Why not.

14 COLONEL ORR: Sure. Come on up.

15 MR. FOLSOM: I've been to a lot of hearings on proposals
16 right here in this same building, you know, Bogard or this and
17 that and the other and every time so far it's been a pre-drawn
18 conclusion as to what's going to happen and no matter what the
19 testimony is it's always gone the way they want it to go. I've
20 never seen one time where we've turned anything around. Well,
21 yeah, one time when they burned an FRG (ph) out here at the
22 Butte school (ph). But -- and I hope that that's not what's
23 happening here.

24 It seems like a lot of effort's been put into this and
25 that you give lip service to listening to people and their

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 concerns, but then you continue to do exactly what you intend to
2 do with maybe a few little modifications. It does not belong in
3 the rail belt other than your bases. It just is not going to
4 work.

5 Now you have a small representation of people here, but as
6 soon as all this hits the fan and it actually starts happening
7 then people are going to come out of the woodwork and I mean
8 there'll be hundreds and hundreds of people that are going to be
9 upset. And so I hope that the whole thing is reversed except
10 for whatever you do on your existing bases and get all the MOAs
11 out of this rail belt area, these other expansions.

12 THE REPORTER: Sir, could you please state your name for
13 the record again?

14 MR. FOLSOM: Oh, yeah, Bill Folsom.

15 COLONEL ORR: Anyone else?

16 UNIDENTIFIED MALE: Would anybody like to talk about what
17 we can do, what to do to make sure voices get heard, et cetera?
18 Because I don't think it's going to happen (indiscernible).

19 COLONEL ORR: Come on up here.

20 MS. HUTCHINS: (Indiscernible). My name's Jeanine
21 Hutchins. I do plan to come in online, but I do want to respond
22 to that. I think that a lot of people don't understand what an
23 acronym named JPARC means and I think that my comment -- one of
24 my comments, and I will make more online, is that we need to be
25 better communicated in layman's terms to the community than just

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 acronyms that really don't -- even JPARC really doesn't mean
2 anything to me until I was alerted to the issue and did some of
3 my own research. And so I think people will be blindsided and I
4 think what we can do is to spread the word in our community that
5 people should be educated about this proposal, but it feels like
6 time is of the essence. We have less than a month to comment.
7 So I would encourage all of us here to tell everyone you know at
8 least about this and let them form their own opinion, but at
9 least make it more widely known what this obscure acronym means.
10 And there are great materials here and it seems like there is a
11 lot of information online, but I would say clearly by the
12 numbers here it is not very well known to the general public
13 that will be impacted by JPARC. Thank you.

14 THE REPORTER: Could you please spell your last name for
15 the record?

16 MS HUTCHINS: Hutchins, H-U-T-C-H-I-N-S.

17 COLONEL ORR: Yes, sir.

18 MR. PROBASCO: Peter M. Probasco. And as to the question
19 you stated and that's a very good question, as to what we can
20 do. Don Young spoke at the Palmer Chamber here a month or so
21 ago and one of the questions came up to him, the commentary made
22 about the amount of land up here that's controlled by the
23 federal people and the amount of land in parks. And of course
24 everybody thinks park land is totally sacred, they're not tread
25 or anything else, but there is a lot of park land that isn't

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 even looked at. And this was brought up to Don and he thought
2 that was one thing that possibly that there could be some
3 changes made is to recognize that there is a lot of land
4 available there not being utilized that isn't going to hurt
5 people if we do use it.

6 One of the comments was made that this area up here, Unit
7 13, is the breadbasket of Alaska. Don did come back and very
8 rightfully so say that to much of Alaska military payrolls are a
9 breadbasket also. So we do need to be very conscious of the
10 role that military plays in our economy. But that park land up
11 there that's available to get away from using state land, there
12 is no reason why they can't do many of these things over. It's
13 not going to hurt it at all and it's not even going to hurt our
14 game populations because none of those probably migrate into
15 areas where we can utilize them as prescribed by the Alaska
16 Constitution. So I think that's -- Don was sensitive to that
17 and maybe there is an outlet to do something.

18 COLONEL ORR: Thank you. Any additional comments? All
19 right. Going once. All right. Well, on behalf of all current
20 and future service members I would like to thank you again for
21 your participation and input tonight. Alaska Command welcomes
22 your review and comments on the analysis contained in the Draft
23 EIS. Again, written comments can be submitted by filling out a
24 comment form tonight or mailing it to the address on the comment
25 form. Comment forms may also be submitted via the website or by

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 fax. Comments must be postmarked or received by June 7th, 2012,
2 to be considered in the final EIS. If you haven't already done
3 so we once again encourage you to look at the maps and other
4 displays around the room. These provide details on the
5 individual proposals and we'll have someone at each station till
6 well after 9:00 o'clock to answer your questions. So we
7 appreciate your time and your interest in the JPARC and welcome
8 your comments. That's why we're here today. There being no
9 other further comments at this time the hearing is adjourned.
10 Thank you and have a safe trip home.

Anchorage, Alaska 99503
(907) 276-3554

1 P R O C E E D I N G S

2 (On record at 6:32 p.m.)

3 THE REPORTER: On the record, 6:32 p.m.

4 COLONEL ORR: Thank you. My name is Colonel Bill Orr and
5 I'm a Judge Advocate in the United States Air Force. As Colonel
6 Waring stated, I will be the presiding officer for this public
7 hearing on the Draft Environmental Impact Statement. This
8 hearing is held in accordance with the provisions of the
9 National Environmental Policy Act Regulations that are published
10 by the Counsel on Environmental Quality and Corresponding Air
11 Force Regulations on Environmental Planning.

12 The purpose of this hearing is to receive public comments,
13 that is your comments, on the Draft Environmental Impact
14 Statement commonly referred to as the Draft EIS. Before
15 receiving your comments I'd like to take a moment and explain my
16 role in this hearing. I am the full-time Chief Judge of the Air
17 Force Court of Criminal Appeals located at Joint Base Andrews
18 near Washington, D.C. I am not assigned or connected with
19 Alaskan Command and I am not involved in the Joint Pacific
20 Alaska Range Complex planning or proposals. I normally preside
21 over the appeals of military members who were tried by trials by
22 court-martial, but I've been requested to preside over these
23 hearings to support the public review and involvement process.
24 I am not here to act as a legal advisor to the Army or the Air
25 Force representatives of this proposal. My role as presiding

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 officer is simply to ensure that we have a fair, orderly and
2 impartial hearing and that all who wish to be heard will have a
3 reasonable opportunity to speak. In summary, it's important
4 that you understand that I will be serving as the impartial
5 moderator for this hearing.

6 Your input and comments are important. The environmental
7 impact analysis process ensures that the public has
8 opportunities to review the analysis and provide comments for
9 the record. Your comments will ensure that the decision makers
10 have the benefit of your local knowledge and are aware of your
11 concerns about the environmental analysis for this EIS before
12 they decide on a course of action. Alaskan Command, the Army
13 and Air Force representatives are here to accept your comments,
14 but not to respond to them at this time. Public comments will
15 be reviewed and considered and addressed in the Final EIS.
16 Comments on issues unrelated to the EIS are beyond the scope of
17 this hearing.

18 To request an opportunity to make an oral comment, please
19 fill out the speaker request card and turn it in to a staff
20 person, if you have not already done so. Every speaker,
21 including public officials, organizational spokespersons and
22 private individuals, will have four minutes each to provide his
23 or her comment which is being transcribed by a court reporter.
24 I will call the speakers in the order which they signed in, with
25 elected officials having the opportunity to speak first. No

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 electronic presentations will be permitted, although Alaskan
2 Command encourages you to submit them as part of the written
3 public record.

4 At this time we'll take a short break and that'll allow
5 you to sign up to make public comment and if you -- if you have
6 not already done so already. So we will reconvene at 7:00
7 o'clock to begin taking public comments. Thank you.

8 THE REPORTER: Off the record, 6:36 p.m.

9 (Off record at 6:36 p.m.)

10 (Off record at 6:59 p.m.)

11 THE REPORTER: On the record, 6:59 p.m.

12 COLONEL WARING: Okay. What we're going to do, it's kind
13 of unique because nobody's said they want to give a public
14 comment right now. We're going to give Colonel Orr the
15 opportunity to give you the opportunity to (indiscernible) if
16 you will and then you don't have to say anything, but then at
17 least we've done it and shown a full record that we've made the
18 opportunity. Okay? That's what we're going to do and if you
19 still want to comment we still welcome that, so.....

20 COLONEL ORR: Couldn't have said it any better. Yeah, if
21 you'd like to make comments here are the ground rules for making
22 comments. So to ensure that we have a accurate record of what
23 you have to say please help me by respecting these following
24 ground rules.

25 First, speak slowly into the microphone, state only your

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 name and any organization you represent, if that applies.
2 Please do not provide any personal information, such as your
3 home address or phone number. Your oral comments will be
4 recorded by the court reporter verbatim and used to develop a
5 transcript and permanent record of this meeting and will be
6 published as part of the Final EIS. The names of individuals
7 making comments, as well as their comments, will be disclosed in
8 the Final EIS. Personal home addresses and phone numbers will
9 not be published.

10 Second, each person will be allotted four minutes to
11 speak. In order for each individual speaking to have the full
12 time allotted, audience members, please respect the opinions
13 offered by your neighbors. If you anticipate that your comments
14 will extend beyond the time allotted, please make your most
15 important comments first.

16 Third, if you've prepared a written statement you may turn
17 it in to the registration table or you may read it out loud if
18 you can do so within the four minute time limit.

19 Fourth, please honor any request that I make that you stop
20 speaking when you have reached your four minute time limit. The
21 timekeeper will hold up a yellow card and -- when you have 30
22 seconds left to assist you in knowing when your allotted time is
23 almost up so that you can comfortably conclude your remarks.
24 When the red card is displayed that means your four minutes are
25 up and in the interest of politeness and fairness to others who

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 wish to speak the speaker is asked to stop and return to his or
2 her seat.

3 Now as of this time no one has submitted any written
4 comments or a request to speak, so I ask anyone here would you
5 like to make any comments at this time?

6 (Pause)

7 (Whispered conversation)

8 COLONEL ORR: Okay. On behalf of all current and future
9 service members I'd like to thank you again for your
10 participation and input tonight. Alaskan Command welcomes your
11 review and comments on the analysis contained in the Draft EIS.
12 Again, written comments can be submitted by filling out a
13 comment form tonight or mailing it to the address on the comment
14 form. Comments may also be submitted via the website or by fax.
15 Comments must be postmarked or received by June 7th, 2012, to be
16 considered by the -- in the Final EIS. And if you haven't
17 already done so, we encourage you to look at the maps and the
18 displays around the room. These provide details on the
19 individual proposals and if we have -- and we will have someone
20 at each station to answer your questions. We appreciate the
21 time and interest you have in the JPARC and welcome your
22 comments and that's why we came here today.

23 Is there anyone else at this time that would like to make
24 a comment? An oral comment. All right. We'll be here until
25 9:00 o'clock, so if you change your mind, you know, you can

KRON ASSOCIATES

3 COLONEL ORR: Bill Orr and I'm a Judge Advocate in
4 the United States Air Force. Now, as Colonel Waring stated, I
5 will be the presiding officer for this public hearing on the
6 Draft Environmental Impact Statement. The hearing is held in
7 accordance with the provisions of the National Environmental
8 Policy Act Regulations that are published by the Counsel on
9 Environmental Quality and Corresponding Air Force Regulations on
10 Environmental Planning.

11 The purpose of this hearing is to receive public comments,
12 that is your comments, on the Draft Environmental Impact
13 Statement commonly referred to as the Draft EIS. Before
14 receiving your comments I'd like to explain my role in this
15 hearing. I am the full-time Chief Judge of the Air Force Court
16 of Criminal Appeals located at Joint Base Andrews near
17 Washington, D.C. I am not assigned or connected with Alaskan
18 Command and I am not involved in the Joint Pacific Alaska Range
19 Complex planning or proposals. I normally preside over the
20 appeals of military members who were tried by trial by courts-
21 martial, but I've been requested to preside over these hearings
22 to support the public review and involvement process. I am not
23 here to act as a legal advisor to the Army or the Air Force
24 representatives of this proposal. My role as presiding officer
25 is simply to ensure that we have a fair, orderly and impartial

 KRON ASSOCIATES
 1113 W. Fireweed Lane, Suite 200
 Anchorage, Alaska 99503
 (907) 276-3554

1 hearing and that all who wish to be heard will have a reasonable
2 opportunity to speak. In summary, it is important that you
3 understand that I will be serving as an impartial moderator for
4 this hearing.

5 Your input and comments are important. The environmental
6 impact analysis process ensures that the public has
7 opportunities to review the analysis and provide comments for
8 the record. The comments will ensure the decision makers will
9 have the benefit of your local knowledge and are aware of your
10 concerns about the environmental analysis for this EIS before
11 they decide on a course of action. Alaskan Command, the Army
12 and the Air Force representatives are here to accept your
13 comments, but will not respond to them at this time. Public
14 comments will be reviewed and considered and addressed in the
15 Final EIS. Comments on issues unrelated to the EIS are beyond
16 the scope of this hearing.

17 To request an opportunity to make an oral comment, please
18 fill out the speaker request card and turn it in to a staff
19 person, if you haven't already done so. Each speaker, including
20 public officials, organizational spokespersons and private
21 individuals, will have four minutes each to provide his or her
22 comment which is being transcribed by the court reporter. I
23 will call the speakers in the order in which they are signed in,
24 with elected officials having the opportunity to speak first.
25 No electronic presentations will be permitted, although Alaskan

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Command encourages you to submit them as part of the written
2 record.

3 We will now take a short break so -- to allow you to sign
4 up to make public comments, if you have not already done so.
5 And we will reconvene at 7:00 o'clock to begin taking public
6 comments. Thank you.

7 THE REPORTER: Off the record, 6:46 p.m.

8 (Off record at 6:46 p.m.)

9 (Off record at 7:00 p.m.)

10 THE REPORTER: On the record, 7:00 p.m.

11 COLONEL ORR: Could I ask everyone to please take a seat?
12 Hello. Hello.

13 COLONEL WARING: We're going to start the public comment
14 portion of the hearing, so. This is a transcribed service over
15 here in the corner that is recording this public comment and
16 public record. Just keep the noise down to a minimum please.

17 (Whispered conversation)

18 COLONEL ORR: All right. Thank you. The hearing is
19 scheduled to end at 9:00 o'clock. So if anyone -- if everyone
20 who wishes to do so has spoken and you'd like an opportunity to
21 expand on your remarks you may do that if you have the chance
22 and time permits. Now if you don't feel comfortable standing up
23 to make a statement you can submit a written comment here
24 tonight using a comment form. You can also submit your comments
25 until June 7th of 2012. Keep in mind that written comments are

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 given the same consideration as the verbal comments offered here
2 tonight.

3 Now to ensure that we get an accurate record of what you
4 have to say please help me out by respecting the following
5 ground rules. First, speak clearly and slowly into the
6 microphone. Now these microphones don't amplify, they're just
7 -- they just record. And state only your name and any
8 organization you wish to represent, if that applies. Please do
9 not provide any other personal information, such as your home
10 address or phone number. Your oral comments will be recorded by
11 the court reporter verbatim and used to develop a transcript and
12 permanent record of this meeting and will be published as part
13 of the Final EIS. The names of individuals making comments, as
14 well as their comments, will be disclosed in the Final EIS.

15 Personal home addresses and phone numbers will not be published.

16 Each person will have four minutes to speak. In order for
17 each individual speaking to have the full time allotted,
18 audience members, please be respectful of the opinions offered
19 by your neighbors. If you anticipate your comments will extend
20 beyond the time allotted, please make the most important
21 comments first.

22 If you've prepared a written statement you may turn it in
23 at the registration table or you may read it aloud if you can do
24 so within the four minute time limit.

25 Fourth, please honor any request that I may make for you

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 to stop speaking when you have reached your four minute time
2 limit. The timekeeper will hold up a yellow card when you have
3 30 seconds left to speak to assist you in knowing when your
4 allotted time is almost up so that you can comfortably conclude
5 your remarks. When the red card is displayed that means your
6 four minutes are up and in the interest of politeness and
7 fairness to others who wish to speak the speaker will be asked
8 to stop and return to his or her seat.

9 Before we begin are there any questions?

10 (Whispered conversation)

11 COLONEL ORR: All right. Well, then we are now ready to
12 begin. The first speaker of the night is Mrs. Mary Odden. Do I
13 have it right?

14 MS. ODDEN: Yeah.

15 COLONEL ORR: Okay.

16 MS. ODDEN: Thank you. Glasses.

17 UNIDENTIFIED MALE: (Indiscernible).

18 MS. ODDEN: Thanks.

19 UNIDENTIFIED MALE: Sure.

20 MS. ODDEN: Okay. Well, I hope to give a better more
21 detailed and objective statement written. This is a perhaps
22 emotional reaction or perhaps socioeconomic, whatever you want
23 to call it. We are mostly concerned with the Fox 3 MOA
24 expansion and especially with the low level and the effects on
25 commercial aviation, general aviation, people getting to their

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 homes, wildlife management. But we're concerned in general
2 about the appropriation of land and sky resources in Alaska in
3 general and we're not unappreciative of what the military is
4 doing for us, so please don't think that we are.

5 John Adams, second President, father of the U.S. Navy,
6 established the U.S. Navy, once disbanded the standing U.S. Army
7 of the United States even under the threat of conflict with
8 France at that time because he believed the soldiers should
9 never again be garrisoned in our homes. He thought that was a
10 substantial reduction of our freedoms that Americans should
11 never be subjected to and because of his concerns that is in our
12 Bill of Rights today. We do not have soldiers garrisoned in our
13 homes, Americans do not. What would John Adams think about the
14 military taking our sky above our homes in so many areas? What
15 should we think about it, what should you think about it as
16 members of the military?

17 You've heard about what we think is a treasure chest of
18 resources in our area. Some of the only recreation area, the
19 public -- Nelchina public use area that we've worked hard since
20 the 1970s to maintain for snow machines, for airplanes, for
21 hunting, for the exploration for oil and gas, for many levels of
22 public use and we didn't want the restrictions that were put
23 elsewhere by the national park. We didn't want the restrictions
24 on people's basic freedom to do those things. We wanted to
25 share the use. It's not empty space. We've worked hard to keep

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 that space free for the development -- economic development,
2 maintenance of our wildlife stocks, our fish.

3 You've heard about the noise levels at Paxson Hatchery,
4 that they can't slam a door at certain times a year, they cannot
5 play music in the fish hatchery where this very important red
6 fishery hatchery for the whole Copper River loses the fry. We
7 have deep concerns about the expansions of these MOAs.

8 This is the age of digital reality. We don't want you to
9 kill young pilots. We want you to have the simulations, we want
10 you to be able to go over the terrain. We've worked in Alaska,
11 since the 1970s we've worked around the MOAs out at McGrath, up
12 north at Fort Yukon. We know that you spend the same amount of
13 gas when airplanes go like this or if they go like this. That's
14 the same amount of gas. The reality is that the MOA does not
15 have to come over the top of us. You can keep it north, you can
16 keep it further north than 20 miles and we believe that you
17 should stay above, caution, 5,000 feet.

18 Okay. You who have given much to us to protect, our
19 freedom, and we know what that means. There's people in this
20 area that have lost their kids to the wars overseas. Do not
21 proceed with plans which reduce our freedoms. We've lived here
22 a long time. This is important to us. Be careful, careful how
23 you do this. Thank you.

24 COLONEL ORR: Ma'am, before you sit down, I do this in
25 court a lot. When people use their hands it doesn't translate

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

9

1 onto the -- so can you describe what you were doing with your
2 hands?

3 MS. ODDEN: You have an air....

4 COLONEL ORR: Take as long as you'd like.

5 MS. ODDEN: You have an airplane at point A and point B
6 and they want to do an exercise between them. They spend the
7 same amount of gas if they meet in the middle or if airplane A
8 stays where it is and point -- and airplane at point B goes to
9 meet it. Does that adequately -- does that get it?

10 UNIDENTIFIED MALE: I understand it.

11 COLONEL ORR: Okay.

12 MS. ODDEN: Okay.

13 UNIDENTIFIED MALE: Thank you.

14 MS. ODDEN: Thank you very much.

15 COLONEL ORR: All right. Our next speaker is Mr. David
16 Parmenter.

17 MR. PARMENTER: Yeah, that's correct.

18 COLONEL ORR: Okay.

19 MR. PARMENTER: David Parmenter. I operate Copper Valley
20 Air Service here in the basin. Again, the other air taxis
21 around here aren't here so I'm kind of speaking for them. But
22 the MOA low level, we have limited time in the Basin. We got
23 tremendous winter months. We don't see why there should be low
24 level essentially say from the month of June -- or month of May
25 through October when all the revenue is being developed in that

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 four months.

2 The expand or have a boundary say from the Denali Highway
3 north, Talkeetna, Richardson Highway, use that -- don't use that
4 in the month -- for four or five months out of the year and
5 maintain at least 5,000 feet above with your original MOA. We
6 just don't need the conflict with our revenue, tourism, three
7 major holidays and hunting season. And I do a tremendous amount
8 of flying in the Basin in that time and that's just one more
9 thing I got to watch out for. That's one of our main concerns.

10 But we got a tremendous amount of land here and, again, I
11 don't think we should be whipping around here over the top of
12 everybody's houses, homes, cabins. Call it what you like, but
13 essentially it's going to disrupt a tremendous amount of
14 revenue. Thanks.

15 COLONEL ORR: Thank you. Our next speaker is Ms. Ruth
16 McHenry.

17 MS. MCHENRY: Thank you. My name is Ruth McHenry. I
18 represent Copper Country Alliance which is a nonprofit
19 organization in the Copper Basin that seeks to protect our
20 natural resources and the way that people use them. This is
21 such a complicated document and I haven't had time to really go
22 through it, that these are very, very preliminary remarks that
23 I'm making tonight. I'm going to, however, come out in support
24 of the no action alternative. I'm going to limit my comments to
25 Fox 3 and to Paxson MOA.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 As I said, I haven't looked deeply into the EIS, but where
2 I have it seems to me to be quite inadequate in spite of its
3 great length. I have the impression that the writers simply had
4 a lack of knowledge of this area and its resources. Probably it
5 was written by those who don't live here in the Basin and if
6 they are living in Alaska haven't been here for a long time and
7 probably won't be here for a long time. I -- we are used to
8 seeing environment impact statements that are written by people
9 who live and work here and they're very different.

10 I want to make an example of the cumulative impact area.
11 With regard to cumulative impacts, I haven't found any mention
12 of the Susitna Dam which would greatly affect this area and our
13 biological resources or recreation. No mention of the mineral
14 exploration and possible development around Tangle Lakes. No
15 mention of biomass harvest, climate change. I did find
16 cumulative impacts regarding the oil pipeline and the gas
17 pipeline, but not with respect to the biological resources, only
18 with respect to some of the other resources.

19 With respect to biological resources, there is a very
20 short paragraph on cumulative impacts with other non-military
21 actions. In other words, how does this proposal relate to
22 things that are going on that are non-military in terms of
23 effects on us. No substantive non-military actions have been
24 identified for the areas under the proposed expanded Fox 3 or
25 Paxson MOAs. Therefore, contributions of non-military actions

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 to cumulative impact effects in the Fox 3 Paxson MOA proposal
2 area would be insignificant. Now that's in the biological
3 resources section for cumulative impacts. I just am quite
4 amazed at that statement. Caution.

5 Biological resources, recreation and subsistence all
6 intermesh. Biological resources are essential to subsistence
7 and to almost all recreation and I think that recognition is
8 lacking in this EIS and it makes for a very confusing document.
9 Thank you for your time and for making this opportunity
10 available.

11 COLONEL ORR: Thank you. Our next speaker is Gloria
12 Slick.

13 MS. STICKWAN: Stick.

14 COLONEL ORR: Stick?

15 MS. STICKWAN: Stickwan.

16 COLONEL ORR: Okay.

17 MS. STICKWAN: I've just begun to read this EIS. A lot of
18 this is new to me, so I'm trying to read through it and
19 understand what I'm reading through. I want to first say that I
20 have family members that are in the Navy and in the Army and I'm
21 proud of them. I respect the military. I respect what you're
22 doing for our country.

23 I just want to say that I have a concern about the low
24 level flights, especially when we're out camping, hunting,
25 fishing, you know, how it'll affect our subsistence, customary

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 and traditional use of the areas when we're out there. You
2 know, how it's going to affect the caribou and the moose and
3 other wildlife. Those are my concerns.

4 The other one I'm concerned about is the hunting and
5 fishing season dates. Every year the Board of Game meets and
6 they change the season dates. So when you say late August, you
7 know, that doesn't -- that isn't in -- doesn't time with our
8 seasons. It should be August 1st through the end of September
9 in the report or the EIS.

10 Those are my concerns mostly is the hunting and fishing
11 and being able to continue that and -- without interruption or a
12 lot of noise and to the wildlife management, being able to make
13 sure those wildlife stay out there and they're healthy and
14 they're not being destroyed, or damaged, or ruined, or taken
15 away from us. Thank you.

16 COLONEL ORR: Thank you. All right. Those are all the
17 comment cards that I have or requests to speak. Is there anyone
18 who hasn't spoken that would like to do so at this time? Is
19 there anyone that -- who has previously spoken that would like
20 to supplement their remarks? That looks like a yes.

21 UNIDENTIFIED FEMALE: I'll write it.

22 COLONEL ORR: Okay.

23 UNIDENTIFIED FEMALE: Thank you.

24 COLONEL ORR: All right. Anyone else? Would you like to
25 come back up or....

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 UNIDENTIFIED FEMALE: No.

2 COLONEL ORR: All right. Okay. All right. Well, on
3 behalf of all current and future service members I would like to
4 thank you again for your participation and your input tonight.
5 Alaskan Command welcomes your review and comments on the
6 analysis contained in the Draft EIS. Again, written comments
7 can be submitted by filling out a comment form tonight or
8 mailing it to the address on the comment form. Comments may
9 also be submitted via the website or fax. All comments must be
10 postmarked or received by June 7th, 2012, to be considered in
11 the Final EIS. Now if you haven't already done so, we encourage
12 you to look at the maps and other displays around the room.
13 These provide details on individual proposals and we will have
14 someone at each station to answer your questions. We appreciate
15 your time and interest in the JPARC and we welcome your
16 comments. That's why we're all here today.

17 Thank you for your time and attention. This hearing is
18 adjourned. Please have a safe trip home.

2 (On record at 6:59 p.m.)

3 THE REPORTER: On record, 6:59 p.m.

4 COLONEL ORR: All right. Okay. The hearing tonight is
5 scheduled to end at 9:00 o'clock and if everyone who wishes to
6 do so has spoken and you'd like an opportunity to expand on your
7 remarks you will have the chance to do so if time permits. Now
8 if you don't feel comfortable standing up and making a statement
9 you can submit a written comment here tonight using a comment
10 form. You can also submit comments until June 7th, 2012. Now
11 keep in mind that written comments are given the same
12 consideration as the verbal comments offered here tonight.

13 To ensure that we get an accurate record of what we have
14 to say please help me by respecting the following ground rules.
15 First, speak clearly and slowly into the microphone. Now this
16 microphone does not amplify, but it does go right to the court
17 reporter's machine. State only your name and any organization
18 you represent, if that applies. Please do not provide any
19 personal information, such as your home address or phone number.
20 Your oral comments will be recorded by the court reporter
21 verbatim and used to develop a transcript and permanent record
22 of this meeting and will be published as part of the Final EIS.
23 The names of the individuals making comments, as well as their
24 comments, will be disclosed in the Final EIS. Personal home
25 addresses and phone numbers will not be published.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Second, each person will be allotted four minutes to
2 speak. In order for each individual speaking to have the full
3 time allotted, audience members, please be respectful of the
4 opinions offered by your neighbors. If you anticipate that your
5 comments will extend beyond the time allotted, please make the
6 most important comments first.

7 Third, if you have prepared a written statement you may
8 turn it in at the registration table or you may read it out loud
9 if you can do so within the four minute time limit.

10 Fourth, please honor any request that I may make for you
11 to stop speaking when you have reached your four minute time
12 limit. The timekeeper will hold up a yellow card when you have
13 30 seconds left to speak to assist you in knowing when your
14 allotted time is almost up so that you can comfortably conclude
15 your remarks. When the red card is displayed that means your
16 four minutes are up and in the interest of politeness and
17 fairness to the others who wish to speak the speaker is asked to
18 stop and return to his or her seat.

19 At this time are there any questions about the ground
20 rules? Well, then we're ready to begin. The first speaker
21 tonight is Audubon Bakewell.

22 MR. BAKEWELL: (Indiscernible).....

23 COLONEL ORR: Could I get you to -- hold on. I'll bring
24 it to you. But like I said, it doesn't amplify.

25 THE REPORTER: Could you state your name and spell your

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 last name for the record, sir?

2 MR. BAKEWELL: Thank you. I am Audubon Bakewell, B-A-K-E-
3 W-E-L-L from Paxson and I'd like to take this time to thank the
4 members of the Air Force and Army who came to Paxson tonight to
5 present your statements and I yield the balance of my time.

6 COLONEL ORR: Thank you. Our next speaker is Mr. Lucas
7 Catledge.

8 MR. CATLEDGE: Thank you. My name is Lucas Catledge, C-A-
9 T-L-E-D-G-E. I work with the Gulkana hatchery here locally and
10 my main concern is probably the sonic booms. And working at the
11 salmon hatchery here in the fall especially when we have eggs
12 loaded in the incubators I see that as a potential threat to the
13 safety of the eggs. They're very susceptible to shock and even
14 at the 5,000 foot a sonic boom will rattle and shake things here
15 on the ground. And fortunately we haven't seen any substantial
16 loss in the past, but I see here on the scheduling for their red
17 flag training exercises that this year's proposed to be August
18 -- or scheduled to be in August and again in October. And that
19 first date, August 6th through the 17th, is when we're first
20 loading eggs into the incubators and they're very fragile until
21 they eye up. That's about two months in time. And so that
22 would extend -- and our main egg take extends into the first
23 part of October often and so the eggs are a very fragile state
24 at the -- at that point. And so like I said, even at 5,000 feet
25 a sonic boom directly over the canyon would be detrimental.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 So my concerns are mainly for this -- the Paxson MOA here.
2 And that's all of my comments. Thanks.

3 COLONEL ORR: Thank you. Our next speaker is Ms. Jenny
4 Rodina.

5 MS. RODINA: My name is Jenny Rodina, spelled R-O-D-I-N-A.
6 And this is a comment period, but it's kind of a question also.
7 My question comment is about the alternative E for the Paxson
8 MOA. It's stating that there's the potential for moving the
9 southern boundary of the Paxson MOA north by approximately 20
10 miles because residents around Lake Louise complained about
11 potential noise and there are also impacts to residents, tourism
12 companies and other organizations in that area. And the
13 alternative E was proposed after the public comment -- the first
14 public comment period. Well, my question is a number of us here
15 in the Paxson community also made public comments about noise
16 and impacts to residents and tourism companies in this area. So
17 my question is if you're listening to the people in Lake Louise
18 and moving the southern boundary of the Paxson MOA by 20 miles
19 why not move it 20 miles north of Paxson as well.

20 You already state in your literature that there are
21 significant adverse impacts for socioeconomics, land use and
22 noise. You already know that these are potentially big problems
23 and we know it too. So I'll just make the comment again
24 verbally that we'd like for you to listen to us here in Paxson
25 just the same as you listened to the folks down by Lake Louise.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Thank you.

2 COLONEL ORR: Thank you. Our next speaker is Mr. Gary
3 Martinek.

4 MR. MARTINEK: Yeah, my name is Gary Martinek, M-A-R-T-I-
5 N-E-K. I'm the hatchery manager at Gulkana hatchery, a State
6 facility started in 1973. This is the largest sockeye facility
7 in the world. It's three miles north of Paxson Lodge on a
8 series of springs. The salmon that we provide are basically
9 used for commercial fishing, subsistence, personal use and sport
10 fishery. The upper Copper River is the source of one of the
11 most valuable sockeye and king salmon resources in the state.
12 Besides the hatchery springs, there are over 10 different wild
13 sockeye stocks and at least six different stocks of wild king
14 salmon and the most northern stock of wild rainbows in the
15 United States. Like Luke Catledge mentioned, our single biggest
16 concern is during this window of incubation which is roughly --
17 can be 120 days. These eggs are extremely susceptible to any
18 type of noise or shock and can be killed with just a simple
19 sound of a gunfire in an incubator. And we definitely would
20 like you to relook at this situation. I mean this is a very,
21 very valuable resource to not just people in the state of
22 Alaska, but people world wide. So thank you.

23 COLONEL ORR: All right. Our next speaker is Mr. Tony
24 Peterson.

25 MR. PETERSON: My name is Tony Peterson, P-E-T-E-R-S-O-N.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 I represent Paxson Lodge. I'm also the President of the
2 Community of Paxson. My concerns mostly are the effect on
3 tourism along with this lodge being as old as it is the sonic
4 booms, the possibility of blowing out windows and guests being
5 in the rooms. If a window was to shatter the impact on that
6 guest as well. These are single pane windows. This lodge is
7 old. It's been here forever. It's been in this area since
8 1904, this lodge has been here since 1946.

9 The hatchery is also a concern. The hatchery provides the
10 salmon not only for this area, but like Gary said, for the
11 entire northeast mar -- or northwest market and around the world
12 actually.

13 The drop in altitude to 500 feet above ground level will
14 also impact the hunting for this area as far as I am concerned
15 and it will also impact the industry that we have where we have
16 people coming to stay here and stay at this lodge and in this
17 area and provide business to not only myself but to Myers (ph)
18 Lake and to Mr. Bakewell's Denali Cabins. This area -- I am --
19 I'm for the military training and having the ability to train
20 and to provide these maneuver -- or to do these maneuvers, but I
21 do not believe that the Paxson area is an area that is
22 susceptible to these maneuvers. There's plenty of area to the
23 north. Expand the Yukon River. Yukon River there is little to
24 no inhabitants. I understand that you need the geographical
25 with the mountains and that for your training, but Pax -- the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 area of Paxson and the Gulkana River I do not believe are your
2 best points of interest, they need to be moved. Even if you go
3 north beyond the Paxson area between Fielding (ph) Lake and the
4 Donnelly (ph) area. That would be even -- that'd be very well
5 acceptable for me. Thank you very much.

6 COLONEL ORR: Thank you. Those are the comments from the
7 folks that have signed up already. Is there anyone who hasn't
8 spoken that would like to make a comment at this time? All
9 right. And could I ask you to give your name and spell it for
10 the court reporter?

11 MR. SCHANDELMEIER: John Schandelmeier, S-C-H-A-N-D-E-L-M-
12 E-I-E-R. I'm chair of the.....

13 UNIDENTIFIED MALE: You need to.....

14 MR. SCHANDELMEIER: Did you get it? You didn't get it?

15 UNIDENTIFIED MALE: (Indiscernible).

16 MR. SCHANDELMEIER: S-C-H-A-N-D-E-L-M-E-I-E-R. I'm a
17 Paxson resident, also a resident McClaron (ph) River, Chair of
18 the Paxson Fish and Game Advisory Committee. And my comments
19 are kind of based on this same thing everybody else is here.
20 It's -- low level training is a negative impact for this area,
21 the whole Nelchina Basin actually. It's the highest use
22 recreational area in the interior of Alaska or one of the
23 highest in southcentral I guess it would be if you want to call
24 it southcentral instead of interior. Seems like could have
25 picked a better area, a lot less impact, lot less controversy.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 The solution I have if you're stuck on this area is no fly
2 zones, 10 mile radius around Paxson, Tangle Lakes, McClaron (ph)
3 River, wherever else is a concern, wherever there's people. If
4 you have the no fly areas around those it seems like that solves
5 a lot of problems as long as you can keep people out of those
6 areas. And that seems to be a concern because right now
7 Paxson's supposed to have aircraft at 18,000 feet and no lower.
8 We certainly do. We have their right on the deck at times. So
9 like to see that -- some -- the way to monitor that, again, is a
10 no fly zone at all, you don't have to worry about it, their
11 altitude. So that's the solution that I see and other than
12 moving the whole MOA out of here and putting it somewhere else
13 where there's less people that's it. Thank you.

14 COLONEL ORR: Thank you. Is there anyone else who hasn't
15 spoken that would like to give a comment at this time?

16 MR. ALCOTT: I guess.

17 COLONEL ORR: Okay.

18 (Conversation and laughter away from microphone.)

19 MR. ALCOTT: You're laughing and I haven't even started.

20 UNIDENTIFIED MALE: That's right.

21 MR. ALCOTT: What's up with that. My name's Gary Alcott
22 and I get some very.....

23 UNIDENTIFIED MALE: (Indiscernible).

24 MR. ALCOTT: All right. A-L-C-O-T-T. Louise May was my
25 mom. Yeah, Gary. So probably my biggest concern is with the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

10

1 hatchery and stuff too because I think that's such a huge deal.
2 But I really feel the need, you know, to have these live
3 exercises and stuff and -- but probably don't want it right here
4 where it's going to damage the hatchery. But I definitely --
5 you know, you can fly over my house down in there anytime you
6 want, you know. I get my pacemaker struck up there a little
7 bit.

8 But the other thing I'm thinking is I know -- now, you
9 know, our pilots I'm sure would not violate any, you know, drop
10 down and go for it, but we also have other pilots, right, that
11 do these things from all over the world, you know, England and
12 whatever. So, you know, maybe our guys might get in a little
13 bit of trouble if they did something like that, but you might
14 not be able to control the people from the other countries. And
15 so, you know, it just takes one jet, go down there go right over
16 the hatchery and just like wasn't that a blast. But -- you
17 know, and then that's done.

18 So anyway, I really want all the training because you look
19 at what our Air Force does and stuff in the world and dominates
20 like that. Well, they don't do that on computers, you know,
21 they got to have it. So -- but I guess the hatchery's my
22 biggest thing I'm worried about because it is such a huge thing
23 and it doesn't even look like it, you know. So a lot of people
24 don't even know it. So anyway, I guess that's it. Oh, sorry.

25 COLONEL ORR: That's okay. Thank you.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 (Conversation away from microphone.)

2 COLONEL ORR: Is there anyone else who hasn't spoken that
3 would like to give comments now? All right.

4 MR. DANSBY: My name is Mike Dansby, D-A-N-S-B-Y, and I
5 just want to say that I support -- I work at the hatchery and I
6 support what everybody's said about the flyovers. I know for
7 sure that -- I mean I know if you drive by one of those
8 incubators and it -- even the truck throws a rock and hits one
9 of those incubators you've killed thousands and thousands of
10 fish. And that's not including the wild stock and what it's
11 doing to them because they're just as fragile and it's the same
12 time. So thank you very much.

13 COLONEL ORR: Thank you. Anyone else who has not spoken
14 would you like to make a comment at this time?

15 MS. MACCALLUM: Yeah, I might as well.

16 COLONEL ORR: All right.

17 MS. MACCALLUM: Oh. My concern too is with the hatchery.

18 UNIDENTIFIED MALE: Your first name, spell.....

19 MS. MACCALLUM: Oh, Nancy MacCallum. M-A-C capital C-A-L-
20 -L-U-M.

21 UNIDENTIFIED MALE: Okay.

22 MS. MACCALLUM: My concern -- my first concern is with the
23 hatchery. They are -- they do a wonderful job and they're a
24 very necessary part and they're a great part of our community.
25 And I also look as a lodge owner. As you can look around and

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

12

1 see, my windows. I would hate like a sonic boom to take out any
2 windows here for -- also with guests coming in here. We rely on
3 our summer business to get us through the winter because we are
4 open 365 days a year. And so, you know, if we get into being
5 known as complaints about people not being able to sleep here,
6 being scared, you know.

7 But again, I go back to the hatchery. The hatcheries are
8 wonderful neighbors of ours. They rent from us. They're great
9 people, they do a wonderful, wonderful job and I do not want to
10 see anything happen to their fish. Thank you.

11 COLONEL ORR: Thank you. Is there anyone else who has not
12 spoken that would like to speak at this time? All right. Is
13 there anyone who has already spoken that would like to
14 supplement their comments? Anyone? Okay.

15 MR. PETERSON: Tony Peterson, P-E-T-E-R-S-O-N. Again, I'd
16 like to enforce that I do support the training of our military,
17 but this area -- John Schandelmeier made a great point with a no
18 fly zone for a 10 mile radius. However, the entire Gulkana (ph)
19 River, Gakona (ph), Gulkana (ph), the entire system that is
20 supported not only by the hatchery but the wild sockeye and, as
21 they said, that they are so fragile for that 120 days out of the
22 year even in the wild stock. That loss would be a magnitude
23 that I could pretty much assume would be unimaginable. It would
24 devastate the commercial fishing, it would devastate the
25 personal fishing and it would devastate the subsistence fishing

KRON ASSOCIATES

Anchorage, Alaska 99503
(907) 276-3554

1 for the northern part, if not most of the central and southern

4 with this area. Thank you very much.

5 COLONEL ORR: Anyone else?

6 UNIDENTIFIED FEMALE: (Indiscernible).

7 UNIDENTIFIED MALE: (Indiscernible).

8 COLONEL ORR: (Indiscernible).

9 (Conversation away from microphone.)

10 COLONEL ORR: Anyone else? Well, all right. On behalf of
11 all current and future service members I'd like to thank you
12 again for your participation and input tonight. Alaskan Command
13 welcomes your review and comments on the analysis contained in
14 the Draft EIS. Again, written comments can be submitted by
15 filling out a comment form tonight or mailing it to the address
16 on the comment form. Comments may also be submitted via website

18 7th, 2012, to be considered in the Final EIS. If you haven't
19 already done so, we encourage you to look at the maps and other
20 displays around the room. These provide details on the

24 we're here tonight.

4 THE REPORTER: On the record, 8:22 p.m.

5 MR. PETERSON: Tony Peterson. As to the expansion area of
6 MOA 3 Paxson the suggestion would be to put a three mile
7 corridor to the east of the Gakona (ph), Gulkana (ph) River and
8 three miles west of the.....

9 UNIDENTIFIED MALE: Now (indiscernible) rivers. They all
10 start (indiscernible).

11 MR. PETERSON: Gakona, Gulkana. And three miles to the
12 east as well with a ceiling of 10,000 feet -- this area would be
13 open to 10,000 feet and above for exercises. The way to
14 designate this as a no fly zone is to put this as a kill zone
15 during activity. If they drop below 10,000 feet in this area,
16 in this no fly zone, then they would be essentially terminated
17 as far as the exercise goes.

18 COLONEL ORR: All right.

2 (On record at 7:02 p.m.)

3 COLONEL ORR: Thank you. This hearing tonight is
4 scheduled to end at 9:00 o'clock and if everyone who wishes to
5 have spoken to do so and you'd like an opportunity to expand on
6 your remarks you may have an opportunity, if the time permits.
7 Now if you don't feel comfortable standing up to make a
8 statement you can submit a written comment tonight using a
9 comment form. You can also submit comments until June 7th,
10 2012. And keep in mind that the written comments are given the
11 same consideration as the verbal comments offered here tonight.

12 Now to ensure that we have an accurate record of what we
13 have to say please help me by respecting the following ground
14 rules. First, speak clearly and slowly into the microphone.
15 Now this microphone does not amplify, but it goes right into the
16 tape recorder machine there. So we want to make sure that we
17 have an accurate depiction of what you've said. State only your
18 name and organization you represent, if that applies. Now
19 please do not provide any other personal information, such as
20 your home address or phone number. Your oral comments will be
21 recorded by the court reporter verbatim and used to develop a
22 transcript and permanent record of this meeting and will be
23 published as part of the Final EIS. The names of the
24 individuals making comments, as well as their comments, will be
25 disclosed in the Final EIS. Personal home addresses and phone

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 numbers will not be published.

2 Second, each person will be allotted four minutes to
3 speak. In order for each individual speaking to have the full
4 time allotted, audience members, please be respectful to the
5 opinions offered by your neighbors. If you anticipate your
6 comments will extend beyond the time allotted, please make the
7 most important comments first.

8 Third, if you have prepared a written statement you may
9 turn it in at the registration table or you may read it aloud if
10 you can do so within the four minute time limit.

11 Fourth, please honor any request that I make for you to
12 stop speaking when you've reached the four minute time limit.
13 The timekeeper will hold a yellow card when you have 30 seconds
14 left to assist you in knowing when your allotted time is almost
15 up so that you can comfortably conclude your remarks. When the
16 red card is displayed that means your four minutes are up and in
17 the interest of politeness and fairness to the others who wish
18 to speak the speaker is asked to stop speaking and return to his
19 or her seat.

20 Are there any questions before we begin? Our first
21 speaker for the night is Representative Eric Feige.

22 REPRESENTATIVE FEIGE: Okay. I guess for the record, I'm
23 Representative Eric Feige. I represent House District 12 which
24 includes most of the JPARC area that we're talking about. One
25 of the things I'd like the folks to address is the issue of the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 proposed floor for the Fox 3 MOA. Currently it's proposed to go
2 to 500 feet AGL and in talking to a number of the air taxi
3 operators, the pilots, for the record I'm -- I am a commercial
4 pilot with 17 years of bush flying experience here in Alaska.
5 I'm very familiar with the Talkeetna mountains and essentially
6 the rest of the Fox 3 MOA and do fly through it on a regular
7 basis in -- just in doing this job.

8 The area that really gets the most general aviation
9 traffic is the area sort of -- if you draw a line from about the
10 Susitna River across to the Alphabet Hills and south that area
11 seems to have the most -- the densest amount of general aviation
12 traffic, you know, mostly Supercubs and Cessnas and whatnot,
13 small float planes getting in and out of hunting cabins. It's
14 primarily during the non-winter months where you see a lot of
15 that traffic. It's during the, you know, primarily May to
16 October with a lot more activity occurring in the late August
17 through mid-October timeframe. It's kind of the highlight of
18 hunting season.

19 If that floor were to be raised to say 1,500 feet AGL or
20 at least a -- perhaps a new sector created within the MOA that
21 can be left off most of the time but only turned on when
22 absolutely necessary I think that would go a long way to
23 reducing some of the general aviation pilots' concerns about
24 basically getting run over by an F-16 or something larger. So
25 I'd ask that the folks putting this proposal together go ahead

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 and take a good long look at that.

2 I think alternative E where the southern boundary of the
3 Fox 3 MOA was -- instead of being south of Lake Louise it was
4 moved a little bit to the north so it only covered Tyone or Lake
5 Tyone or Lake Susitna I believe. Even if you move that southern
6 boundary in that sector to the outlet of Lake Susitna at the
7 very mouth of Tyone Creek that would be another good point to
8 put in there that would, again, relieve some of the concerns
9 that folks in the Lake Louise area have. And that's all I got
10 for now.

11 COLONEL ORR: Thank you.

12 THE REPORTER: Could you please spell your last name for
13 the record, sir?

14 REPRESENTATIVE FEIGE: It's spelled F-E-I-G-E and first
15 name is Eric with a C.

16 THE REPORTER: Thank you.

17 COLONEL ORR: Thank you. Our next speaker is Ms. Mary
18 Leith is it?

19 MS. LEITH: Leith.

20 COLONEL ORR: Leith. All right. Thank you.

21 MS. LEITH: I'm Mary Leith, Mayor of the city of Delta
22 Junction. And the city of Delta Junction wants to state that we
23 made a memorandum of agreement with the Army in '06 and upon
24 investigation it was essentially omitted from the full JPARC
25 Draft EIS and as a result we feel the EIS is -- the Draft EIS is

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 defective.

2 There -- will there be an amended version of this before a
3 final version -- of the EIS before a final version comes out is
4 something that we're concerned about. Because we think, again,
5 it should be available for public comments after we see -- after
6 you've heard what people are concerned with. We will object
7 JPARC -- to JPARC moving the Final EIS without this opportunity
8 for review and comment. We note that JPARC was provided with a
9 copy of the '06 MOA by -- at the scoping meetings and still
10 failed to address it in the Draft EIS.

11 Numerous commitments contained in the '06 MOA are violated
12 by the proposed changes in the Donnelly training area and other
13 portions of training ranges near Delta and Gulkana. A partial
14 listing of the violations will be included in our written
15 comments which will be coming. The failure to discuss these
16 violations and the necessity for them makes the EIS incomplete
17 and inaccurate.

18 The proposed changes violate many of the concerns
19 underlying the '06 MOA, including, but not limited to, danger
20 from wildfire which is a big concern in this area, danger from
21 flooding, public safety arising from increased levels of
22 activities and increased noise in the area. The issues are more
23 critical given the higher intensity levels of training, the
24 broader types of training and greater expanded use of the
25 training area. These issues are not addressed or inadequately

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 addressed in the Draft EIS.

2 When the city acquiesced to the inadequate use or ac --
3 Donnelly range expansion EIS in '06 it did so with the
4 commitment by USARAK that training at the Caktif (ph) and Backs
5 (ph) would be limited to those described in the supplemental EIS
6 prepared by USARAK. The city pressed for those facilities to be
7 located at the south end of the Donnelly training area. USARAK
8 pressed for a location at the north end of the Donnelly training
9 area immediately joining city limits. We did much of this based
10 upon our own experience with fire only a little bit prior to
11 that. The compromise described in the 2006 MOA is that the city
12 would acquiesce to the closer, more dangerous location, but only
13 with safeguards and with the Army's assurance that the training
14 activities would be limited to those described in the
15 supplemental Draft EIS. The JPARC Draft EIS fails to address
16 that bargain or JPARC's reasons for violating the bargain.
17 Which we searched it, there -- it was never mentioned once.

18 These comments to the public hearing are not a complete
19 list of our concerns. Complete written comments will be
20 submitted to you by June 7th, 2012, but unless these issues are
21 fully addressed in a supplemental Draft EIS it's more likely
22 than not that the city will challenge the adequacy of the JPARC
23 Draft EIS leaving aside any claim by the city for breach of the
24 '06 MOA. And if we have any -- like I say, we really do expect
25 to see again the Draft EIS so that -- you know, amended one so

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 that we can indeed see if that is finally remembered that we did
2 have a mem -- an MOA with everybody. And my last name is
3 spelled L-E-I-T-H.

4 COLONEL ORR: Thank you.

5 MS. LEITH: Uh-huh (affirmative).

6 COLONEL ORR: Our next speaker is Ms. Judy Olson Hicks.
7 Got it?

8 MS. OLSON HICKS: Uh-huh (affirmative). I am Judy Olson
9 Hicks and I represent just me. But as a citizen of Delta I know
10 that tonight is a major scheduling conflict for our small town
11 in that it is high school graduation and so many of the leaders
12 in our community are not available to come here tonight. I also
13 noticed that there were no signs posted up at our grocery store
14 where everyone goes or at our post office about this meeting.
15 There was nothing published on our website about this meeting or
16 in our local newspaper. So I feel as if trying to engage the
17 public in this very important meeting was not really done in
18 earnest or not done with truly getting to know who we are.
19 Thank you.

20 COLONEL ORR: And could you spell your name.....

21 MS. OLSON HICKS: Yes.

22 COLONEL ORR:for the.....

23 MS. OLSON HICKS: J-U-D-Y, O-L-S-O-N, H-I-C-K-S.

24 COLONEL ORR: Thank you. All right. Those are all the
25 comment cards that I have. Is there anyone that has not spoken

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 who would like to do so at this time? Yes, sir.

2 MR. QUARBERG: I turned a card in, it already got lost.

3 Maybe that's an omen.

4 COLONEL ORR: Oh, you know what? Whoa, whoa, whoa. Are
5 you Don?

6 MR. QUARBERG: That's it.

7 COLONEL ORR: Okay. (Indiscernible), that's my fault.

8 MR. QUARBERG: My name is Don Quarberg, Q-U-A-R-B-E-R-G.
9 I'm a private pilot and a hunter and I'm here to represent
10 myself. But maybe what I have is a request and some
11 observations, but, you know, I preface this with saying that we
12 appreciate everything you fellows do. Not only fellows, Armed
13 Forces Service. We don't want to jeopardize your mission and
14 training and we want you to be the best prepared that there are
15 when we ask you to step into harm's way and so we all appreciate
16 that.

17 Game Management 20A which is out here to the west of Delta
18 and south of Fairbanks is one of the most intensively managed
19 game management units in the state. It currently has a very
20 healthy population of most -- in fact you could probably pick up
21 a Sports Afield or a Petersen's Hunting magazine and read about
22 20A in there. As I look at the EIS and what is planned for that
23 activity, and I've hunted over there for over 30 years. It's
24 beautiful, nestled in between Mount Hayes and Mount Moffit where
25 I go and it looks like it's over. Unless we look at all the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 opposition, if you will, I don't even know what's controlled
2 opposition, people that have concerns as Representative Feige
3 mentioned over on Lake Louise and the pilots and things like
4 that. This area is accessed by a number of air taxis and
5 transporters, it's accessed by a number of guides, it's accessed
6 by a whole array of private hunters and recreators of which the
7 military is well represented. I hate to lose that and I wish we
8 could share it and I think we can. And the way we can share
9 that is if there was some way we can impress upon the military
10 to maybe adjust their scheduling just -- because I would guess
11 that 90 some percent of the use over there, recreational use, is
12 during the month of September, maybe from August 15th on. And
13 Range Manager Sharp that retired from Fort Greely was a hunter,
14 like probably all of you are. He had the ability to schedule
15 maintenance on the range during September. An OCA who was in a
16 Cub could putz around out there, you know, and go hunting and
17 whatever we had to do and we didn't conflict with anybody. Past
18 couple of years we've had a little bit of an off flavor with the
19 scheduling because we've had people that schedule years in
20 advance, for example, especially with commercial operators.
21 With me it's my relatives coming up when we go hunting. And
22 they're sitting there with airline tickets and all of a sudden
23 they close it, the air space is closed. And that's the way we
24 get in there. Most of that's all fly in. And then of course we
25 call Representative Feige or Murkowski or whatever happens and

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

11

1 Then the day before hunting season they open it back up again,
2 but that really didn't help the person that changed their
3 ticket. I mean they lost that opportunity.

4 And I don't know who to ask, but I think there's some
5 pretty good minds in here that could probably get that to the
6 right place. And so if there's any way possible to schedule
7 this. You know, in addition to us flying around, at that time
8 there's lots of cranes and waterfowl and things like that and
9 it's a little bit hazardous too, even for us, you know. We
10 don't -- they can almost out fly me, so they can get out of my
11 way but not with an F-16 or a 22. I guess that's, you know, the
12 gist of my request is look at scheduling, see if there isn't
13 some way we can accommodate both of us. Thank you.

14 COLONEL ORR: Thank you. Is there anyone else who hasn't
15 spoken that would like to speak at this time? Is there anyone
16 who has already spoken that would like to supplement their
17 comments? Anything else? Mayor?

18 UNIDENTIFIED MALE: I have a question (indiscernible). Is
19 this -- no, it's -- I'm not making comments. Mary was asking
20 for review of the Draft before its final draft. Is this the
21 last public comment opportunity I mean other than written
22 comments (indiscernible)?

23 COLONEL ORR: You have to talk to the folks back there on
24 that one.

25 UNIDENTIFIED MALE: Mike, you want to (indiscernible)?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 UNIDENTIFIED MALE: (Indiscernible) question.

2 UNIDENTIFIED MALE: He's going to come up.

3 MR. MASLYK: Thank you. Would you please repeat your
4 question again?

5 UNIDENTIFIED MALE: Is this the last opportunity for
6 public comment on this before the record of decision?

7 MR. MASLYK: First of all, my name is Lou Maslyk and I am
8 with SAIC, Incorporated, and we are a contracting group that has
9 been hired by the Army and the Air Force to help prepare the
10 Draft -- or the EIS. Right now we are at the draft stage and
11 the next phase of the process will be the preparation of the
12 Final EIS which is due towards the end of this year or early
13 next year. And that -- and when the Final EIS has been approved
14 by the Army and the Air Force there will be a Notice of
15 Availability published in the Congressional Federal Register,
16 just as there was with the Draft EIS, to let folks know that the
17 final has been prepared. There will be 30 day waiting period
18 once the final -- once the Notice of Availability has been
19 prepared where people, that they can request -- during this
20 period they can request copies of the Final EIS to review and
21 still issue comments and it will be, you know, up to the Air
22 Force and the Army to review the comments. So no, the answer is
23 no, you -- there will be another period to review the Final EIS.
24 And then the next phase after that is the preparation of the
25 record of decision. Does that answer your question?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

13

1 UNIDENTIFIED MALE: I think so. So those comments on the
2 final will still be considered in the record of decision.

3 MR. MASLYK: That will be up to the Army and the Air Force
4 to make those -- to make that decision. But there will be a 30
5 day period in which the public and agencies have a 30 day
6 opportunity to review the Final EIS. Ma'am.

7 UNIDENTIFIED FEMALE: There won't be any supplemental --
8 even if you find large things that need altered and again seen
9 by the public?

10 MR. MASLYK: That is a possibility, yes, ma'am, but,
11 again, that will have to be decided by staff of the Army and the
12 Air Force. And it would not be a supplemental EIS, it would
13 still be the Final E -- no, it would still be a Final EIS with
14 significant -- potential significant revisions. And there are
15 requirements under Council of Environmental Quality and also Air
16 Force and Army NEPA regulations that could allow for an
17 additional public review and comment period. Those are
18 definitely in the Army and the Air Force regulations, but,
19 again, those would have to be decided by, you know, command
20 elements of the Army and the Air Force. Sir.

21 UNIDENTIFIED MALE: Is it typical for the permittee or the
22 person filing the -- for the permit to have the final decision
23 on the....

24 MR. MASLYK: The permit?

25 UNIDENTIFIED MALE: Right, the Army and the Air Force are

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 the ones who (indiscernible).

2 MR. MASLYK: Oh, they are the -- they are con.....

3 UNIDENTIFIED MALE: Is it normally the EPA that would be
4 making the decision whether or not it would be heard or
5 reopened?

6 MR. MASLYK: The EPA does have a role in the review
7 process, but they do not make the final decision. The final
8 decision is made by command elements of the Army or the Air
9 Force as joint lead agencies for this EIS. Under the current
10 NEPA implementing regulations. Any other questions? Here you
11 go, sir.

12 COLONEL ORR: Thank you. Would anyone else like to make
13 additional comments?

14 MR. MUSGROVE: (Indiscernible).

15 COLONEL ORR: Sure.

16 THE REPORTER: Could I ask you to spell your name for the
17 record?

18 MR. MUSGROVE: Yeah. Jay W. Musgrove, M-U-S-G-R-O-V-E.
19 I'd like to echo Don Quarberg. We're glad that -- for the
20 opportunity to make a comment and all the effort that they have
21 obviously put into this. Some people don't agree with pieces
22 and parts of it, but I personally appreciate the fact that we
23 have a military and we want them to keep strong and capable.
24 And of course at any -- sometime in the future what they may
25 need as far as equipment will change and that's something that

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

15

1 we don't really know. So I can see why it would be -- it would
2 -- might look like something of a land grab because they're not
3 really sure what their capabilities might require at some time
4 in the future. But I personally don't feel that it's going to
5 be that large of an effect on, you know, most little guys. And,
6 you know, when it comes to the bigger airlines or the -- say the
7 air taxis that do emergency flights, I think they've got some
8 provisions to take care of most of that. So I don't see a
9 really big problem with this personally. Thank you.

10 COLONEL ORR: Thank you.

11 (Whispered conversation)

12 COLONEL ORR: Any additional comments? Yes, sir.

13 MR. QUARBERG: May I make a request?

14 COLONEL ORR: You may.

15 MR. QUARBERG: (Indiscernible). As long as I don't have
16 to do anything. This is Don Quarberg again. My request this
17 time is to the Army and it -- I made some comments earlier about
18 the Eielson range control and that special use airspace
19 information service that they have where we can call an 800
20 number and talk to them in the air. And, you know, they'll
21 really accommodate us pilots that are flying around because if
22 the 16s or 15s or whatever it is are out of the way they'll tell
23 us how long is it going to take you to get across there and I
24 tell them 35 minutes. You can hear them gasp a little, you
25 know, but they'll say go ahead but call us when you get there

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 and of course you don't ever forget that because they'll -- be
2 out there with them.

3 But the -- what I really want -- would like from the Army
4 is they will take -- a prime example is restricted area 2202
5 alpha out here and that's where they're apparently flying these
6 UAVs. And they will inform the Air Force that this -- they're
7 going to be hot, active, tonight from 5:00 o'clock to forever
8 and it'll be that way sometimes through Monday or Tuesday. You
9 know, and I realize I can't hear one, can't hear much anyway,
10 but -- and you can't see them. So after awhile it's kind of
11 like hollering wolf, you know, I don't think anybody's out
12 there. But the Air Force will let us through, you know, they
13 know the current status. And I don't know what the
14 complications are to be able to provide the same kind of
15 service, but if you could do that it would be deeply
16 appreciated. Thank you.

17 COLONEL ORR: Thank you. Is there anyone else that would
18 like to make a public comment? Yes, ma'am.

19 MS. FARRAR: I'd just like to (indiscernible).

20 COLONEL ORR: Okay.

21 MS. FARRAR: (Indiscernible). I'm Dianna Farrar. Dianna
22 Farrar, F as in Frank, F-A-R-R-A-R, Dianna, and I'm a resident
23 of Delta Junction and I'm just speaking for myself. And I grew
24 up here and it's been an uneasy partnership with the military
25 most of the time because we had different goals and different,

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 you know, directives. And I do appreciate the military and I
2 thank the young men for their service to our country, but I
3 would like to feel that we had more respect for each other in
4 these kind of proceedings that what we say will actually be
5 heard. I have some of the same concerns that other people
6 mentioned tonight and wildfires are definitely one of them. At
7 times the military will choose not to fight a wildfire that they
8 may or may not have caused across the river with ordinance fire
9 and that's -- it's not threatening the town or anything, but it
10 can -- it impacts our air quality and over the course of a
11 summer, depending on how many fires happen, air quality can be a
12 significant thing in Alaska. You don't -- you know, you don't
13 think about that, but wildfire season is -- can be pretty
14 hazardous for people with any young children or respiratory
15 problems, allergies and stuff.

16 I'm concerned with access and use of the -- to the Granite
17 Mountain area between the Richardson Highway and the Alaska
18 Highway. This is a great subsistence and recreational use area
19 that I hope will remain open to the public and area residents.
20 It's really my strongest hope that this -- the reservation of
21 Fort Greely not expand anymore southward into that area because
22 it's already pretty close. And, you know, we're out there in
23 the fall, I'm out there berry picking and fishing when Don's
24 hunting. So it's just a great area. Noise is some concern, but
25 I would have to say it would be access and wildfire for me.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Thank you very much.

2 COLONEL ORR: Is there anyone else? All right. Well, on
3 behalf of all current and future service members I would like to
4 thank you again for your participation and input tonight.

5 Alaskan Command welcomes your review and comments on the
6 analysis contained in the Draft EIS. Again, written comments
7 can be submitted by filling out a comment form tonight or
8 mailing it to the address on the comment form. Comments may
9 also be submitted via the website or by fax. All comments must
10 be postmarked or received by June 7th, 2012, to be considered in
11 the Final EIS. If you haven't already done so, we encourage you
12 to take a look at the maps and other displays around the room.
13 These provide details for the individual proposals and we will
14 have someone at each station to answer your questions. We
15 appreciate your time and interest in the JPARC and welcome your
16 comments. That's why we're here today.

17 This hearing is adjourned. Please have a safe trip home.

18 THE REPORTER: Off the record, 7:31 p.m.

1 P R O C E E D I N G S

2 (On record at 12:00 p.m.)

3 THE REPORTER: On the record at 12:00 noon.

4 COLONEL ORR: Could I ask everyone to take -- please take
5 their seats?

6 (Pause)

7 COLONEL WARING: Ladies and gentlemen, can I have your
8 attention please? We're going to start the public comment
9 portion of this. (Indiscernible) attention please, we're going
10 to start the public comment portion of this. We'd like you to
11 keep your voice down. If you have a question (indiscernible)
12 interrupt anything with the court reporter.

13 COLONEL ORR: All right. This hearing is scheduled to end
14 at 2:00 o'clock this afternoon and if anyone who wishes to do so
15 has spoken and you would like the opportunity to expand on your
16 earlier remarks you may have the chance, if time permits. If
17 you do not feel comfortable standing up to make a statement you
18 can submit a written statement -- submit a written comment here
19 tonight using a comment form. You can also submit comments
20 until June 7th, 2012. Keep in mind that written comments are
21 given the same consideration as verbal comments offered here
22 this afternoon.

23 To ensure that we have an accurate record of what you have
24 to say please help me by respecting the following ground rules.
25 First, please speak clearly and slowly into the microphone and

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 state only your name and organization you represent, if that
2 applies. Please do not provide any other personal information,
3 such as your home address or phone number. Your oral comments
4 will be recorded by a court reporter verbatim, used to develop a
5 transcript and a permanent record of this meeting and will be
6 published as part of the Final EIS. The names of the
7 individuals making comments, as well as their comments, will be
8 disclosed in the Final EIS. Personal home addresses and phone
9 numbers will not be published.

10 Second, each person will be allotted four minutes to
11 speak. In order for each individual speaking to have the full
12 time allotted, audience members, please be respectful of the
13 opinions offered by your neighbors. If you anticipate your
14 comments will expand beyond the time allotted, please make the
15 most important comments first.

16 Third, if you have prepared a written statement you may
17 turn it in at the registration table or you may read it out loud
18 if you can do so in the four minute time limit.

19 Fourth, please honor any request that I make for you to
20 stop speaking when you've reached the four minute time limit.
21 The timekeeper will hold up a yellow card when you have 30
22 seconds left to assist you in knowing when your allotted time is
23 almost up so that you can comfortably conclude your remarks.
24 When the red card is displayed that means your four minutes are
25 up and in the interest of politeness and fairness to others who

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 wish to speak the speaker is asked to stop and return to his or
2 her seat.

3 Are there any questions concerning the ground rules? All
4 right. Then we are now ready to begin. The first speaker this
5 afternoon is Mr. Jay Harris.

6 MR. HARRIS: Is this the microphone? Yes.

7 COLONEL ORR: It doesn't amplify, it just records.

8 MR. HARRIS: It doesn't amplify? Okay. Yes, I'm here
9 today in protest of civilians being killed by drone attacks in
10 Pakistan. I think that this should be addressed in this forum.
11 My concern is that much of the testing that is being done isn't
12 taking into account the need to protect civilians in battle
13 zones and it's really my opinion that sometimes drones are
14 misused to actually depopulate areas of northern Pakistan and I
15 hope that this will be addressed today. Thank you.

16 COLONEL ORR: Our next speaker is Chris White.

17 UNIDENTIFIED FEMALE: He just stepped out, sir.

18 COLONEL ORR: Okay.

19 UNIDENTIFIED FEMALE: (Indiscernible).

20 COLONEL ORR: All right. Mr. Al Barrette.

21 MR. BARRETTE: Thank you for this opportunity. I would
22 just like to point out that the federal government owns 67
23 percent of the lands in Alaska currently and I understand that
24 the whole ordeal about having this added access is because the
25 federal government and those people that manage those lands do

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 not want to create anymore ordinance drops and so they want to
2 ask Alaskans to give up some of their lands and their airspace
3 to provide the safety for all Americans to support our men and
4 women who honorably defend our freedoms. I think we ought to be
5 asking the federal government to do the same and since they own
6 67 percent of Alaska that they could create a few more drop
7 zones on their land and allow their activities and their
8 training for our soldiers. Thank you.

9 COLONEL ORR: All right. Our next speaker is Ms. Anna
10 Godduhn.

11 MS. GODDUHN: Thank you. Do appreciate the opportunity.
12 Hello? Okay. The mic's not working, so I'll just talk loud.

13 COLONEL ORR: No, it doesn't amplify, it just records.

14 MS. GODDUHN: Oh, it's a recorder. Okay.

15 COLONEL ORR: Right.

16 MS. GODDUHN: You probably said that before. I don't have
17 comments prepared and I regret that because I understood and
18 last year for the scoping meetings the public comments were
19 taken in a closet, so I wasn't inspired by that. So I didn't
20 write these comments down, but I do object to this expansion on
21 both local and global grounds. I personally find the sounds of
22 fighter jets and bombs dropping very, very deeply disturbing.
23 And I can hear them from my house way out in northwestern
24 Fairbanks and I'm on the other side of campus, you know, well
25 away from Wainwright. But I can hear those bombs and it is

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 disturbing, but that is certainly not why I object to this
2 expansion. I -- mostly on the same grounds as Jay and some of
3 the other folks here do not see our need for predator drones. I
4 do not see assassination and targeted killings that do just
5 happen to kill a lot of civilians as well as an appropriate
6 method of dialogue with the world. I really think we need more
7 peaceful methods and I don't think we need more predator drones
8 that are indiscriminate and lethal. And pretty bad for the
9 pilots who do the job too. The guys who are running these drone
10 strikes from Arizona and Texas are not in real good shape. And
11 the lie that we put to our kids when they're young and want to
12 fly airplanes that they should join the Air Force and be trained
13 as pilots is just another fallacy. Thank you.

14 COLONEL ORR: Thank you. Our next speaker is Mr. Robert
15 Mulford.

16 MR. MULFORD: Thank you. I have spent much of the last
17 two and a half years or so attending conferences as a systems
18 integrator engineer at The Institute for Defense and Government
19 Advancement conferences. I've been briefed by generals like
20 General Peter Chiarelli, General Michael Vane, heads of DARPA,
21 et cetera, on some of the new technologies that I think your
22 JPARC expansion is going to be using.

23 You talk in your preamble about these technologies. These
24 are pretty horrific technologies. They're very invasive and
25 they're also very destructive and there's no way to protect

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 civilians from them. And they also find use inside Homeland
2 Security in the United States. I've heard the head of the
3 Department of Homeland Security's commercialization department
4 say to a group of Lockheed Martin and Raytheon (ph) people, hey,
5 you write a 10 page white paper, you can get \$20 million to
6 design some of these anti-terrorism systems. This is all linked
7 together.

8 And your weapons, your drone operators, your drone
9 navigation operations and your drone sensor controls, all this
10 are all based on commercial off the shelf technologies. These
11 are technologies that anybody, a kid with facial jewelry, can
12 learn how to program. You know that it's going to be -- there's
13 going to be proliferation of these technologies and I'll bet you
14 that is why we now have a cyber command in the United States.
15 This is going to come home to us in the United States. This
16 network centric warfare that your -- Admiral Cebrowski started
17 years ago and what your doctrine is all about is going to come
18 home to bite the people in this country. And I'm sure opposed
19 to it and if I can stop you any way and how I'm going to. Thank
20 you.

21 COLONEL ORR: All right. Our next speaker is Mr. Luke
22 Hopkins.

23 MR. HOPKINS: Yes, thank you. Luke Hopkins, Fairbanks
24 North Star Borough, the Mayor. So I will be submitting written
25 comments that would be much more extensive. I don't have those

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 formulated at this time. I do want to state though that I am
2 disappointed that this public hearing is on a Saturday, has been
3 scheduled here in Fairbanks, one of the major -- the second
4 largest community in Alaska, that it was scheduled for Saturday.
5 There are two sessions, I understand that, but Saturday night is
6 not a good time to have a public hearing. So I'm hoping that if
7 there are further public hearings held in this overall process
8 that they are scheduled in Fairbanks. We have the best turnout
9 and information dissemination on weekdays and I would ask that
10 that please be put into any further scheduling. I don't think
11 it's appropriate to have a -- as I said, a public hearing on
12 this issue on Saturday noon, especially in the summer. Thank
13 you.

14 COLONEL ORR: Thank you. Our next speaker is Mr. Tom
15 Lamal.

16 MR. LAMAL: My name is Tom Lamal and the comments I have
17 to make are mostly on the Paxson area for pilots. And I would
18 like to see for this area for safety reasons two corridors in
19 the area, one down the Richardson Highway that's high enough
20 that if there's turbulence that private pilots can get out of
21 that and also wide enough that if there's snow squalls or
22 thunderstorms that they have enough room to maneuver around
23 those. Also another corridor I'd like to see is on the Denali
24 Highway going more east and west from Paxson over to Denali Park
25 and also wide and high enough for safe flying for private

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 pilots. And another area on the Paxson would be towards Tok
2 that if the area was drawn farther away from the highway, maybe
3 to the foothills of the Alaska Range, so that safe passage could
4 happen along there and maybe have it up to an elevation of the
5 foothills of 5,000 feet or something like that, I'm talking
6 about ground elevation, so that people could fly towards the
7 Canadian border without having air restrictions along that area.
8 If that was pulled in I think it would make it a lot easier for
9 people to travel back and forth, myself included. Thank you
10 very much.

11 COLONEL ORR: Thank you. Our next speaker is Mr. Chris
12 White. Right over here, sir.

13 MR. WHITE: My name is Chris White. I've been up in --
14 living here in Alaska for 30 or 40 years and I like to hunt and
15 trap and fish and I'm kind of concerned how this is going to
16 affect the people who hunt and fish in that area. So I hope as
17 soon as you can get that thing sorted out because if you have to
18 restrict that area we'd like to know what these restrictions are
19 before we go along with this thing.

20 Another concern that I have is that if this -- using these
21 drones, it doesn't seem to be too good for the people that get
22 hit by them and it seems there's quite a few where it's been
23 used kids are getting killed because of the inaccuracy of these
24 things. But apparently it gets accurate enough, sometimes it
25 isn't. So people -- my concern would be that when the military

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 starts using this stuff it'll start using them on civilians.
2 When the business communities come together with your military
3 communities we end up getting more authoritarian type government
4 and that's on a road to fascism. You got to be careful with
5 that slide because we don't want to live and lose the republic
6 that way.

7 So that's another concern I have, not just the hunting and
8 the fishing and the trapping, but how big of an area are you
9 going to be taking over in square miles to do these exercises.
10 And we're kind of concerned you might have the people on the
11 other side getting hit with this stuff regard us as terrorists
12 and if we start mirroring that way of doing business with drones
13 just dropping out of the sky, boom, if we start mirroring their
14 behavior. And we've seen this with, you know, our government
15 with torture even. They actually think it was okay at one
16 point. If we start seeing us going that was this is not good
17 for the republic.

18 So besides hunting and fishing and trapping in those areas
19 you're about to use is also the broader issue is this going to
20 harm the republic as we know it. That's my concern, sir.

21 COLONEL ORR: Thank you. All right. Those are all the
22 comment cards that I have for this afternoon. Is there anyone
23 else who did not submit a comment card that would like to speak
24 at this time? Sir, if I could, when you begin could I ask you
25 to spell -- say your name and then spell your name for the court

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 reporter?

2 MR. OSBORN: Hi. My name's Phil Osborn. I've been here
3 40.....

4 COLONEL ORR: Could you spell it for him please?

5 MR. OSBORN: O-S-B-O-R-N. I've been here 45 years and
6 I've come to love this place a great deal. My concern today is
7 that I believe firmly that our nation is in decline. We are a
8 hair breath away from insolvency in so many areas. I think
9 there's no business whatsoever expanding the military presence
10 in our state at this critical time. We need money for people
11 and what they need, not to fight a phantom enemy which doesn't
12 exist. There's no state actor in today's world that demands our
13 high level of technology. That's a fallacy. So I would say I'm
14 categorically opposed to expanding JPARC and that's a big thumbs
15 down to JPARC.

16 COLONEL ORR: Thank you. Anyone else that hasn't already
17 spoken? Is there anyone who has already spoken that would like
18 to expand their comments? You may do so at this time? Can you
19 please state your name before you begin again?

20 MR. HARRIS: I'm John Harris and I had a few comments to
21 add to my prior comments. I want to remind everyone here that
22 the media grossly misrepresents the use of drones and their use
23 in Pakistan. The evidence that I've been able to gather clearly
24 indicates that the drones are being used for much more than
25 isolated targeting of particular individuals. I believe that

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

12

1 they're being used to actually depopulate north Pakistan and I
2 think that more attention should be brought to this issue and
3 this forum. Thank you.

4 COLONEL ORR: Is there anyone else? Okay. On behalf of
5 all current and future service members I would like to thank you
6 again for your participation and input this afternoon. Alaskan
7 Command welcomes your review and comments on the analysis
8 contained in the Draft EIS. Again, written comments can be
9 submitted by filling out a comment form this afternoon or
10 mailing it to the address on the comment form. Comments may
11 also be submitted via the website or by fax. All comments must
12 be postmarked or received by June 7th, 2012, to be considered in
13 the Final EIS. If you haven't already done so, we encourage you
14 to look at the maps and other displays around the room. These
15 provide details on the individual proposals and we will have
16 someone at each station to answer your questions. We appreciate
17 your time and interest in the JPARC and we welcome your
18 comments. If you think of something during the course of the
19 day that you would like to say later we're going to reconvene
20 another hearing this afternoon.

21 Thank you for your time and participation. This hearing
22 is adjourned.

23 THE REPORTER: Off record, 12:25 p.m.

24 (Off record at 12:25 p.m.)

25 (On record at 12:38 p.m.)

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 THE REPORTER: Back on the record at 12:38 p.m. Please
2 state your name one more time please.

3 MR. WHITE: Yes. My name is Chris White and I mentioned
4 in my comments previously about an area that I was concerned
5 about and the area I was specifically concerned about was the
6 Tanana Flats and the -- well, I'm actually concerned about all
7 of the area that the JPARC or Range Complex covers and what
8 restrictions will be put on the citizens and how will we -- will
9 we have to sign up to hunt in these areas? This is prime
10 hunting and trapping areas and the -- many people are going to
11 be concerned if you start closing this off to -- or restricting
12 us too much out of it. That would not be good. So those are
13 the areas I mentioned in my previous comments regarding the
14 hunting, fishing and trapping in those areas.

15 COLONEL ORR: All right. Thank you.

16 UNIDENTIFIED MALE: That should do it.

17 THE REPORTER: Off the record, 12:39 p.m.

18 (Off record at 12:39 p.m.)

19 (On record at 6:05 p.m.)

20 THE REPORTER: On the record, 6:05 p.m.

21 COLONEL ORR: Okay. Is it going? You good?

22 (Pause)

23 COLONEL ORR: All right. Could I ask you all please take
24 your seats? Thank you. This hearing is scheduled to end at
25 8:00 o'clock this evening and if anyone who wishes to do so has

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 spoken and you would like an opportunity to expand your remarks
2 you may do so if that chance -- you have that chance if time
3 permits. If you do not feel comfortable standing up to make a
4 statement you can submit a written comment here tonight using a
5 comment form. You can also submit comments until June 7th,
6 2012. Keep in mind that written comments are given the same
7 consideration as verbal comments offered here tonight.

8 To ensure that we get an accurate record of what you have
9 to say please help me by respecting the following ground rules.
10 First, speak clearly and slowly into the microphone and state
11 only your name and any organization you represent, if that
12 applies. Please do not provide any other personal information,
13 such as your home address or phone number. Your oral comments
14 will be recorded by a court reporter verbatim, used to develop a
15 transcript and permanent record of this meeting and will be
16 published as part of the Final EIS. The names of the
17 individuals making comments, as well as their comments, will be
18 disclosed in the Final EIS. Personal home addresses and phone
19 numbers will not be published.

20 Second, each person will be allotted four minutes to
21 speak. In order for each individual speaking to have the full
22 time allotted, audience members, please be respectful of the
23 opinions offered by your neighbors. If you anticipate your
24 comments will extend beyond the time allotted, please make the
25 most important comments first.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Third, if you have prepared a written statement you may
2 turn it in at the registration table or you may read it out loud
3 if you can do so within the four minute time limit.

4 Fourth, please honor any request that I make for you to
5 stop speaking when you reach the four minute time limit. The
6 timekeeper will hold up a yellow card when you have 30 seconds
7 left to assist you in knowing when your allotted time is up so
8 that you can comfortably conclude your remarks. When the red
9 card is displayed that means the four minutes are up and in the
10 interest of politeness and fairness to others who wish to speak
11 the speaker is asked to stop and return to his or her seat.

12 Are there any questions concerning the ground rules before
13 we begin?

14 UNIDENTIFIED MALE: Colonel Orr, sir, have you made it
15 clear that that microphone does not amplify, it only goes to the
16 court reporter?

17 COLONEL ORR: I have not, but you just did. This
18 microphone over here does not amplify. Well, there being no
19 other questions we are now ready to begin and the first speaker
20 for tonight is Rasool Ameen. Is that -- all right.

21 THE REPORTER: Sir, could you please spell your last name,
22 state your name and spell your last name?

23 MR. AMEEN: My name is Rasool Ameen, last name A-M-E-E-N.
24 All right. Good evening everybody, thank you. I guess my main
25 concern is the unmanned drones. That's my main concern. I

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 already know of several places in the United States where drones
2 are being used to gather intelligence on American citizens. Now
3 I understand the need for this as far as military training and
4 everything, but nothing in the world is constant. We don't live
5 in a vacuum and everything that's happening in our country and
6 around the world is connected. We're seeing more and more
7 people overseas who are discontented. We're seeing in our own
8 country discontented people. I mean I was watching PBS news
9 hour last night and the Congress just passed a huge defense
10 bill. Now I understand we need a strong defense, we do, but
11 we're living in a time where we just came through an economic
12 collapse where they're -- many of our fellow citizens are
13 hurting. I mean the latest figures, over 46 million people are
14 out of work. There's a lot of discontented people. We see that
15 on the news, we see that in protests, we see that in things that
16 are happening.

17 So my biggest fear is I understand that this is right now
18 being used militarily, but, you know, it's happened before in
19 history and I see it happening again, that we have a lot of
20 citizens who are discontented and if this technology is already
21 being used to gather intelligence on our fellow citizens who
22 decides -- who is deciding what is a threat. I mean who makes
23 the decision that says an American citizen is a threat? And if
24 we're using this technology on citizens what's to stop us from
25 using other tactics?

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 I mean I remember reading a story in 2002 about the -- I
2 believe it was Vice President Chaney at the time, I don't -- you
3 know, I don't know, but I read a story about in Buffalo, New
4 York, they were considering sending in Delta Force on American
5 citizens and when I read that I was like wow, this is -- I don't
6 know, this is strange. And I really hope that, you know, we ha
7 -- we as a country do not allow ourselves to become so paranoid
8 that we find it necessary to use this technology on our own
9 citizens because I -- everything that I've seen what's going on
10 in the world, I don't see it getting any better. I don't see
11 our economic situation getting any better. Europe is already
12 desperately in need of help as far as the Euro is concerned and
13 that's just going to come over here. So I mean there's a lot of
14 potential for a lot of bad things to happen and I guess I'm just
15 hoping and praying that these things are not abused 20, 30, 40
16 years down the road, you know, when things do collapse here.

17 I mean take a look at Hurricane Katrina for example. You
18 know, that was a natural disaster and you had cops, you know,
19 pretty much well meaning people, I'm sure when they joined the
20 force, you know, were shooting American citizens. And this was
21 a natural disaster. This wasn't an economic collapse, this
22 wasn't, you know, hey, I can't put gas in my car anymore because
23 there's no more gas flowing. You know, this was a natural
24 disaster so I can only imagine with all of this technology we
25 have when our society does get to that point, you know, do we

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 have assurances that our own technology will not be turned on
2 our own people. That's what frightens me about all of this.

3 As far as seeing this thing here about a helmet on the
4 head of somebody sitting at a computer controlling drones, you
5 know, is there going to be any psychological tests for the
6 people who are controlling these drones? I mean what are the
7 safeties? What are the stop gaps here?

8 As far as the socioeconomic impact on Alaska, I mean, you
9 know, we've al -- we're -- I mean -- okay.

10 COLONEL ORR: Thank you. Hold that thought because I
11 think you'll have more time later. All right? All right. The
12 second speaker is Mr. Robert Mulford.

13 MR. MULFORD: My name is Robert Mulford, M-U-L-F-O-R-D.
14 I'm a local organizer for Veterans for Peace. In the counsels
15 of government we must guard against the acquisition of
16 unwarranted influence, whether sought or unsought by the
17 military industrial complex. The potential for the disastrous
18 rise of misplaced power exists and will persist. We must never
19 let the weight of combination endanger our liberties and
20 democratic processes. We should take nothing for granted. Only
21 alert and knowledgeable citizenry can compel the proper
22 messaging of the huge industrial military machinery of defense
23 with our peaceful methods and goals so that security and liberty
24 may prosper together. President Dwight David Eisenhower in his
25 farewell address to the nation, January 17th, 1961.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 I appreciate the courage of you men in uniform. I wore
2 the uniform myself. I was never in combat, but I appreciate
3 your courage. I understand -- I do understand your courage, but
4 I want to speak real briefly about the courage of another man
5 and another type of courage. Three weeks ago I attended a pre
6 court-martial hearing of a young PFC who exhibited a different
7 kind of courage. I only hope that down the road if you men
8 realize -- come to realize that the misplaced power, the
9 disastrous rise of misplaced power is not only a potential, but
10 it exists in these technologies and these policies that are
11 based on these technologies. That you find the courage within
12 yourself to do much the same thing that that brave young PFC,
13 Private Bradley Manning (ph), did and help save this country
14 from this disastrous rise of misplaced power. Thank you.

15 COLONEL ORR: All right. That concludes all the comment
16 cards that I have at this time. Is there anyone who hasn't
17 spoken that would like to make a comment at this time? All
18 right. Is there anyone who has already spoken that would like
19 to expand their remarks? Come on.

20 MR. AMEEN: Okay. Just briefly. As far as the -- I'm
21 coming back to the drones again because I'm sure we've all seen
22 it on the news, we've all read the reports. I mean even using
23 it militarily there are mistakes that are made by these drones.
24 And my con -- my big concern about it is we haven't perfected
25 this technology, but we're pushing forward with it. We're still

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 using it and we haven't perfected it. I'm reading on here about
2 this quasar thing that they unveiled where somebody's sitting
3 there controlling these things and I -- my thinking is are there
4 standards that these people have -- that they have to meet to
5 control this? You know, are there psychological tests, you
6 know, like police officers have to take before they're allowed
7 to join the force? I mean what are the safeguards and the
8 assurances that these things are not going to be happening here
9 and that's what concerns me about it.

10 It's -- you know, it seems to me like our society, we're
11 going -- we're getting to the point where we're trying to mask
12 what war is really about. I'm a veteran myself. I was an
13 infantryman and I did one combat tour to Iraq. And it seems to
14 me with all of this, you know, we're about subtracting our
15 manpower, but we're -- it seems to me we're masking the real
16 pain and horror of war. When it gets to the point where it's --
17 where you can talk easily about war then something's wrong, you
18 know, something's wrong in our society. And, you know, war
19 should -- the pain and horror of war should be known because it
20 should be the last resort of any government and it seems to me
21 that we're getting to the point in our society where every --
22 where things are going to be controlled by computers and it's
23 easier not to put a face to that. You know, and that scares me,
24 the fact that war is becoming easy, almost like a video game,
25 like we're sitting around on Xboxes playing Call of Duty or

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 something. That's what it seems to me like real life is getting
2 to and, you know, there's no reset button in real life. And I'm
3 -- you know, anybody that's worn that uniform knows that.
4 There's no reset button in real life and that's what scares me
5 is that war is becoming a -- it's becoming too easy to consider
6 as a resort and that's -- that tells me, you know, as a species,
7 as humanity we've failed and I really hope and pray that at some
8 point we get it together because that's not a good road to go
9 down in the future. So that's all I got.

10 COLONEL ORR: Thank you. Is there anyone else that would
11 like to make a comment at this time? Anyone else? Okay. Well,
12 on behalf of all current and future service members I would like
13 to thank you again for your participation and input tonight.
14 Alaskan Command welcomes your review and comments on the
15 analysis contained in the Draft EIS. Again, written comments
16 can be submitted by filling out a comment form tonight or
17 mailing it to the address on the comment form. Comments may
18 also be submitted via the website or fax. All comments must be
19 postmarked or received by June 7th, 2012, to be considered in
20 the Final EIS. If you haven't already done so, we encourage you
21 to look at the maps and other displays around the room. These
22 provide details on the individual proposals and we have someone
23 at each station to answer your questions. Also, if you decide
24 that you would like to make a comment myself and the court
25 reporter will be here till 8:00 o'clock to receive them. We

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 appreciate your time and interest in JPARC and welcome your
2 comments and that's why we're here today.

3 Thank you again. Please have a safe trip. This hearing
4 is adjourned.

1 P R O C E E D I N G S

2 (On record at 7:03 p.m.)

3 COLONEL WEISS: Okay. We are on the record at 19:03
4 hours. This hearing is scheduled to end at 9:00 p.m. However,
5 since the crowd is rather small I will certainly allow
6 additional comments. After we get through the initial comments
7 you can expand on your comments. We have plenty of time, so I
8 want everybody to make sure they have their say.

9 If you do not feel comfortable standing up to make a
10 statement you can submit a written comment here tonight using a
11 comment form. You can submit comments until June 7th, 2012.
12 Keep in mind that the written comments are given the same
13 consideration as verbal comments that you offer here tonight.

14 To ensure that we get an accurate record of what you have
15 to say please help me by respecting the following ground rules.
16 First, please speak clearly and slowly into the microphone. Now
17 I will be handing you the microphone. The microphone does not
18 amplify. It merely is so that the court reporter can record
19 your comments for the record verbatim. So we will hear you
20 fine, everything will be picked up, but it will not amplify, so
21 don't be concerned about that. And please when you come up
22 state your name and please spell your name for the record so
23 that we get it correct in the record. And also if you represent
24 an organization please if you would like to also state the
25 organization which you represent. Please do not provide any

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 other personal information, such as your home address or phone
2 number. Your oral comments will be recorded by a court reporter
3 verbatim, that means word for word, used to develop a transcript
4 and permanent record of this meeting and will be published as
5 part of the Final Environmental Impact Statement. The names of
6 the individuals making comments, as well as their comments, will
7 be disclosed in the Final EIS. Personal home addresses and
8 phone numbers will not be published.

9 Second, each person will be allotted four minutes to
10 speak. In order for each individual speaking to have the full
11 time allotted, audience members will be respectful of the
12 opinions offered by your neighbors. If you anticipate your
13 comments will extend beyond the time allotted, please make the
14 most important comments first. And again, after the initial
15 four minutes if you have additional comments we will do an
16 additional four minutes since we certainly will have the time to
17 do so.

18 Third, if you have prepared a written statement you may
19 turn it in at the registration table or you may read it out loud
20 if you can do so within the time period allotted.

21 Please make -- please honor any request that I make for
22 you to stop speaking when you reach the four minute time limit.
23 The timekeeper will hold up a yellow card and you will have 30
24 seconds left to speak to assist you in knowing when your
25 allotted time is almost up so you can comfortably conclude your

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 remarks. When a red card is displayed that means the four
2 minutes are up and in the interest of politeness and fairness to
3 others who wish to speak the speaker will be asked to stop and
4 return to his or her seat, and again unless you ask for an
5 additional four minutes to expand your comments which we will
6 allow at this hearing.

7 We are ready now to begin. The first speaker I have
8 listed here is Mr. Dan McGregor. Please come forward if you'd
9 like. Please go ahead.

10 MR. MCGREGOR: Oh, okay. Dan McGregor, M-C-G-R-E-G-O-R.
11 As we reported, with Denali Air. Primarily focusing concerns on
12 areas basically out the Nenana River Valley and glaciers
13 surrounding the Mount Devera (ph) area. There are right now two
14 main operators that spend a lot of time, but there's more,
15 Atkins Flying Service in different areas, different companies
16 that fly out there with regular routine flights out that area
17 doing landings, being on the glaciers. The concern was low
18 level traffic in that area affecting that commercial status and
19 the ability to make money and of course safety concerns with
20 fast movers and very slow movers, being us, on wheel skis and
21 different things. So I just wanted to mostly go on record that
22 that was brought up in concern.

23 A lot of the areas focus more under the Fox 1 MOA, which
24 is not going to be an issue as long as that surface ceiling goes
25 down to -- or stays above 5,000 AGL. Any change to that in the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Fox 3, that 500 feet. I understand the need for training at
2 that low level and that's of value. It's a drastic change and
3 that's one of the things that concerns us I guess is the severe
4 change in that from 5,000 down to 500. Most of the glaciers
5 that we are flying into are going to be out of that realm, but
6 there are some and there's transit areas where we cross that --
7 through that. It's very difficult without being able to get in
8 contact and alert the MOAs. I think radio repeater -- as I
9 understand it, the radio repeater or the alert systems through
10 the radio traffic is not quite operational yet and the funding
11 is in place, but those aren't at full capacity yet I guess for
12 us to be able to update or get updates on any MOA traffic while
13 we're in the air as far as I understood and I can find out more
14 on that later.

15 But in general I just wanted to have it known that there
16 is commercial traffic out there. We do fly out there regularly
17 and if that is taken into account that would be a good thing to
18 have noted. That's it.

19 COLONEL WEISS: Thank you very much. Mr. Adam White.

20 MR. WHITE: Thank you. Name is Adam White serving as the
21 President of the Alaska Airmen's Association, last name spelled
22 W-H-I-T-E. First of all, I want to thank the military for your
23 efforts in educating the public. I've learned an awful lot
24 about the way our government operates and this whole NEPA
25 process. Appreciate your patience as you have been educating me

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 and a lot of our constituents and members and thank you for your
2 efforts and your time for that.

3 A couple of areas that I wanted to comment on tonight.
4 We, especially here north of the Alaska Range, have really
5 appreciated and enjoyed the safety and the peace of mind of
6 having access to the SUAIS Service, the Special Use Airspace
7 Information Service. That has been a tremendous help in us
8 transiting the area that you guys use for your operations. It
9 has helped de-conflict our passage through that area and from
10 what I hear from your direction back towards us you appreciate
11 having the knowledge where we are and when we're going to
12 transit that area.

13 I would like to encourage you to expand that system, and I
14 know that's been talked about, but especially with the proposal
15 for the Fox MOA expansion and the Paxson MOA. The most coverage
16 we could have down there the better and it would -- from our
17 perspective if the coverage is not there or if a certain
18 repeater may be out of service consider mitigations for not
19 using the lower level, lower strata of that airspace when the
20 communications may not be available for any given time. Because
21 we've had such great success with that service we would like to
22 see it implemented actually nationwide to be honest with you.
23 And we know that there's a couple of other areas in the U.S.
24 where they have similar type systems, but knowing the success
25 that we've had here we especially want it implemented statewide

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 and especially in these lower altitudes where the potential for
2 conflicts exist.

3 One of the things, that as the Airmen's Association we try
4 to make sure that we're up to speed and aware of what's going on
5 not just with this particular procedure and policy change, but
6 with other areas that the military's acting as well as how that
7 interacts with the FAA. And it's not an easy task, but some of
8 the things that we've talked about previously, the moving of the
9 F-16s from Eielson down to JBER and how that might affect some
10 of your proposals and want to make sure that that's at least
11 considered or talked about during some of these areas.

12 Looking at my notes here. As we brought up earlier, with
13 the UAV corridors and the lack of definition from the FAA about
14 your ability to operate these vehicles in the national airspace
15 system, want to make sure that if your proposal for the
16 realistic live ordinance does include connecting R-2211 and R-
17 2202 that you would not be limited to using that airspace for
18 what it was specifically requested for. But since that airspace
19 would potentially be there it would be better to be able to use
20 it for multiple uses, including the UAVs.

21 Question that we also have that -- not sure that it's been
22 dealt with sufficiently is the use of Fort Greely and class
23 delta airspace there with the potential for traffic to possibly
24 decline in that area and the potential for that no longer being
25 a full-time type operations, what would that do for some of the

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 transit areas through that area as far as general aviation and
2 civilian traffic. One of the things that has been brought up
3 numerous times by our members.....

4 COLONEL WEISS: Sir, you've.....

5 MR. WHITE: Okay.

6 COLONEL WEISS:you've taken up four minutes at
7 least.

8 MR. WHITE: Okay.

9 COLONEL WEISS: (Indiscernible).

10 MR. WHITE: Sorry about that. One of the things that's
11 been brought up by our members is the narrow slot that would be
12 available to transit up the Richardson Highway and the
13 possibility of possibly shaving some of the eastern boundary of
14 2202 if the restricted area is approved over the battle area
15 complex to give us a little more breathing room to transit that
16 area and de-conflict with opposite traffic. That is a heavily
17 traveled area, especially in low weather, because we tend to
18 follow low terrain and we need as much room as we can. Also
19 understanding that if it's bad weather chances of you having
20 live weapons release from an aerial platform in the battle area
21 complex is probably pretty limited.

22 But here again, we're dealing with an education issue of
23 our constituents. They see an area on a map. Unfortunately
24 they don't always research it to the point to realize that it's
25 only activated during certain times and that's an education

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 issue that we constantly struggle and deal with and ask for your
2 patience on especially.

3 And I guess that concludes my oral statements and
4 encourage you to look for a written statement before the
5 deadline of June 7th. So thank you.

6 COLONEL WEISS: Thank you. Sir, would you like to expand
7 on your comments? Certainly can if you'd like.

8 MR. MCGREGOR: No, (indiscernible) terminology.

9 COLONEL WEISS: All right. Thank you. I would like to
10 thank you again for your participation and input tonight.
11 Alaskan Command welcomes your review and comments on the
12 analysis contained in the Draft EIS. Again, written comments
13 can be submitted by filling out a comment form tonight or
14 mailing it to the address on the comment form. Comments may
15 also be submitted via the website or fax. All comments must be
16 postmarked or received by June 7th, 2012, to be considered in
17 the Final EIS. I know you've already looked at the maps and
18 charts in the back, but please feel free to view them again and
19 ask additional questions if you'd like as we certainly have the
20 time available. We appreciate your time and interest in JPARC
21 and welcome your comments. That is why we're here today and I
22 thank you. The meeting is adjourned.

23 THE REPORTER: Off record, 7:15 p.m.

24 (Off record at 7:15 p.m.)

25 (On record at 8:35 p.m.)

10

1 COLONEL WEISS: We're back on the record. It is now 21:35
2 hours and we have an additional speaker.

3 UNIDENTIFIED MALE: Will you please just state your name
4 for the record?

5 MR. GRAHAM: Yeah, it's Robert Graham, G-R-A-H-A-M, and
6 I'm a missionary pilot up here in Alaska. I fly to and from the
7 villages taking supplies, clothes, diapers, so on and so forth
8 in. I've brought 400 missionaries up since 2008 and I just want
9 to make sure that aviation traffic to the general public
10 wouldn't be shut down and restrict when and where we fly already
11 -- more than what it already is. That's pretty much all I have
12 to say.

13 COLONEL WEISS: Okay.

14 MR. GRAHAM: Sorry. Yeah, I.....

15 COLONEL WEISS: Thank you very much. And let me correct
16 the time on that. It's, what, 20:35 hours if I stated that
17 incorrectly. So we're off the record now.

1 P R O C E E D I N G S

2 (On record at 7:03 p.m.)

3 COLONEL WEISS:get started please.

4 COLONEL WARING: Ladies and gentlemen, we're about to
5 start taking public testimony, so if you could please take your
6 seats. If you do still have additional questions so that we
7 don't have background noise for the recorder if you could maybe
8 take them outside or have the discussions outside or wait until
9 after we've completed the comments that we'll be receiving.
10 Probably we'll have plenty of time to be able to
11 (indiscernible).

12 UNIDENTIFIED MALE: We are on the record at 19:03 hours.

13 COLONEL WEISS: Welcome, ladies and gentlemen, and please
14 feel free to continue writing your written comments if you so
15 desire. We have two individuals that have submitted speaker
16 cards. If you change your mind during the course of the public
17 comment period here and would like to address the group and make
18 a public comment please feel free to do so. We'll -- we are
19 here till 9:00 o'clock tonight, so if you decide you want to
20 make a public comment please get a card and -- get up and get a
21 card and feel free to do so.

22 A few ground rules. We're -- the hearing is scheduled to
23 go until 9:00 o'clock tonight. And I would just ask that,
24 again, if you feel uncomfortable or would rather not make a oral
25 public comment you're certainly welcome, again, to submit

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 written comments here tonight using the comment form or you can
2 also submit comments until June 7th, 2012 -- in which to submit
3 written comments. Keep in mind that written comments are given
4 the same consideration as verbal comments offered here tonight.

5 To ensure that we get an accurate record of what you have
6 to say please help me by following the following rules if you
7 don't mind. First of all, because this is being recorded
8 verbatim we want to make sure that you speak slowly and clearly
9 into the microphone. Now the microphone does not amplify. It
10 is merely a recording device. So I don't think we'll have any
11 problem having everybody heard in the room here, but don't worry
12 that it's not amplifying because it's not intended to. Also,
13 when you come up to make your comment if you could please state
14 your name and then please spell your last name for the record as
15 well. And if you happen to be representing an organization or
16 an association and you'd like to indicate on the record that you
17 are representing them please do so and name the organization.
18 Please do not provide any other personal information, such as
19 your home address or phone number. Your oral comments will be
20 recorded by a court reporter verbatim, used to develop a
21 transcript and permanent record of this meeting and will be
22 published as part of the Final Environmental Impact Statement.
23 The names of the individuals making comments, as well as their
24 comments, will be disclosed in the Final EIS. Personal home
25 addresses and phone numbers will not be published.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 Now we're going to start out -- and again, since we only
2 have two comments we won't, you know, stick strictly to this,
3 but we'll just start out with each individual will be given four
4 minutes in which to make their comments. And we will have a
5 signal with 30 seconds remaining of your four minutes so you can
6 wind up and then after the four minutes you'll receive a stop
7 sign. If you would like to expand on your comments, if that
8 wasn't enough time, as now time should not be a problem you're
9 certainly welcome and we'll give an additional four minutes so
10 you can complete your comments. And again, if anybody else has
11 not signed up please do so if you want to make a comment or if
12 something somebody says prompts you to make -- want to make a
13 comment please do so.

14 Oh, and if you've prepared a written statement you may
15 turn it in at the registration table and you may read it out
16 loud if you would like as part of the oral comments and turn it
17 in as a written matter, however you'd like to do it.

18 And I think that covers all our preliminaries and if we
19 could begin the -- with the first speaker, Brian Okonek.

20 MR. OKONEK: My name is Brian Okonek, last name is spelled
21 O-K-O-N-E-K. Thank you for this opportunity to comment. I'm
22 most familiar with the Fox 3 MOA area. I understand the
23 military's need for practice areas, but also feel that the
24 military practice areas or the practicing that's being done on
25 these areas has a huge impact to other users on the ground.

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 There's -- it's very, very hard, even as big as Alaska is,
2 to find areas where there's truly natural soundscape and it's
3 becoming ever more difficult. I used to run a guiding business
4 and we would take people on wilderness backpacking trips and
5 their stereotype image of the wilderness was a place for the
6 most part devoid of human and mechanical noise.

7 We had a business for quite a few years going to an area
8 that we took very small groups. We didn't visit it very often.
9 But as aircraft traffic continued to increase in this state we
10 started getting comments from our visitors that they were
11 surprised by the amount of aircraft noise and finally it got to
12 the point that we got enough negative comments about aircraft
13 noise that we had to quit using certain areas that we had
14 traditionally used because of over flights. It just didn't --
15 it didn't go with their vision of what wilderness is. Quality
16 wilderness really needs quality soundscape.

17 I was very disappointed to see that there were only two
18 real alternatives left for the Fox 3 area, that alternative A and
19 alternative E, and they both had flights -- minimum flight
20 altitudes that went down to 500 feet. That's really low and
21 it's really low when you have fast moving aircraft and aircraft
22 coming like over a ridge top when you're in a valley. It's just
23 amazing the impact it has on the ground. High flying aircraft
24 you slowly hear it coming and the noise gradually gets louder
25 and then as it goes over it's the loudest and then it dissipates

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 as it flies away, but when you're in a valley and you suddenly
2 have an aircraft, even a 185, pop over a ridge it's a real shock
3 to the whole valley. You don't hear it coming and all of a
4 sudden you've got this full impact of the noise and it really
5 changes an experience when you're on the ground, have this type
6 of activity.

7 I'd really encourage you to go back and reevaluate that
8 minimum altitude. This Fox 3 area is a very popular area for
9 people on the ground, people backpacking, people fishing, people
10 rafting, people hunting. There's a lot of use. Just look on
11 the map of where it's at. It's close to Anchorage, it's close
12 to lots of urban areas. It's between all the highway systems in
13 the state. It's one of the easier places to access and actually
14 get a wilderness experience from a road. But as you go into it
15 you end up getting more and more air traffic.

16 The natural soundscape matters for the animals too.
17 There's -- it's very hard finding definitive sound studies and
18 how they affect animals and birds. I -- I'm on a -- a member of
19 a over flights committee for Denali National Park and we've had
20 access to a long, long list of sound studies and many, many,
21 many are inconclusive and hard to substantiate just the impacts,
22 but some of them do indicate that there's -- puts animals at a
23 high stress level, especially during calving and lambing
24 periods. The Nelchina caribou herd is in this Fox 3 area. One
25 of its main calving areas is right in the middle of your MOA,

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 your MOA, and there's also a lot of sheep in the Talkeetna
2 mountains and in the Alaska Range and their lambs are very
3 sensitive to disturbance by noise. I encourage you to work
4 very, very closely with the Alaska Department of Fish and Game
5 to find out just where these areas are and consult with them
6 each year to find out where the caribou are calving to try to
7 create a bubble over those areas to protect them. It's quite a
8 long period. It's not just the day they drop their calves
9 that's the critical period. It's the first couple months of
10 their life. They're very small young calves trying to stay with
11 the cows and major noise disturbance can separate them and
12 create problems.

13 And like I -- my question I had about the mitigating, many
14 of your mitigating factors are very much educational. I'll just
15 continue just a few minutes here and wrap it up. And I -- and
16 you did explain that there are other ongoing mitigating factors
17 going on, but I think you need to really concentrate on some
18 mitigating factors that will protect critical areas within these
19 -- all these MOAs. Thank you very much.

20 COLONEL WEISS: Mr. Schapansky.

21 MR. SCHAPANSKY: Thank you. My name is Elwood Schapansky,
22 S-C-H-A-P-A-N-S-K-Y. I'm a retired local glacier pilot so my
23 point of view will be that of a pilot rather than of a person
24 interested in wildlife. I'm also interested in wildlife. We
25 make many trips to see that from the air and do our best not to

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 disturb anything.

2 My main concern tonight is that this is like a planning
3 stage and that our words won't be heard by the FAA. The FAA
4 should be here ultimately and so that's my first comment. I
5 would like to be able to say these words to people that will
6 hear me rather than people that are putting them down on a piece
7 of paper and hoping that the FAA will see them.

8 I have flown all over Alaska during the last 40 years.
9 I've been in the Naknek (ph) MOA, I've been in the MOAs to the
10 west of the Alaska Range, I've been up all along the Tanana
11 Valley. I've only had one negative experience in a MOA. A MOA
12 for a pilot is a place where we can fly, but we have to look out
13 and I've been very, very close to a couple of F-15s in the
14 Galena area. That's the only bad experience I've had in 10
15 years flying the Susitna MOA, not a problem. So I'm not
16 concerned about those areas, I am concerned about the Fox 3 area
17 and I am concerned about expanding that. I would like very,
18 very much to have the Fox 3 area to be like the Buffalo area
19 where there are altitude restrictions. The Buffalo MOA has a
20 impact below 1,500 feet AGL. I'd like to see that moved up to
21 3,000 feet as a minimum. Just north of that there's another MOA
22 that does have the 3,000 foot restriction. I'd like to see that
23 throughout the entire Fox area and I definitely would not like
24 to see that expanded.

25 I would certainly favor the expansion of the restricted

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 airspace that is used for live targeting in the Fairbanks area.
2 I don't think those people will necessarily appreciate that, but
3 it is a necessary thing for the military to do and I would be in
4 favor of that. We're already used to restricted airspace. It's
5 very well defined, how we deal with it is well defined. The
6 worst thing for me as a pilot is that the restrictions on
7 altitude. The altitude flight rules start at 3,000 feet AGL,
8 that is above ground level. These high speed military aircraft
9 can penetrate that airspace and it's my responsibility to be
10 aware of them. I don't have T Cass (ph), I don't have the
11 ability of seeing them by using my transponder. I don't have
12 the electronics to do that. So it's see and be seen and I am
13 not in favor at all of military aircraft impinging upon the
14 airspace that I'm already used to as an FAA pilot. So 3,000
15 feet AGL puts me or puts the MOAs in the same restricted region
16 or in the same set of rules as the FAA already has and we don't
17 have to worry. We have to look out for other small aircraft,
18 but we don't have to worry about a high speed jet impinging upon
19 that area.

20 So if there's any changes going to be made in these
21 expansions certainly make them so that the FAA rules for, you
22 know, picking your flight altitude above the ground is
23 consistent with the altitudes used in the MOAs. Thank you.

24 COLONEL WEISS: Thank you. Would anybody else like to
25 speak at this time or expand their comments? Apparently not. I

10

1 will just say that we will be here till 9:00 o'clock. If you
2 would like to make a comment during that time we'll reopen the
3 record and you can make a comment then.

4 So for now, on behalf of the -- of all our service men and
5 women I would like to thank you again for your participation and
6 input tonight. Alaskan Command welcomes your review and
7 comments on the analysis contained in the Draft EIS. Again,
8 written comments can be submitted by filling out a comment form
9 tonight or mailing it to the address on the comment form.
10 Comments may also be submitted via the website or by fax. All
11 comments must be postmarked or received by June 7th, 2012, to be
12 considered in the Final EIS.

13 So we have no further comments at this time. The hearing
14 is adjourned. Thank you for coming.

15 UNIDENTIFIED MALE: We appreciate our (indiscernible).

16 COLONEL WEISS: Thank you. We are off the record.

2 (On record at 6:57 p.m.)

3 THE REPORTER: On the record, 6:57 p.m. Here you go.

4 COLONEL WARING: Ladies and gentlemen, (indiscernible)
5 public comment. (Indiscernible) conversation in the hallway
6 (indiscernible) or please keep the noise level down so we can
7 proceed with public comments (indiscernible).

8 COLONEL WEISS: Thank you, ladies and gentlemen. This
9 hearing is scheduled to end at 9:00 p.m. If everyone who wishes
10 to do so has spoken and you would like an opportunity to expand
11 on your remarks you may have the chance to do so, if time
12 permits. If you do not feel comfortable standing up and making
13 a statement or, if you would prefer, you can submit a written
14 comment here tonight using a comment form. You can also submit
15 comments until June 7th, 2012. Keep in mind that written
16 comments are given the same consideration as verbal comments
17 offered here tonight.

18 To ensure that we get an accurate record of what you have
19 to say please help me by respecting the following ground rules.
20 First, please speak clearly and slowly into the microphone. And
21 I would note that the microphone does not amplify, it merely is
22 a recording device for our court reporter. And please state
23 your name and if you could also please spell your last name.
24 And also if you represent an organization to please state the
25 organization to which you represent. Please do not provide any

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 other personal information, such as your home address or phone
2 number. Your oral comments will be recorded by a court reporter
3 verbatim, used to develop a transcript and permanent record of
4 this meeting and will be published as part of the Final EIS.
5 The names of individuals making comments, as well as their
6 comments, will be disclosed in the Final EIS. Personal home
7 addresses and phone numbers will not be published.

8 Second, each person will be allotted four minutes to
9 speak. If you anticipate your comments will extend beyond that
10 time, please make the most important comments first.

11 Third, if you've prepared a written statement you may turn
12 it in at the registration table or you may read it aloud if you
13 can do so within the four minute time period.

14 Fourth, please honor any request that I make for you to
15 stop speaking when you reach the four minute time limit. The
16 timekeeper will hold up a yellow card which means you have 30
17 seconds left to speak. And this is to assist you in knowing
18 when your allotted time is almost up. When a red card is
19 displayed that means the four minutes are up and in the interest
20 of politeness and fairness to others the speaker is requested to
21 return to their seat.

22 We are now ready to begin and our first speaker is Mr.
23 Bill Frey. Mr. Frey.

24 MR. FREY: Thank you. Just want to say thanks for all of
25 the work you guys have done presenting this. It's been very

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

1 informative. My concern was the hunting, fishing, traveling
2 with families and stuff out there. You seem to have addressed
3 that fairly well. I hope everything goes as it seems and hope
4 to see you all out there having a good time.

5 COLONEL WEISS: Thanks.

6 UNIDENTIFIED MALE: Thank you, sir.

7 COLONEL WEISS: Mr. Orville Gilman, III.

8 MR. GILMAN: My name's Orville Gilman. I live in Wasilla.
9 And I read this document previously on the internet some, it's
10 large, and coming here tonight I appreciate the fact now that
11 it's actually an Environmental Impact Statement and I have the
12 same concerns as other people. I don't want to get locked out
13 of areas we've hunted in for years. I think that as a whole the
14 military needs these training operations, but I also feel that
15 as opposed to locking them out -- I mean personally I think that
16 it'd be safer -- in the issue of live range fires certainly you
17 don't want anybody in there. In other instances I think working
18 among the citizen population say during the hunting season would
19 be more of an opportunity than a hindrance because in
20 Afghanistan and Iraq right now we're definitely working right
21 through civilians. It just makes sense that for good real world
22 training that there's really no need to remove the public from
23 everywhere.

24 And as far as the environmental impact goes, I -- in all
25 the years I've lived here since '68, since I was seven years

KRON ASSOCIATES
1113 W. Fireweed Lane, Suite 200
Anchorage, Alaska 99503
(907) 276-3554

5

1 old, and I -- I've never really seen that the military's impact
2 on wildlife game populations was any more or less than any other
3 person or group traveling through the country. So I don't hold
4 that as something that I fear as a problem.

5 I just am more concerned with it seems like every time we
6 have an impact statement, an agreement for something to happen
7 in a certain specific way, a few years later it tends to be that
8 the federal agency or the state agency starts to take total
9 control and it doesn't turn out to be the thing that it started
10 out as. And that's what I'd like to see avoided here, I'd like
11 to see it -- that the military can train, they can operate in
12 the state and that we can all still hunt and fish and enjoy our
13 rights as citizens. Because the bottom line is this is America
14 and each and every one of us is an American and this is our
15 government, not a government above us, but a government of us.
16 It's our decision and I think we can make a reasonable and wise
17 decision. Thank you.

18 COLONEL WEISS: Thank you, sir. Is there anyone else that
19 would like to make a public comment? Would either of our
20 speakers like to expand on their comments at this time?

21 All right. Thank you very much. On behalf of the men and
22 women of the United States military I would like to thank you
23 all again for your participation and input in tonight's program.
24 Alaskan Command welcomes your review and comments of the
25 analysis contained in the Draft EIS. Again, written comments

KRON ASSOCIATES

M.4.6 Summaries of Meetings with Community Leaders

M.4.6.1 City of Anchorage: May 11, 2012

During the afternoon prior to the Anchorage public hearing, the JPARC team (Colonel Waring, LTC Hunt, LTC Cabral, Capt. Bryan, Joan Smart, and Lou Maslyk) met with George Vatalis, Anchorage City Manager, to brief him on the public hearing. He thanked the team for setting up the hearings.

Key meeting points:

- Discussed potential for impacts to Merrill Field and status of Class D airspace.
- The military discussed that potential hunting season restrictions would be included in the mitigations and would be the same as the 1997 *Alaska MOA EIS* Record of Decision (ROD) or new ones may be added, as applicable.

M.4.6.2 Matanuska-Susitna Borough, Aviation Advisory Board, and Fish and Wildlife Commission: May 14, 2012

The JPARC team (Colonel Waring, LTC Hunt, LTC Cabral, Capt. Bryan, Joan Smart, and Lou Maslyk) met with members of the Matnuska-Susitna Assembly to brief them on the public hearing. The briefing format was a short question and answer session.

Key meeting points:

- Questions focused primarily on the proposed Fox 3 Expansion and Paxon MOA proposal, safety of civil aviators, effects on wildlife, and impacts to recreational activities.
- It was requested that the military take public input on wildlife seriously, given its importance to hunters, guides, and those using it for subsistence.
- It was noted that sonic booms would be very disruptive to wildlife when fighters are flying at 500' AGL proposed for the Fox 3 Expansion and Paxon MOA Addition, especially during moose and caribou calving and hunting seasons.
- The military discussed that potential hunting season restrictions would be included in the mitigations and would be the same as the 1997 AK MOA ROD or new ones may be added, as applicable.

M.4.6.3 Delta Junction: May 18, 2012

The JPARC team (Colonel Waring, LTC Hunt, LTC Cabral, Capt. Bryan, Joan Smart, and Lou Maslyk) met with George Hallgren and Mike Tvenge, city administrators for the City of Delta Junction to brief them on the public hearing.

Key meeting points:

- City concerns centered around the 2006 MOA between the City and USARAK. Specifically, the conditions from the MOA that need to be met to mitigate fire danger, incendiaries, noise, flooding, and general safety, need to be included in the JPARC Draft EIS.
- The City is concerned about a significant increase of Army training activities and weaponry with the addition of the proposed restricted area.
- Because of this, they feel the Draft EIS should be revised with significant input from Delta Junction.

M.4.6.4 Healy: May 21, 2012

The JPARC team (Colonel Waring, LTC Hunt, LTC Cabral, Capt. Bryan, Joan Smart, and Lou Maslyk) met with Denali Borough Mayor Talerico on to brief him on the public hearing.

Key meeting points:

- The Mayor mentioned he has not received much feedback from his constituents with regard to JPARC.
- His primary concern is the potential access limitations as part of the Realistic Live Ordnance Delivery proposal.
- He asked what the resolution would be and about the days and times access would be restricted.
- He noted the Bonnefield Trail as an important recreational asset that could be adversely affected by such access limitations.

M.5 DRAFT EIS REVIEW PERIOD CONTINUATION NOTICES

M.5.1 Extension Request Letters and Letters from General Hoog Extending the Comment Period

HEADQUARTERS
ALASKAN COMMAND (ALCOM)
JOINT BASE ELMENDORF-RICHARDSON, ALASKA 99506

May 29, 2012

Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBER, AK 99506

The Honorable Luke Hopkins, Mayor, Fairbanks North Star Borough
The Honorable Dan Sullivan, Mayor, Municipality of Anchorage
The Honorable Jerry Cleworth, Mayor, City of Fairbanks
The Honorable Doug Isaacson, Mayor, City of North Pole

Dear Mayors

Thank you for your letter dated April 24, 2012, requesting a 60-day extension of the public comment period for the Joint Pacific Alaska Range Complex (JPARC) Draft Environmental Impact Statement (EIS).

In response to your specific concerns, the force structure proposal to move F-16s from Eielson Air Force Base and the JPARC Modernization and Enhancement Draft EIS are unrelated. The 12 individual proposals in the JPARC Draft EIS are designed to improve specific training capability shortfalls for both Army and Air Force proponents, none of which were dependent upon F-16 basing strategies. Any environmental impacts associated with aircraft basing will be addressed through a separate process.

However, as we move along through this critical EIS process, I have decided to extend the public comment period through Monday, July 9, 2012, 32 days beyond our original date of June 7, 2012, providing a total of 102 days for public comment on the 12 proposed actions. This extension allows residents an additional opportunity to thoroughly review this complex JPARC Draft EIS and provide substantive comments for preparation of a comprehensive final EIS.

As always, my team and I are ready to address any other concerns you may have. We value your inputs.

Sincerely

STEPHEN L. HOOG
Lieutenant General, USAF
Commander

M.5.2 ALCOM Press Release

Alaskan Command **NEWS RELEASE**

Alaskan Command Office of Public Affairs
9480 Pease Ave, Ste 120, JBER, AK 99506-2100
Cmcl (907) 552-2341 DSN (317) 552-2341 Fax: Cmcl (907) 552-5411 DSN (317) 552-5411

FOR IMMEDIATE RELEASE

Release 006
May 31, 2012

Military will continue to accept JPARC Draft Environmental Impact Statement (EIS) comments through July 9

JOINT BASE ELMENDORF-RICHARDSON, Alaska – The U.S. Army and U.S. Air Force, on behalf of Alaskan Command (ALCOM), will continue to accept comments on proposed changes to the Joint Pacific Alaska Range Complex through **July 9, 2012**.

Comments received no later than July 9, 2012, will be considered in the preparation of the final Environmental Impact Statement (EIS). Comments may be submitted via the website, www.jparceis.com, mail, or fax.

Make your comments count! Explain how proposed actions may affect you. Give examples. Tell what you do support as well as what you don't. Offer solutions—draw on your expertise as an interested stakeholder to suggest innovative ideas. Those substantive comments received by July 9, 2012, will be included in the Final EIS.

ALCOM, as the Department of Defense's regional joint headquarters in Alaska, has coordinated with the Services to develop a joint strategy to identify joint training opportunities in Alaska, maximize the use of training resources, and improve joint training. The *Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska (JPARC Modernization and Enhancement EIS)* will evaluate the elements of this strategy which are reasonably foreseeable.

At present, the JPARC consists of all land, air, and sea training areas used by the Army, Navy, and Air Force in Alaska. The military uses the JPARC to conduct testing, unit level training, and to support various joint exercises and mission rehearsals. The JPARC was originally developed to support cold war weapons, tactics, and techniques. Its current configuration cannot fully meet the training requirement for forces and exercises located in Alaska. The proposed JPARC enhancements would enable realistic joint training and testing to support emerging technologies, respond to recent battlefield experiences, and train with tactics and new weapon systems to meet combat and national security needs. JPARC enhancements would enable the Services to train realistically and jointly so military personnel could succeed in their mutually supportive combat roles when exposed to situations faced in actual combat.

The EIS will analyze the environmental effects of the proposed changes and their alternatives. Federal, state, and local agencies, Alaska Native, and interested groups and persons are encouraged to provide comments on the proposed action by mail or fax at the address and numbers provided below. More information can be found at the project website at www.jparceis.com.

ALCOM Public Affairs

Fax: 907-552-5411

M.5.3 Federal Register Notice of Continuation

33202

Federal Register / Vol. 77, No. 108 / Tuesday, June 5, 2012 / Notices

2012 be closed to the public because it will concern matters listed in section 552b(c)(1) of title 5, United States Code. Specifically, the information presented meets criteria established by an Executive Order to be kept secret in the interest of national defense and foreign policy.

On the afternoon of June 25, 2012, the DHB will receive briefings on military health needs and priorities. The Board will vote on three potential recommended changes to the Tactical Combat Casualty Care Guidelines and one proposed recommendation on Research, Development, Test and Evaluation Priorities for Battlefield Trauma Care from the Trauma and Injury Subcommittee. Additionally, the Board will receive information briefs from the National Trauma Institute and U.S. Army Institute of Surgical Research.

Pursuant to 5 U.S.C. 552b, as amended, and 41 CFR 102–3.140 through 102–3.165 and subject availability of space, the DHB meeting is open to the public from 1:00 p.m. to 5:15 p.m. on June 25, 2012.

Written Statements

Any member of the public wishing to provide comments to the DHB may do so in accordance with 41 CFR 102–3.140(c) and section 10(a)(3) of the Federal Advisory Committee Act, and the procedures described in this notice.

Individuals desiring to provide comments to the DHB may do so by submitting a written statement to the DHB Designated Federal Officer (DFO) (see FOR FURTHER INFORMATION CONTACT). Written statement should address the following details: the issue, discussion, and a recommended course of action. Supporting documentation may also be included, as needed, to establish the appropriate historical context and to provide any necessary background information.

If the written statement is not received at least 10 calendar days prior to the meeting, the DFO may choose to postpone consideration of the statement until the next open meeting.

The DFO will review all timely submissions with the DHB President and ensure they are provided to members of the DHB before the meeting that is subject to this notice. After reviewing the written comments, the DHB President, and the DFO may choose to invite the submitter to orally present their issue during an open portion of this meeting or at a future meeting. The DFO, in consultation with the DHB President, may allot time for members of the public to present their

issues for review and discussion by the DHB.

Special Accommodations

If special accommodations are required to attend (sign language, wheelchair accessibility) please contact Ms. Lisa Jarrett at (703) 681–6670 by Friday, June 15, 2012.

Dated: May 31, 2012.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2012–13520 Filed 6–4–12; 6:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Air Force

Notice To Extend Public Comment Period for United States Air Force Modernizations and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska Environmental Impact Statement

AGENCY: The United States Air Force, DoD.

ACTION: Notification of extension of public comment period.

SUMMARY: Alaskan Command (ALCOM), on behalf of the U.S. Air Force and U.S. Army is issuing this notice to advise the public of an extension to the public comment period. The initial Notice of Availability published in the *Federal Register* on March 30, 2012 (Vol. 77, No. 62/Notices/19282), requested public comments no later than June 7, 2012. ALCOM has extended the deadline for submitting public comments to July 9, 2012. All substantive comments on the Draft EIS received during the public comment period will be considered in the preparation of the Final EIS.

FOR FURTHER INFORMATION CONTACT: Please direct any written comments or requests for information to Capt Tania Bryan, ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506, ph: 907–552–0876.

Henry Williams Jr.,

Acting Air Force Federal Register Liaison Officer.

DEPARTMENT OF DEFENSE

Department of the Air Force

Corrected Intent To Grant a Partially Exclusive Patent License

AGENCY: The United States Air Force, DoD.

SUMMARY: This notice replaces the one published on May 18, 2012 in the *Federal Register* under Vol. 77 No. 97 Intent to Grant a Partially Exclusive Patent License. Pursuant to the provisions of Part 404 of Title 37, Code of Federal Regulations, which implements Public Law 96–517, as amended, the Department of the Air Force announces its intention to grant SCADA Security Innovation, Inc., a Delaware corporation, having a place of business at 187 Ballardvale Street, Suite A195, Wilmington, Massachusetts 01887, a partially exclusive license, the exclusive portion limited to the field of cyber security for industrial control systems, in any right, title and interest the Air Force has in U.S. Patent Application No. 13/190,520, filed July 26, 2011, titled “Using Software-based Decision Procedures to Control Instruction-level Execution” by William B. Kimball.

FOR FURTHER INFORMATION CONTACT: The Air Force intends to grant a license for the patent application and resulting patents unless a written objection is received within fifteen (15) days from the date of publication of this Notice. Written objection should be sent to: Air Force Materiel Command Law Office, AFMCLO/JAZ, 2240 B Street, Rm. D–14, Wright-Patterson AFB, OH 45433–7109; Facsimile: (937) 255–3733.

Henry Williams Jr.,
Acting Air Force Federal Register Liaison Officer.

Department of the Navy

Meeting of the U.S. Naval Academy Board of Visitors; Correction

AGENCY: Department of Navy, DoD.

ACTION: Notice; correction.

SUMMARY: The Department of the Navy published a document in the *Federal Register* (77 FR 103) on May 29, 2012, concerning the partially closed meeting of the U.S. Naval Academy Board of Visitors. The document failed to publish before the 15-day statutory requirement.

FOR IMMEDIATE RELEASE

Release 006
May 31, 2012

Military will continue to accept JPARC scoping comments through July 9

JOINT BASE ELMENDORF-RICHARDSON, Alaska - The U.S. Army and U.S. Air Force, on behalf of Alaskan Command (ALCOM), will continue to accept comments on proposed changes to the Joint Pacific Alaska Range Complex through July 9, 2012.

Comments received no later than July 9, 2012, will be considered in the preparation of the final Environmental Impact Statement (EIS). Comments may be submitted via the website, www.jparceis.com, mail, or fax.

Make your comments count! Explain how proposed actions may affect you. Give examples. Tell what you do support as well as what you don't. Offer solutions-draw on your expertise as an interested stakeholder to suggest innovative ideas. Those substantive comments received by July 9, 2012, will be included in the Final EIS.

ALCOM, as the Department of Defense's regional joint headquarters in Alaska, has coordinated with the Services to develop a joint strategy to identify joint training opportunities in Alaska, maximize the use of training resources, and improve joint training. The Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska (JPARC Modernization and Enhancement EIS) will evaluate the elements of this strategy which are reasonably foreseeable.

At present, the JPARC consists of all land, air, and sea training areas used by the Army, Navy, and Air Force in Alaska. The military uses the JPARC to conduct testing, unit level training, and to support various joint exercises and mission rehearsals. The JPARC was originally developed to support cold war weapons, tactics, and techniques. Its current configuration cannot fully meet the training requirement for forces and exercises located in Alaska. The proposed JPARC enhancements would enable realistic joint training and testing to support emerging technologies, respond to recent battlefield experiences, and train with tactics and new weapon systems to meet combat and national security needs. JPARC enhancements would enable the Services to train realistically and jointly so military personnel could succeed in their mutually supportive combat roles when exposed to situations faced in actual combat.

The EIS will analyze the environmental effects of the proposed changes and their alternatives. Federal, state, and local agencies, Alaska Native, and interested groups and persons are encouraged to provide comments on the proposed action by mail or fax at the address and numbers provided below.

More information can be found at the project website at www.jparceis.com .

JPARC

Joint Pacific Alaska Range Complex

Modernization and Enhancement Environmental Impact Statement

COMMENTS ACCEPTED THROUGH July 9, 2012

The U.S. Army and U.S. Air Force, on behalf of Alaskan Command (ALCOM), will continue to accept comments on proposed changes to the Joint Pacific Alaska Range Complex (JPARC) through July 9, 2012. ALCOM will accept comments for an additional six weeks beyond the original timeline.

The Air Force and Army held public hearing meetings May 11 through 23 in Anchorage, Glennallen, Delta Junction, Fairbanks, Healy, Talkeetna, and Wasilla. The purpose of these meetings was to obtain public input regarding the modernizations and enhancements proposed to the current military ground and air training assets in Alaska. Written comments received no later than July 9, 2012, will be considered in the preparation of the Final Environmental Impact Statement (EIS).

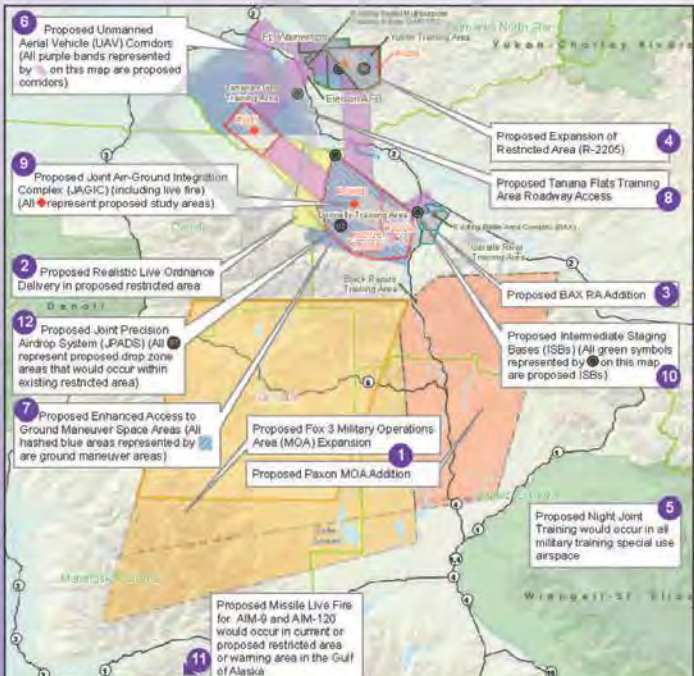

At present, the Joint Pacific Alaska Range Complex (JPARC) consists of all land, air, and sea training areas used by the Army, Air Force, Navy and Marine Corps in Alaska. The military currently uses the JPARC to conduct testing, training, and to support joint exercises and mission rehearsals. The Army and Air Force, through Alaskan Command, are proposing to modernize and enhance the JPARC to enable realistic joint training.

Pursuant to the National Environmental Policy Act (NEPA), the Army and Air Force have prepared the Draft Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska (JPARC Modernization and Enhancement EIS). The EIS analyzes potential environmental consequences associated with the JPARC enhancements. Descriptions of the EIS proposed actions and alternatives analyzed in the Draft EIS are shown below.

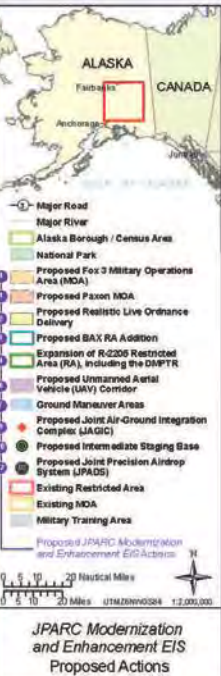

A copy of the Draft EIS is available to download from www.jpargcis.com. You may also view a paper copy at the following locations: Anchorage Z. J. Loussac; UAA Alaska Resources Library and Information Services; Fairbanks North Star Borough (Noel Wien); Fairbanks Elmer E. Rasmuson Library; Palmer Public Library; Copper Valley Community Library; Alaska Department of Fish and Game in Glennallen; Paxson Lodge; Delta Junction Community Library; Tri-Valley School/Community Library; Talkeetna Public Library; Willow Public Library, and Wasilla Public Library.

The EIS Timeline

- Opportunities for Public Involvement
- Where We Are Now
- Notice of Intent to Prepare JPARC Modernization and Enhancement EIS Published in Federal Register December 10, 2010
- JPARC Scoping Period December 10, 2010 - March 4, 2011
- Preparation of Draft JPARC Modernization and Enhancement EIS 2010-2012
- JPARC Modernization and Enhancement EIS Public Comments Period March 30 - July 9, 2012
- Preparation of Final JPARC Modernization and Enhancement EIS 2012-2013
- Notice of Availability of Final JPARC Modernization and Enhancement EIS 2013
- 30-Day JPARC Modernization and Enhancement EIS Waiting Period 2013
- Record of Decision 2013

The proposed JPARC would create improved training and testing opportunities through modernization and enhancement of Alaska's current training areas and capabilities.

APPENDIX N DRAFT EIS COMMENTS AND RESPONSES

N.1 PUBLIC AND AGENCY COMMENT SUMMARY

This section contains comments received from Alaska Native Tribes, Federal, State, and local agencies, and the public, during the public comment period for the draft Environmental Impact Statement (EIS). In accordance with the National Environmental Policy Act (NEPA), Alaskan Command (ALCOM) reviewed public and agency comments and incorporated new information, as appropriate, into the final EIS. ALCOM encouraged public comments in direct mailings to the project mailing list, newspaper advertisements, press releases, and flyers, as well as during public hearings held in the month of May 2012.

During the draft EIS review period that extended from March 30 to July 9, 2012, ALCOM received a total of 266 comment submittals. [Table N-1](#) displays the source of the comment submittals and [Table N-2](#) displays the approximate numbers for the formats in which the comments were received. These numbers are approximate as duplicate comments may have been submitted via multiple methods (i.e., mail, email, fax, website). These duplicate comments may have been consolidated, if the commenter was the same, so only one form of delivery was counted.

Total Public Comments Received (original submittals)	266

ALCOM took public and agency comments into consideration in its decisionmaking process regarding preferred alternatives and mitigations and will continue to do so throughout the environmental impact analysis process. These decisions will be announced in the Record of Decision following the publication of the final EIS. To evaluate the comments, ALCOM subdivided the 266 comment submittals into 1,361 independent comments, categorized by

resource area. [Table N-3](#) identifies the resource areas and breaks out the number of individual comments by resource area.

The majority of the comments focused on proposed mitigations for airspace management and landuse. Specifically, the actions and topics of greatest concern include the proposed Fox 3 and Paxon Military Operations Areas (MOAs); the proposed lowering of the Special Use Airspace (SUA) to 500 feet above ground level (AGL); and related impacts on civil aviation, residents, recreation, hunting, wildlife, subsistence activities, the tourism industry, and commercial aviation access. Safety concerns mainly focus on airspace conflicts below 5,000 feet AGL, particularly the mix of high-speed aircraft and small, low-speed general aviation aircraft.

Table N-3. Response Code Guide for Response to Comments on Draft EIS

Response Code	Resource Area or Comment Topic	Number of Comments per Resource Area
AQ	Air Quality	7
AS	Airspace Management	160
BR	Biological Resources	96
CI	Cumulative Impacts	26
CR	Cultural Resources	12

SA	Safety (Airspace)	67
SB	Subsistence	63
SE	Socioeconomics	77
SG	Safety (Ground)	25
WR	Water Resources	7
Total		1,361

Among other concerns are the potential dangers posed by hazardous waste, in particular unexploded ordnance and its potential for closing off access to public lands; proposed airspace restrictions over the Battle Area Complex (BAX) and Isabel Pass; and the potential for negative impact of the proposals on the populations closest to the highly used, road-accessible Alaskan beltway. Tourism is prominent among socioeconomic concerns; several commenters requested that training exercises avoid the summer and fall season due to the tourism traffic during those times of year. Of additional concern are potential impacts on personal freedoms; fundamental Alaskan values, notably including solitude and peace and quiet; and the use of nature for recreation as well as subsistence.

Copies of submitted comments are contained in the section titled [N.2](#) Public and Agency Comments. The following presents the comment and response process.

N.1.1 Public/Agency Comment Identification Guide

The paragraphs below outline the organization of comments, how ALCOM reviewed comments, and how commenters can find responses to their comments.

N.1.1.1 Comment Receipt and Review

Comment Receipt: Comments on the draft EIS included both written correspondence and oral testimony received during the public comment period. ALCOM assigned each comment a Comment Identification Number. All comments are included under the section titled [N.2](#) Public and Agency Comments. The comment submittals are printed in numerical order, by Comment Identification Number and are organized into four sections:

- Government agency comments: Comment Identification Numbers G0001 through G0028; G0023 was removed as the identical comment had been submitted via email and mail and it was duplicative.
- Alaska Native comments: Comment Identification Number T0001 through T0002
- Non-government comments: Comment Identification Numbers N0001 through N0049; N0028 was removed as the commenter running a test of the website
- Individual comments: Comment Identification Numbers I0001 through I0089

Comment Review: In accordance with 40 Code of Federal Regulations (CFR) 1503.4, ALCOM assessed and considered comments as follows.

Project personnel read and reviewed each comment letter or oral testimony carefully, and then identified and assigned comment categories to substantive comments within each comment letter or testimony. The reviewers utilized three guidelines for determining substantive comments:

- The comment questioned the Proposed Action, alternatives, or other components of the proposal.
- The comment questioned the methodology of the analysis or results.
- The comment questioned the use, adequacy, or accuracy of data.

Environmental resource specialists reviewed the comments. The resource specialists assigned a response number to each substantive comment. Response numbers are located in the section titled [N.3 Government Responses to Comments](#) in [Table N-5](#). A guide to the coding of the response numbers is in [Table N-4](#).

N.1.1.2 Locating Comments

The directory of commenters appearing in [Table N-4](#) presents the names of all commenters alphabetically by first, name of the organization (or “Private Citizen”), then last name. Each commenter can locate his/her name in this directory. As noted on the public displays, sign-in and comment sheets, providing names during the public comment process meant that each commenter understood that his/her name and comment would be made a part of the public record for this EIS. Each comment is assigned a Comment Identification Number. This is a number that was assigned to each comment form or oral testimony and is stamped on the letter or next to transcripts of oral comments. All verbal and oral comments are organized numerically by the Comment Identification Number in the next section, titled “Public/Agency Comments.”

N.1.1.3 Locating Responses to Comments

Army and Air Force responses to comments are contained in the section title [N.3 Government Responses to Comments](#). All responses are ordered by Comment Identification Number. To locate the response, the commenter should first locate the Comment Identification number in the left column. All responses for each comment letter are listed to the right, alphabetically. Each response is designed to be read along with the bracketed comment it addresses. Assistance with acronyms can be found at the front of the EIS.

Public and agency involvement is an important part of the NEPA process, and all comments are taken into consideration by the ALCOM in its decision making process. ALCOM would like to express appreciation for all comments. Many of the comments express the views and opinions of the commenters. Such comments do not require a specific response, but are included as part of the public input and are taken into consideration in the decision making process. The fact that a change in the proposed actions or the EIS analysis did not occur for a comment does not in any way reduce the value of anyone’s participation.

Table N-4. Directory of Comments

Organization (Private Citizen, etc.)	Commenter Name	Unique Identifier ID Number
Ahtna Incorporated	Martin, Kathryn	N0033-1 to N0033-27, N0033b-1 to N0033b-34, N0033c-1, N0033c-2

Good Day,

Please find attached letter with an initial comment on behalf of the Matanuska Susitna Borough on the draft JPARC EIS.

A paper copy was put in the mail today.

I was unable to submit the comment via the website.

Re: JPARC DRAFT EIS Initial Comments

Dear Sir or Madam,

I have begun review of the draft EIS for the JPARC Modernization and Enhancement.

The comment and request for clarification was determined to require a response, ideally, before the borough proceeds with comments on the effects of the proposed alternatives.

Many of the tables in Chapter 3 that include various information on the extent and effects of the Alternatives appear to fail to list the extent and effects of Alternative E Fox 3 MOA as a standalone alternative.

Many Chapter 3 tables list three Fox 3 proposal areas:

- 1 = Existing Fox 3 MOA
- 2 = Fox 3 MOA Alternative A and E
- 3 = Fox 3 MOA Alternative A

Review of Figure 2-1 and Figure 2-2 suggests that Fox 3 MOA Alternative A completely encompasses Fox 3 MOA Alternative E. These two figures lead one to believe that proposal area 2 is the same as proposal area 3.

Please clarify how the reader can discern the extent and effects of Alternative E in Chapter 3.

A reader could assume a typo in the footnotes and that the third proposal area is Alternative E. However, there are several tables that show the third proposal area to include items not included in proposal area 2. Therefore, it does not appear to be a simple typographic error

Respectfully,

Emerson Krueger
Planner

Lt. Gen Hoog,

Please find attached the request to extend by 60 days the public comment period on the JARC draft EIS. The four mayors have strong concerns that the F-16 move has not been included in this document. Therefore our request is made to extend this comment period.

Thank you ,
Luke Hopkins
Mayor

Dear Sir,

The Mayors of Fairbanks North Star Borough (FNSB), City of Fairbanks and City of North Pole respectfully requests the extension of the comment period of the Joint Pacific Alaska Range Complex draft EIS comment period for an additional 60 days to allow for further comment and analysis based on recent proposals and basing decisions the USAF proposed for Alaskan installations in February of 2012.

The Air Force, by this force restructuring action which is not considered in the current EIS draft of shifting the Eielson F-16s, associated military and civilian personnel and possible the Alaska Red Flag mission from Eielson to JBER has created undetermined impacts on Alaska air space and Alaska's population that are more than sufficient to warrant an extended period for analysis and comment by the local governments, businesses, organizations and individuals negatively affected by, as yet, unidentified impacts and Alaska's land, water and air space.

Thank you in advance.

Sincerely,

Luke T. Hopkins, Mayor
Fairbanks North Star Borough

21 COLONEL ORR: All right. Our next speaker is Mr. Luke
22 Hopkins.
23 MR. HOPKINS: Yes, thank you. Luke Hopkins, Fairbanks
24 North Star Borough, the Mayor. So I will be submitting written
25 comments that would be much more extensive. I don't have those

[REDACTED]

G0004

1 formulated at this time. I do want to state though that I am
2 disappointed that this public hearing is on a Saturday, has been
3 scheduled here in Fairbanks, one of the major -- the second
4 largest community in Alaska, that it was scheduled for Saturday.
5 There are two sessions, I understand that, but Saturday night is
6 not a good time to have a public hearing. So I'm hoping that if
7 there are further public hearings held in this overall process
8 that they are scheduled in Fairbanks. We have the best turnout
9 and information dissemination on weekdays and I would ask that
10 that please be put into any further scheduling. I don't think
11 it's appropriate to have a -- as I said, a public hearing on
12 this issue on Saturday noon, especially in the summer. Thank
13 you.

Joint Base Elmendorf-Richardson, AK 99506

To Whom It May Concern,

As Governor of the State of Alaska, I fully support the modernization and enhancement of the Joint Pacific Alaska Range Complex (JPARC). As the largest military training range in the United States, JPARC is critical to securing and defending our nation. In this heightened threat environment, it is vital that we make every effort to maximize the training opportunities for the brave men and women who serve in our Armed Forces.

I take seriously my constitutional duty as Governor to ensure the safety and security of Alaska's citizens and communities. Our Administration will continue to support the military industrial complex in Alaska while doing everything in our power to protect Alaska's pristine environment. For this reason, I believe the JPARC Environmental Impact Statement is an important and welcomed process.

I am confident that the State of Alaska and the United States Armed Forces will partner together in identifying a course of action that will allow for the expansion of military training capabilities, as well as the continued protection of our beautiful, natural environment.

Regards,

A handwritten signature in blue ink that reads "Sean Parnell".

Sean Parnell
Governor

G0006

[REDACTED]

22 REPRESENTATIVE FEIGE: Okay. I guess for the record, I'm
23 Representative Eric Feige. I represent House District 12 which
24 includes most of the JPARC area that we're talking about. One
25 of the things I'd like the folks to address is the issue of the

[REDACTED]

G0006

1 proposed floor for the Fox 3 MOA. Currently it's proposed to go
2 to 500 feet AGL and in talking to a number of the air taxi
3 operators, the pilots, for the record I'm -- I am a commercial
4 pilot with 17 years of bush flying experience here in Alaska.
5 I'm very familiar with the Talkeetna mountains and essentially
6 the rest of the Fox 3 MOA and do fly through it on a regular
7 basis in -- just in doing this job.

8 The area that really gets the most general aviation
9 traffic is the area sort of -- if you draw a line from about the
10 Susitna River across to the Alphabet Hills and south that area
11 seems to have the most -- the densest amount of general aviation
12 traffic, you know, mostly Supercubs and Cessnas and whatnot,
13 small float planes getting in and out of hunting cabins. It's
14 primarily during the non-winter months where you see a lot of
15 that traffic. It's during the, you know, primarily May to
16 October with a lot more activity occurring in the late August
17 through mid-October timeframe. It's kind of the highlight of
18 hunting season.

19 If that floor were to be raised to say 1,500 feet AGL or
20 at least a -- perhaps a new sector created within the MOA that
21 can be left off most of the time but only turned on when
22 absolutely necessary I think that would go a long way to
23 reducing some of the general aviation pilots' concerns about
24 basically getting run over by an F-16 or something larger. So
25 I'd ask that the folks putting this proposal together go ahead

G0006

1 and take a good long look at that.

2 I think alternative E where the southern boundary of the
3 Fox 3 MOA was -- instead of being south of Lake Louise it was
4 moved a little bit to the north so it only covered Tyone or Lake
5 Tyone or Lake Susitna I believe. Even if you move that southern
6 boundary in that sector to the outlet of Lake Susitna at the
7 very mouth of Tyone Creek that would be another good point to
8 put in there that would, again, relieve some of the concerns
9 that folks in the Lake Louise area have. And that's all I got
10 for now.

11 COLONEL ORR: Thank you.

12 THE REPORTER: Could you please spell your last name for
13 the record, sir?

14 REPRESENTATIVE FEIGE: It's spelled F-E-I-G-E and first
15 name is Eric with a C.

30 [REDACTED]

[REDACTED]

E

G0007

[REDACTED]

17 COLONEL ORR: Thank you. Our next speaker is Ms. Mary
18 Leith is it?
19 MS. LEITH: Leith.
20 COLONEL ORR: Leith. All right. Thank you.
21 MS. LEITH: I'm Mary Leith, Mayor of the city of Delta
22 Junction. And the city of Delta Junction wants to state that we
23 made a memorandum of agreement with the Army in '06 and upon
24 investigation it was essentially omitted from the full JPARC
25 Draft EIS and as a result we feel the EIS is -- the Draft EIS is

[REDACTED]

G0007

1 defective.

2 There -- will there be an amended version of this before a
3 final version -- of the EIS before a final version comes out is
4 something that we're concerned about. Because we think, again,
5 it should be available for public comments after we see -- after
6 you've heard what people are concerned with. We will object
7 JPARC -- to JPARC moving the Final EIS without this opportunity
8 for review and comment. We note that JPARC was provided with a
9 copy of the '06 MOA by -- at the scoping meetings and still
10 failed to address it in the Draft EIS.

11 Numerous commitments contained in the '06 MOA are violated
12 by the proposed changes in the Donnelly training area and other
13 portions of training ranges near Delta and Gulkana. A partial
14 listing of the violations will be included in our written
15 comments which will be coming. The failure to discuss these
16 violations and the necessity for them makes the EIS incomplete
17 and inaccurate.

18 The proposed changes violate many of the concerns
19 underlying the '06 MOA, including, but not limited to, danger
20 from wildfire which is a big concern in this area, danger from
21 flooding, public safety arising from increased levels of
22 activities and increased noise in the area. The issues are more
23 critical given the higher intensity levels of training, the
24 broader types of training and greater expanded use of the
25 training area. These issues are not addressed or inadequately

G0007

1 addressed in the Draft EIS.

2 When the city acquiesced to the inadequate use or ac --
3 Donnelly range expansion EIS in '06 it did so with the
4 commitment by USARAK that training at the Caktif (ph) and Backs
5 (ph) would be limited to those described in the supplemental EIS
6 prepared by USARAK. The city pressed for those facilities to be
7 located at the south end of the Donnelly training area. USARAK
8 pressed for a location at the north end of the Donnelly training
9 area immediately joining city limits. We did much of this based
10 upon our own experience with fire only a little bit prior to
11 that. The compromise described in the 2006 MOA is that the city
12 would acquiesce to the closer, more dangerous location, but only
13 with safeguards and with the Army's assurance that the training
14 activities would be limited to those described in the
15 supplemental Draft EIS. The JPARC Draft EIS fails to address
16 that bargain or JPARC's reasons for violating the bargain.
17 Which we searched it, there -- it was never mentioned once.

18 These comments to the public hearing are not a complete
19 list of our concerns. Complete written comments will be
20 submitted to you by June 7th, 2012, but unless these issues are
21 fully addressed in a supplemental Draft EIS it's more likely
22 than not that the city will challenge the adequacy of the JPARC
23 Draft EIS leaving aside any claim by the city for breach of the
24 '06 MOA. And if we have any -- like I say, we really do expect
25 to see again the Draft EIS so that -- you know, amended one so.

The TRUST
LAND OFFICE

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506

Re: JPARC Draft EIS comments

These comments are submitted on behalf of the Alaska Mental Health Trust Authority by the Trust Land Office (TLO). The TLO's scoping comments dated January 28, 2011, appear to have had no influence on development of the draft EIS. Because of this I am incorporating the TLO's previous objections by reference in this review to the draft EIS.

Our earlier objection to remotely piloted aircraft (RPA)/unmanned aerial vehicle (UAV) corridors identified over Trust land needs to be corrected and expanded. The lack of spatial references in the scoping documents resulted in an underestimation of the amount of Trust land that will be impacted by unmanned aerial vehicle overflights. The following table shows specifically the number of Trust parcels involved and the total acreage for each of the proposed corridors.

Area	Parcels	Acres
Eielson R-2205	12	1,034
Eielson R-2211	31	1,898
Ft. Wainwright R-2205	20	3,363
Ft. Wainwright R-2211	87	3,532
Total acres		9,827

Establishment of these corridors with RPA/UAV overflights can be expected to diminish value of these Trust lands for residential and/or recreational development; although difficult to quantify, any reduction in land values from these plans is unacceptable.

The TLO continues to object to inclusion of live fire on the west and northwest boundaries of the Yukon Training Area.

The TLO continues to object to expansion of any use of the Yukon I MOA that could interfere with mineral development of the Trust Salcha Block of land.

My staff contact for this review is Cindi Bettin, Senior Lands Manager, who can be contacted at (907) 269-8751 or <cindi.bettin@alaska.gov>.

Sincerely,

Greg Jones
Executive Director

G0010

Submittal ID	Commenter	Title	Organization	Topic List	Comment
G0010	gary mullen			Description of Proposed Actions and Alternatives (DOPAA), Mitigations, Airspace Management, Safety (Airspace), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	As stated in the previous comment period the airspace starting at 500 AGL throughout the MOA along with no restrictions on the scheduling of active use is unacceptable. This type of unrestricted activity is a serious hazard to wildland fire fighting and fire detection is flown in this area throughout the summer months. Simply raising the ceiling would create a safety buffer for all civilian aircraft and would allow Part 135 aircraft to operate legally within the airspace.

G0011

Submittal ID	Commenter	Title	Organization	Topic List	Comment
G0011	Charles McMahan	Chairman	Copper Basin Fish and Game Advisory Committee	General (to the EIS), Airspace Management, Safety (Airspace), All proposed actions, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	On behalf of the Copper Basin Fish And Game Advisory Committee I am formally opposing the expansion of the Fox 3 MOA and more specifically the lowering of the floor of these areas from 5,000 feet to 500 feet for military operations with high speed aircraft. There are many reasons but the main reason we oppose this is for safety purposes for the countless flights that are flown for game counts, surveys, predator control, radio collar tracking of game, and for the thousands of hours of recreational flights for hunting, fishing and other outdoor activities. By mixing high speed jets with slow and hard to see private aircraft in the same airspace, we feel safety would be severely compromised and it would be unacceptable. There are thousands of hours flown each year by hundreds of folks in these areas, and a mid-air collision would be inevitable at some point in time if these changes are made. Sincerely, Charles McMahan Chairman, Copper Basin F&G Advisory Committee

DENALI BOROUGH, ALASKA
RESOLUTION NO. 11-05

A RESOLUTION BY THE DENALI BOROUGH ASSEMBLY SUPPORTING THE NO ACTION
ALTERNATIVE CONCERNING THE JOINT PACIFIC ALASKA RANGE COMPLEX (JPARC).

WHEREAS, the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement
Environmental Impact Statement proposes extending training, including live ordnance delivery,
within the confines of the Denali Borough; and

WHEREAS, the Denali Borough Assembly is the governing body of the Denali Borough; and

WHEREAS, the areas in question are important to Denali Borough residents for a variety of uses
including hunting, recreation, and access to private property; and

WHEREAS restrictive and constraining uses of Denali Borough lands have been identified by the
extension of the in-place bombing and military lands identified in the JPARC Environmental Impact
Study.

NOW THEREFORE BE IT RESOLVED: that the Denali Borough Assembly supports the "No Action"
alternative concerning proposed realistic live ordnance delivery.

PASSED and APPROVED by the DENALI BOROUGH ASSEMBLY this 9th day of FEBRUARY,
2011.

MAYOR DAVID M TALERICO

ATTEST: 
GAIL PIEKNIK, BOROUGH CLERK

Ayes: PASSED UNANIMOUSLY
Absent: HOLMES, LAUSEN, BULARD and EVANS

Denali Borough, Alaska

RESOLUTION 11-05

Submittal ID	Commenter	Title	Organization	Topic List	Comment
G0013	Paul Hunter	External Review Coordinator	National Park Service, Alaska Regional Office	All resource areas, Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	<p>VIA ELECTRONIC MAIL: NO HARD COPY TO FOLLOW National Park Service Alaska Regional Office 240 W. 5th Avenue Anchorage, AK 99501 ALCOM Public Affairs 9480 Pease Avenue, Suite 120 JBER, AK 99506 The following comments are provided for the draft environmental impact statement (DEIS) for proposed U.S. Department of Defense military training for the Joint Pacific Alaska Range Complex (JPARC) in Alaska: While the JPARC does not include park areas directly, it is near the Wrangell-St. Elias National Park and Preserve (WRST). Impacts on subsistence in one area necessarily influence subsistence in nearby areas. For this reason, there is concern regarding the effects of training operations on subsistence users within Alaska Game Management Unit 13, especially along the Denali and Richardson Highways. The subsistence analysis for the expanded Fox 3 and new Paxon MOAs is incomplete in terms of the communities analyzed, the data upon which the analysis is based, and how the communities are classified with regard to their dependence on subsistence. Limiting the subsistence analysis to the eight communities within 20 nautical miles of the MOAs does not accurately represent patterns of resource use and distribution in the Nelchina Basin/Copper Basin area. Many communities beyond those addressed in the analysis rely on resources in the impacted areas and consequently will be negatively impacted by the proposed actions. Resources are spread across the local landscape, and local residents go to where the resources are. Sometimes that means driving substantial distances. Instead of the handful of communities included in the draft EIS, the analysis should be expanded to all those communities with a positive customary and traditional use determination (C&T) under the Federal Subsistence Program for moose, caribou or both on lands within the Fox and Paxon MOAs. Customary and traditional use determinations are based on an analysis of all available data regarding patterns of resource use and provide a more realistic basis for identifying impacted communities than the 20 nautical mile rule. In what follows, the phrase "potentially affected rural communities" refers to the communities that have C&T for moose or caribou in the MOAs.</p> <p>Also, community harvest data that is over twenty years old is not adequate to evaluate impacts to contemporary subsistence livelihoods (To those familiar with this data, the "most representative year" referred to in the analysis is identifiable as the most recent year for which comprehensive subsistence survey data are available). JPARC could follow the lead of the Alaska Gas Pipeline Project and base its analysis on updated comprehensive community subsistence data, providing funding to support updated surveys where needed. The Susitna-Watana Hydroelectric Project is similarly considering the need to conduct updated comprehensive subsistence surveys as part of its planning process.</p>

G0013

As a first step, the list of potentially affected rural communities (as discussed above) could be examined in terms of when the most recent comprehensive harvest survey took place and whether an update is scheduled in the next year or two. For those potentially affected rural communities that are five or more years out from the most recent update and not on the list for an update, funding could be provided to the Alaska Department of Fish and Game Subsistence Division or a similarly qualified independent organization to collect this information. A decision on the project should be delayed until up-to-date subsistence information for the potentially affected rural communities can be incorporated into the subsistence impact analysis. Finally, limiting the communities with high dependence on subsistence to only those with majority Alaska Native populations fails to recognize the importance of subsistence to other local residents. While it is appropriate for predominately Alaska Native communities to fall in the "high dependence" category, there are other rural communities in the area that should also be classified as such. Once up-to-date information is obtained regarding the harvest and use of subsistence resources (as described in the previous paragraph), this question should be revisited for all the potentially affected rural communities. Communities in which 80 percent or more of the households report using subsistence resources should be classified as high dependence regardless of the community's composition. Thank you for the opportunity to comment, and for extending the comment period. If you have questions, you may contact Barbara A. Cellarius, Ph.D., Cultural Anthropologist/Subsistence Specialist, Wrangell-St. Elias National Park and Preserve, P.O. Box 439, Copper Center, AK 99573-0439, Tel: 907 822 7236, Fax: 907 822 7216, Email: barbara_cellarius@nps.gov, for further information. Sincerely /s/ Paul Hunter for Joan Darnell, Team Manager Environmental Planning and Compliance

Subject: Review of Realistic Live Ordinance Delivery, EIS for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska

Dear Sir:

The following are the Alaska Department of Natural Resources' (DNR) comments and recommendations on the Definitive Action described in the EIS related to the Realistic Live Ordinance Delivery proposal. The first part of this response identifies issues related to clarity of the proposal and provides additional background information pertinent to the closure of state land. The second identifies proposed changes to the Realistic Live Ordinance Delivery option, and a final section focuses on those actions that may be required by the state to ensure public safety when live fire exercises are underway. These comments assume that either the Donnelly Training Area or the Blair Lakes Training Area are available and that the actual delivery of ordinance occurs within a limited area within each of these training areas.¹ It is also assumed that the military can or should be able to identify specific portions of the overall target area that may be affected at specific periods of the year.

Clarity of Proposal. Table 2-5 identifies Airspace Designation and the annual days of use. In the case of R-2202A, B, C, and D the number of days of use is approximately 250. In the case of R-2211 it is 170. However, on page 2-12, line 27, use days are identified as 150 annually. The text needs to be clarified to explain why R-2211 cannot be used more frequently, and there needs to be discussion, if Alternative B is selected, on the distribution of use days between the two Training Areas. It would seem that a more even distribution would result if alternative training sites were available. There also needs to be some discussion as to whether there is the ability by the military to shift the sortie approach from one attack angle/area to another in order to avoid the public recreation and hunting. This is important since the public uses particular areas at specific times of the year, and the avoidance of these areas through the selection of specific attack vectors would mitigate impacts.

Background Information. The following information was compiled through discussions with the ADF&G area biologist, staff within the Northern and South-central Regional Offices of the Division of Mining, Land, and Water (DMLW), Northern Regional Office of the Division of Parks and Outdoor Recreation, and the DMLW Mining Section.

¹ Based on discussions with JPARC personnel, the delivery of ordinance occupies a specific horizontal and vertical portion of the Drop Areas. For example, a delivery could use the area of R-2202A, as depicted in Figure 2-4. It would seem, then, that this horizontal and vertical airspace could be managed in such a way that during periods of the year when a sensitive public activity occurred near the impact zone, that the vector furthest away from this site could be selected for use at that time.

G0014

July 5, 2012
Page 2 of 4

Moose Hunting. The principal use in the ground evacuation areass is for moose hunting, conducted during two general time periods during the year – fall and winter. The fall period extends from August 15 to September 15 with the highest use period occurring from September 1 to 15. Hunting during the fall season occurs on every day of the week, including weekends. The winter hunt is primarily conducted during two time periods early winter (November 15 to December 15) and late winter (January 15 to February 28). Winter hunts generally occur on weekend days when weather conditions permits. The time period between December 15 and January 15 is generally avoided due to seasonal low temperatures. During the fall hunting period, access for hunting is generally provided by ATV trails, rivers, and airstrips. During the winter hunting period, access is generally more widespread as more areas are accessible via snowmobile. Of the areas affected by the “Definitive Actions”, the foothills on the south flank of the Alaska Range are more extensively used than the adjacent low-lying wetlands. This is because the foothills support a diversity of high quality moose habitats and generally have higher densities of moose. Furthermore, the foothills offer vantage points for use by hunters in pursuit of game.

Recreation and Other Uses. Recreation use is scant, especially in relation to other areas that are closer to the road system, with some amount of concentration occurring at Rainbow Lake and the Richardson/Clear areas. Other areas experience some use, with most of that occurring on weekends along the Rex Trail and the Wood River. Access from the east is provided by DNR Division of Forestry roads, from the north by Wood River and the airstrip near Gold King, and from the west by the Rex Trail. Much of this use is related to access to home sites in the Wood River drainage, where a state subdivision exists, and mostly occurs on the weekends, but also including Friday afternoon activity. Mining operations are limited to some exploration activity in the area of the mining claims west of the Donnelly Training Area, and it is not expected that mining activity will concentrate in the ground evacuation areas owing to the absence of mineralized deposits. Finally, depending on the source consulted, there are between six and 12 trap-lines that are run in this area. These target wolf, lynx, and martin.

In general, then, the principal use of the ground evacuation area is related to moose hunting, but this hunting occurs during two periods, as noted above. The EIS identifies only the September period for moose hunting and it uses different dates than those actually associated with this hunting activity. Mitigation measures should therefore focus on this period of time. Moreover, this pattern is also likely to continue in the future; there are no additional state land disposals that are planned and the area lacks access and economically usable resources.

Changes to Mitigation Measures. While the state is very much interested in providing a training area for the military that permits the continuation of the current forces in the Fairbanks area, this must be weighted against the impact that the Realistic Live Ordinance Delivery option upon the public and, specifically, their use of state land. Our interest is in minimizing that impact. The following changes to the current mitigation measures are recommended. We also believe that the use of both the Blair Lake and Donnelly impact areas is appropriate since this alternative (B) minimizes adverse effects to public activity on state land during high use periods, which tend to occur during the fall hunting season.

G0014

July 3, 2012
Page 3 of 4

- The number of actual days that the ground evacuation area is closed under the Definitive Actions needs to be clarified. The text on pg 2-12 line 27 states activities would be conducted 150 days annually, while the table 2-5 presented just prior indicates 250 days of annual use.
- Information provided by ALCOM planners indicates that no training activities will occur during Saturday and Sunday throughout the year. Additionally, pg 6 line 29 indicates that no training activities will occur after 7:00 pm on Friday including Saturday and Sunday. In recognition of use patterns by hunters, the year round restriction on training activities on weekends should be extended to include Friday afternoon. People using the ground evacuation area often gear up, travel to the area, and start using these areas beginning in the early afternoon of Friday. It is therefore appropriate to accommodate this activity since it is directly related to the weekend use of this area. Openings on Fridays should be restricted to 0700 to 1400 hours.
- The period when no training exercises will occur related to moose hunting season should be changed, to reflect the actual current pattern of use. Closure should occur from August 15 to September 15, November 15 to December 15, and January 15 to February 28. These dates may change over time and it is recommended that the military review the closure dates with the ADF&G at the beginning of the year (or another time that may be appropriate for the parties. The closure of the ground evacuation area between June 27 and July 11 is considered appropriate.
- Include alternatives and/or recommendations for the horizontal/vertical stratification of the attack vectors, to provide for diversity of approach and to minimize impacts on the public. See comments that immediately follow.
- During the moose hunting periods, sorties should be directed to the Blair Training Area for inert ordinance and to the use of attack vectors that are more distant from Wood River. During the same period, inert and live ordinance may use the Donnelly Training Area. Our preference is that the more northerly/easterly attack vectors be used during this period within this area.
- At other times of the year, operations are appropriate in either training area, although our preference is to use attack vectors that are to the north and east and that avoid the Wood River and Rex Trail areas in the Blair Lakes Impact Area and to use attack vectors with a similar orientation for the Oklahoma Impact Area, to avoid use areas to the west.
- In addition to these measures it is recommended that the military publish, at the beginning of the calendar year, proposed closure areas and the dates associated with this use. This will allow the public to know in advance which areas are to be avoided, especially if it is ultimately determined that both military training areas are to be used and that specific attack vectors are to be used. This information should be displayed on maps that are easy for the public to understand.
- The military should coordinate with local government and the Alaska Department of Natural Resources on an annual basis, or as needed, to provide information and maps that identify closures and public access restrictions.

G0014

July 5, 2012
Page 4 of 4

State to Prepare Regulations. As we have indicated in both discussions with military staff and in correspondence, since the military must have control over the surface at the times of ordinance delivery, the state will be obliged to develop a special use designation (SUD) for the impacted areas as well as implementing regulations. Without the use of these methods the federal government will not be able to ensure control over this area and therefore meet federal requirements for the control of surface activities in areas that it does not own.

From our perspective, the SUD and its regulations must be developed in such a way that maximum public use of the ground evacuation areas is retained while closing such areas for the minimum period of time necessary to conduct such operations. The SUD will have to identify areas and dates of closure and will have to indicate which activities are affected. (We presume that all public access to and uses within the ground evacuation areas may not to be precluded.) To ensure that we meet the test of minimizing impacts to the public, the mitigation measures that are identified above must be given careful consideration and incorporated where feasible. We also recommend Alternative B as described on p. 2-16 as the preferable option. The regulations must reflect the access recommendations contained in the SUD.

Although this letter deals with the Realistic Live Ordinance Delivery proposal, I need to emphasize that DNR has also serious concerns with the proposed Military Operating Area (for aircraft) and specifically with the probable impacts of that proposal on public access, including both land access and aircraft movement. These concerns and the state's response to these issues are to be provided, however, by the Alaska Department of Transportation and Public Facilities in separate correspondence.

Should you wish to discuss this further or require clarification of issues that are identified here, please contact Bruce Phelps, Chief, Resource Assessment and Development Section at 269-8592 or bruce.phelps@alaska.gov

Dear Lieutenant General Hoog:

The Department of the Interior has reviewed the March 2012 Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft Environmental Impact Statement (Draft EIS). The Draft EIS analyzes twelve military training improvement actions proposed on military range lands, maritime training areas, and airspace units of the U.S. Department of Defense (DoD) in Alaska.

Our comments and recommendations are made in accordance with the National Environmental Policy Act, Endangered Species Act, Fish and Wildlife Coordination Act, Bald and Golden Eagle Protection Act, Migratory Bird Treaty Act, Wild and Scenic Rivers Act, and Federal Land Policy and Management Act. Our general comments are below; specific comments are provided in Attachment 1. We believe these comments need to be addressed in the Final EIS.

Threatened and Endangered Species

The short-tailed albatross (*Phoebastria albatrus*) is listed as endangered under the Endangered Species Act of 1973 (16 U.S.C. 1531 et seq; 87 stat 884, as amended). Short-tailed albatross is a pelagic seabird whose range includes the Gulf of Alaska in the Temporary Maritime Activities Area during the months of April through October. In February 2010, the U. S. Navy (Navy) produced a *Biological Evaluation (BE) for the Gulf of Alaska Navy Training Activities* (referenced in Navy 2011). The BE assessed potential effects of Navy training activities on short-tailed albatross and described effective protective measures for the species. Information on potential effects of the proposed training activities and mitigation measures that will be used to avoid adverse impacts to short-tailed albatross in the Gulf of Alaska need to also be included in the Final EIS.

The proposed programmatic action for "Missile Live Fire for AIM-9 and AIM-120" occurs in the summer range of the short-tailed albatross in the Gulf of Alaska. Therefore, the Final EIS needs to state that DoD will initiate consultation with the Fish and Wildlife Service (FWS) for short-

G0015

tailed albatross, if the “Missile Live Fire for AIM-9 and AIM-120” action is developed into a “Definitive Action.”

Migratory Birds and Bald and Golden Eagles

As discussed below, existing data and additional information for eagles need to be presented and analyzed in the Final EIS. For example, the number of bald and golden eagles that inhabit the proposed Fox 3 and Paxson Military Operations Areas (MOAs) needs to be included and analyzed in the Final EIS. FWS maintains a geospatial database with historic eagle nest locations (see Attachment 2). These data, which represent nests easily observed from roads and highways, are available for public and agency use. It should be noted that, although not a complete depiction of all eagles in the area, the map indicates records of approximately 1,074 bald and golden eagle nest sightings within the JPARC Region of Influence as described in the Draft EIS. The Final EIS also needs to more clearly identify the number of bald and golden eagles potentially at risk during nesting periods due to DoD activities along the definitive low-level flight paths.

The Final EIS also needs to analyze mitigation measures to help ensure all nesting and/or molting migratory birds are not adversely impacted by low-level flights. Scientific literature indicates human-caused disturbance can change behavior and spatial distribution of waterfowl (Manci et al. 1988, Dahlsgren and Korschgen 1992). Effects include interruption of feeding (Madsen 1985, Ward et al. 1994), displacement from feeding areas (Kramer et al. 1979, Belanger and Bedard 1989, Conomy et al. 1998), and increased energy expenditure resulting from escaping behaviors (Korschgen et al. 1985, Jensen 1990). If disturbances are sufficiently frequent, disturbance may result in reduction of energy reserves (White-Robinson 1982, Belanger and Bedard 1990, Miller et al. 1994) important for migration (Owen and Black 1989), molt (Taylor 1993, 1995), and survival (Haramis et al. 1986). The Draft EIS acknowledges significant bird migration routes in Interior Alaska and identifies high-density areas of nesting waterfowl that underlie the Expanded Fox 3 and Paxson MOAs; page 3-47 notes “Habitat used by ducks, geese and trumpeter swans is especially important under the southwestern part of the Fox 3 expansion area and the southern part of the proposed Paxson MOA, coinciding with the larger river systems and marshy areas.” The combined Fox 3 and Paxson MOAs cover more than 2 million acres of nationally-significant waterfowl nesting habitat. Most migratory bird nesting (and the associated post-nesting molt of adult birds) occurs in Interior Alaska between April 15 and August 1. Prohibiting low-level flights (i.e., flights below 1,600 feet) between April 15 and August 1 (USFWS(2) 2007) could help reduce or eliminate the potential impact to nesting and molting migratory birds.

Moreover, the Final EIS needs to provide and analyze information on the potential effects of aircraft overflights on nesting birds. While some studies have been conducted in Alaska on potential effects of aircraft on migratory birds; as noted below, the effects appear to differ widely among species of birds, and their potential habituation to aircraft disturbance. For example, Palmer et al. (2003) studied the effect of jet aircraft overflights on the parental care of peregrine falcons (*Falco peregrinus*) breeding along the Tanana River in Alaska during 1995-1997. Military jets flying at or below 150 meters (about 500 feet) in the vicinity of specific nest cliffs within established Military Training Routes caused only subtle differences in peregrine parental behavior, no significant differences in nest attendance patterns, and no reduction in productivity

G0015

of nesting pairs (Nordmeyer 1999). Ward et al. (1999) observed the behavioral response of fall-staging flocks of Pacific Brant (*Branta bernicla nigricans*) and Canada geese (*B. canadensis taverneri*) to a variety of aircraft and found 75 percent of brant flocks and 9 percent of Canada goose flocks flew in response to overflights, with an inverse relationship between altitude and response and with the greatest response occurring at aircraft altitudes between 305 and 760 meters (1,000 to 2,500 feet). In that study, lateral distance was a more consistent predictor of response than altitude, with the greatest disturbance occurring when aircraft were within a lateral distance of ≤ 1.6 kilometer (about 1 mile) to the flock. Please refer to Attachment 3 for citations of studies we believe will help facilitate analysis of the potential impacts of aircraft overflights on nesting birds. The resulting analysis needs to be included in the Final EIS.

We are concerned the newly proposed low-altitude MOA, extending from 500 to 5,000 feet above ground level (AGL) in both the Fox 3 and Paxson MOAs, could result in significant adverse impacts to nesting migratory birds. The "Definitive Actions" in the Draft EIS are vague and do not provide specific actions to protect a given resource. For example, the Proposed Mitigation for the Fox 3 and Paxson MOAs (Table K-2 on page K-9), states: "Consult with the USFWS with regard to compliance with Bald and Golden Eagle Act and MBTA. As required, conduct bald and golden eagle surveys in proposed Fox 3 and Paxson MOAs over previously unsurveyed areas. Coordinate the results with USFWS." The Final EIS needs to clarify and specify proposed mitigation measures for "Biological Resources," including nesting migratory birds. The most commonly-recommended best management practice for protecting nesting swans, other waterbirds, and raptors (as well as other wildlife) in the vicinity of aircraft overflight is to maintain aircraft operating guidelines limiting helicopter and fixed-wing overflights to a minimum of 400-500 meters (approximately 1,300-1,600 feet AGL) with no circling over nests or aggregations (Komenda-Zehnder et al. 2003, and Churchill and Holland 2003). The National Bald Eagle Management Guidelines (USFWS 2007) recommend helicopters and fixed-winged aircraft avoid eagle nests by 1,000 feet during the breeding season, except where eagles have demonstrated tolerance for that activity. DoD needs to consult with the FWS prior to completing the Final EIS to determine what specific protective mitigation will need to be included in the Final EIS to protect nesting migratory birds.

Recreation Resources and Activities

We recommend that the footprint of the Fox 3 MOA, as described in Alternative E, be moved to the north by approximately 20 nautical miles to help reduce the negative effects on opportunities for solitude in the Lake Louise area.

We are concerned that the flight ceiling for both the FOX 3 and Paxson MOAs in both Alternatives A and E has been lowered from 5,000 feet AGL to 500 feet AGL. It should be noted that the Bureau of Land Management (BLM), through its recreation program, has documented over the years, numerous encounters by recreational users of BLM-managed lands with military overflights. These encounters have included low level overflights in the current Fox 3 MOA on the Upper Tangle Lakes and Delta River; some of these encounters included shockwaves and loud noise associated with aircraft breaking the sound barrier. We believe a lower flight ceiling in the Fox 3 MOA, combined with the same lower flight ceiling in the proposed new Paxson MOA, would likely reduce opportunities for solitude on many of the lands BLM manages. With recreational visitation to developed facilities and backcountry trails on

G0015

BLM-managed lands in this area and on the Gulkana and Delta Wild and Scenic Rivers annually exceeding 150,000 visitors, the Final EIS needs to include avoidance areas and mitigation measures that will preserve opportunities for solitude on the nationally-designated Gulkana and Delta Wild and Scenic Rivers and associated developed facilities for the Fox 3 and Paxson MOAs in both Alternatives A and E.

We recommend that the Final EIS identify a mechanism (e.g., telephone number or web site) for providing the public and land managers at least annually, or more often as appropriate, information on flights and maneuvers. This mechanism should be structured so that it offers the opportunity for recreational users to provide feedback to DoD, such as reports of non-compliance and/or complaints. This could also be used by both DoD and BLM for tracking issues and documenting successful mitigation.

Wildland Fire Management

Under the proposed action #6, newly created “corridors” between Eielson Air Force Base (AFB) to R-2211; Eielson AFB to R-2205; Allen Airfield to R-2202; R-2202 to R-2211; R-2205 to R-2202; Fort Wainwright to R-2211; and Fort Wainwright to R-2205 would, in essence, create a virtual “wall” extending nearly 90 air miles from Fairbanks and Fort Greely. This virtual “wall” would go from 1,200 AGL to 17,999 AGL. DoD has indicated that these corridors would be in operation from 07:00-19:00 Monday through Friday, or as extended by a Notice to Airmen. It is our understanding that the purpose of these corridors is to allow operation of Unmanned Aircraft Systems (UAS). According to the Draft EIS, if the Army meets all Federal Aviation Administration requirements for UAS use in the National Air Space, the Certificate of Authorization process, as it currently stands, would shut down the airspace in these proposed corridors. However, even if military Unmanned Aerial Vehicle aircraft were outfitted with Mode-C transponders, most of the BLM Alaska Fire Service (AFS) air fleet and contracted aircraft do not have Traffic Collision Avoidance avionics.

A virtual “wall” of this magnitude, as described in the Draft EIS, would likely result in significant negative effects on the BLM AFS and Alaska Department of Natural Resources Division of Forestry (DOF) joint aviation operations for fire management by cutting off access to the east for AFS and DOF, and cutting off access for DOF to the west. Three of the five wildland fire air tanker bases located in Alaska are on either side of this virtual “wall” in addition to all of the helitack and smokejumper bases. Furthermore, 1,200 to 17,999 AGL cuts off all Visual Flight Rules (VFR) traffic heading in either direction. As a result, only pressurized aircraft (the majority of which are not part of the BLM air fleet or their contracted fire management aircraft) could make the east-west transition, since only pressurized aircraft are capable of flying at altitudes of 18,000 and above.

We believe DoD needs to include in the Final EIS, an alternative approach to UAS use of air space and corridors that does not negatively impact AFS/DOF aviation operations for fire management, which are essential to helping protect life and property during wildland fires. In order to eliminate this virtual “wall,” we recommend DoD continue the practice of moving UAS between MOAs and other special use air space via ground transportation.

G0015

We appreciate the opportunity to comment on this document. For technical assistance or questions regarding threatened/endangered species or migratory birds (including bald and golden eagles), please contact Jewel Bennett at the Fairbanks FWS Field Office at 907-456-0324. For technical assistance or questions regarding BLM-managed lands, wildfire activities, or Wild and Scenic Rivers, please contact Serena Sweet at the Anchorage BLM State Office at 907-271-4543.

Sincerely,

Pamela Bergmann
Regional Environmental Officer - Alaska

G0015**Attachment 1****Specific Comments**

Page 1-36, Line 42, Section 1.6.4.3.1 Federal Agencies with Jurisdiction by Law, United States Fish and Wildlife Service: The jurisdictional responsibility of the FWS for administration of the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act needs to be added to this section.

Pages 2-6 and 2-7, Section 2.1.1.1. Alternative A: The Draft EIS states that the flight ceiling for routine training exercises in Alternative E for the Paxson MOA would be limited to 13,000 feet Mean Sea Level (MSL) and above (see page 2-7), while the flight ceiling for routine training exercises in Alternative A is 14,000 feet MSL and above (see page 2-6). The Final EIS needs to clarify why the flight ceiling is lower in Alternative E than Alternative A, given that Alternative E was designed to “provide a greater separation from the airways, jet routes, and airfields located south of the proposed airspace boundaries” (page 2-7). We believe the flight ceiling for routine training exercises in the Paxson MOA for Alternative E needs to at least match the flight ceiling for routine training exercises for the Paxson MOA in Alternative A at 14,000 feet MSL and above, and that this information needs to be included in the Final EIS.

Page 3-13, Line 13, Section 3.1.1.3.1 Alternative A: To ensure accuracy, the reference to “fire” needs to be changed here, and throughout the Final EIS, to “wildland fire.”

Page 3-30, Lines 23-26, Section 3.1.3.3.1 Alternative A, Bird/Wildlife-Aircraft Strike Hazards: The Draft EIS does not specify the “consideration of additional means for monitoring...heightened risks of bird strikes” in the Fox 3 and Paxson MOAs zones. The Final EIS needs to specify “limits that would be placed on low-altitude flight activities.” The BLM-managed lands within these proposed MOA expansions provide habitat for populations of sensitive species (e.g., trumpeter swan and golden eagle) that may be adversely affected due to bird strikes caused by military aircraft between the 500 to 2,500 foot AGL. The Final EIS also needs to include information on what scientific means would be used to track migrations of birds, since “anecdotally observing lots of birds” is insufficient. As identified in Bruderer (1997) and Gauthreaux and Belser (2003), use of radar equipment can help in determining when large flights of birds are traveling north before and/or during Major Flying Exercise (MFEs) and regular training events. In addition, monitoring weather systems, especially wind speed and direction, can also help determine when to expect higher frequencies of migrations (Gauthreaux and Belser 2003).

Page 3-31, Line 4, Section 3.1.3.3.1 Alternative A, Ground Safety: The phrase “wildlife fires” needs to be corrected in the Final EIS to read “wildland fire” and “wildfire management” needs to be corrected to read “wildland fire management.”

Page 3-31, Line 6, Section 3.1.3.3.1 Alternative A, Ground Safety: The phrase “fire management” needs to be corrected in the Final EIS to read “wildland fire management.”

G0015

Page 3-49, Lines 25-29, Section 3.1.8.3.1 Alternative A: The Final EIS needs to ensure that the proposed Fox 3 and Paxson MOAs include the 3,000-foot AGL overflight buffer over the Nelchina Caribou Herd Calving Grounds (represented in Figure 3.5 on page 3-41) annually from May 15 to June 15. This also corresponds with Wolfe et al. 2000, who recommends minimizing disturbance during critical stages (i.e., calving season) when cows were the most susceptible to elevated energy requirements.

Page 3-50, Lines 2-3, Section 3.1.8.3.1 Alternative A: We recommend maintaining in the Final EIS, a limitation of supersonic operations at altitudes of 5,000 feet AGL, or 12,000 feet MSL to help minimize noise disturbance to wildlife inhabiting the area when operations take place.

Page 3-50, Line 35, Section 3.1.8.4 Mitigations: In addition to all mitigation measures listed, the Final EIS needs to include an extension of “established noise sensitive areas” (see Figure D-3 on page D-13) that encompasses the west fork of the Gulkana National Wild and Scenic River. This extension is necessary due to the high number of active Bald Eagle nests located in that area, as identified by BLM productivity surveys conducted there every three years.

Page 3-50, Line 35, Section 3.1.8.4 Mitigations: The Final EIS needs to include the Dall sheep lambing area within the Clearwater Mountains and establish a noise sensitive area in that identified location. Identified Dall sheep spring mineral lies also need to be included in the established seasonal flight avoidance areas within the Clearwater Mountains area and upper Susitna drainages.

Page 3-99, Lines 17-18, Section 3.1.13.4 Mitigations, first bullet: We believe that use of aircraft, which has been determined as a customary and traditional use for all federal subsistence communities affected by the Fox 3 and Paxson MOAs expansion/creation, may be significantly affected during open federal subsistence hunting from August 1 through August 31, October 1 through November 30, and January 1 through March 31 (caribou season). Therefore, we recommend in the Final EIS, an extension of the time frame for “No MFEs” to cover the period of August 1 through September 30 in the Fox 3 and Paxson MOAs to avoid the federal subsistence moose season and the first half of the federal subsistence caribou season, the most intensively hunted season. Since the Fox 3 and Paxson MOAs encompass most of unencumbered BLM lands open to federal subsistence hunting, this would help ensure that potential adverse effects on federal subsistence use would be minimized.

Page 3-99, Lines 26-29, Section 3.1.13.4 Mitigations, fourth bullet: The Final EIS needs to (1) specify the time frames for this proposed mitigation; i.e., “Conduct regular meetings with regulating agencies...” and (2) identify what thresholds would be required for the USAF to “adjust flight avoidance locations, or to add new ones.”

Page 3-237, Line 15, Section 3.4.8.1 Affected Environment, Table 3-50: This table references a U.S. Geological Survey (USGS) 2011 publication; however, the publication is not included in the list of references in Section 6. This needs to be corrected in the Final EIS.

Page 3-330, Lines 23-24, Section 3.7.6.1 Affected Environment: The Draft EIS references USGS surface-water discharge data (USGS 2011-1); however, the data publication is not included in the list of references in Section 6. This needs to be corrected in the Final EIS.

G0015

Page 4 -27, Line 3, Section 4.8.8 Biological Resources: The Final EIS needs to more fully discuss cumulative impacts to biological resources in the Fox 3 and Paxson MOAs and adjacent areas. With new mineral exploration, large hydro power projects (e.g., the Susitna-Watana project), new oil/gas pipelines, and various other land developments in place or reasonably foreseeable, the cumulative effects of all of these land decisions, in addition to these airspace/temporary ground structures, could have a significant and synergistic effect on many biological resources. Therefore, we believe both direct and indirect cumulative effects issues; geographic scope; timeframe; and past, present, and reasonably foreseeable actions, need to be more fully analyzed for the proposed expansion of Fox 3 and Paxson MOAs.

Pages D-15 and 16, Table D-6 Flight Avoidance Areas: The Table D-6 Flight Avoidance Area entry for row #36 is incorrect. This needs to be corrected in the Final EIS to read “Gulkana” and not “Juliana” National Wild and Scenic River.

While we agree with the Flight Avoidance Areas depicted in Table D-6 for both the Delta and Gulkana National Wild and Scenic River areas (row 19 and row 36 [as corrected], respectively); we believe that the flight ceiling for those areas needs to be changed in the Final EIS to 5,000 feet AGL, rather than 5,000 feet MSL. Because much of the land underneath the Fox 3 and Paxson MOAs is at an elevation of approximately 1,500 to 3,000 feet above sea level (e.g., Paxson is approximately 2,500 feet above sea level), a 5,000 feet MSL ceiling is effectively only 2,000 to 3,500 feet AGL. To preserve the opportunity for solitude, overflight operations in the vicinity of the Gulkana and Delta Wild and Scenic Rivers would need to occur at least 5,000 feet AGL.

In addition, we believe the flight avoidance times of year need to be expanded to include the busy summer recreation and fall hunting seasons. Therefore, the proposed avoidance time of year for the Gulkana and Delta Wild and Scenic Rivers needs to be changed in the Final EIS from June 27 through July 11 to May 15 through September 30. These dates more closely match many of the dates for the other avoidance areas listed, and would offer more opportunities for solitude, since most of BLM’s busiest recreational facilities, as well as the Gulkana Wild and Scenic River, would be underneath the new Paxson MOA.

Pages K-19, 23, and 24, Table K-2 Proposed Mitigations: We believe “Land Use-Recreation” and “Land Use” mitigations identified to occur from June 27 to July 11 and from August 20 to September 30 for MFE operations in the Fox 3 and Paxson MOAs need to be changed in the Final EIS to include the dates of May 15 through September 30. The May 15 through September 30 timeframe dates more closely match many of the dates for the other avoidance areas listed, and offer more opportunities for solitude since most of BLM’s busiest recreational facilities as well as the Gulkana Wild and Scenic River would be contained underneath the new Paxson MOA.

Page K-20, Table K-2 Proposed Mitigations: While we support the avoidance area extending five nautical miles on either side of both the Gulkana and Delta Wild and Scenic River areas, in order to preserve solitude, a 5,000-foot AGL (rather than a 5,000 foot MSL) flight ceiling needs to be included in the Final EIS. We also believe the Final EIS needs to indicate that the expanded avoidance area will be in effect from May 15 through September 30 annually.

G0015

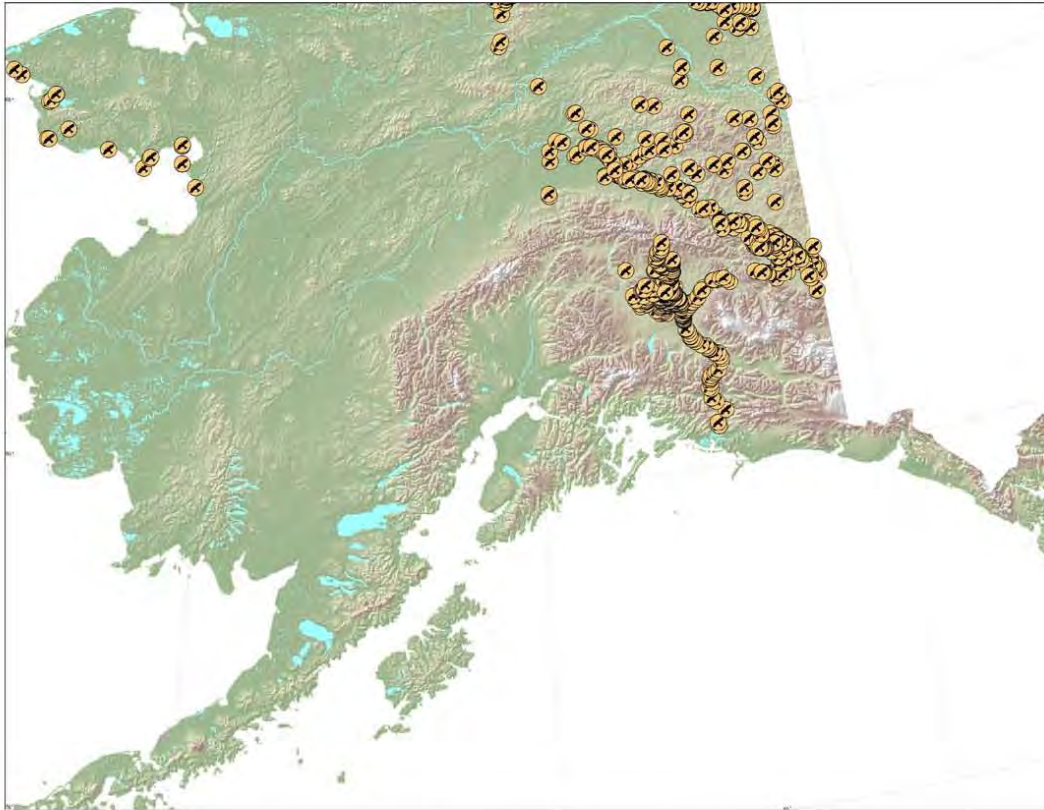

Page K-21, Table K-2 Proposed Mitigations: The Final EIS needs to identify a flight ceiling of 5,000 feet AGL, an avoidance area extending 5 nautical miles, and a timeframe to include May 15 through September 30 for the “Land Use-Recreation” mitigation. This will ensure consistency with previous comments regarding BLM-managed lands and subsistence use areas.

Page K-25, Table K-2 Proposed Mitigations: Because of the importance of reducing or eliminating the potential to ignite wildfires on BLM (and other) lands within these MOAs, we support the mitigations for the release of flares and chaff in the Fox 3 and Paxson MOAs, and recommend specifying in the Final EIS, a release altitude of at least 2,000 feet AGL between October and May, and 5,000 feet AGL between June and September.

RE: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS).*

Dear Sir,

The City of North Pole (CONP) would like to take this opportunity to comment on the Draft *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska.*

The City of North Pole supports the U.S. Air Force and Army and their missions in Alaska and recognizes the need for expanding JPARC to accommodate current and future training needs. The CONP supports the increased use of JPARC, and the planned expansion as it represents no overall negative impact on the community. However, the analysis of the environmental impacts assumes the current force structure at Eielson Air Force Base and Fort Wainwright as a baseline and does not consider an alternative force structure basing scenario identified in the Air Force's proposed fiscal year (FY) 2013 budget.

The JPARC ranges and facilities far surpass the quality and quantity of similar range functions found in other locations within the continental United States and Hawaii. The large size of the JPARC ranges allow for the use of live ammunition from all Army, Air Force, and Navy platforms and weapons systems; allows the Air Force to fly at combat speeds well over Mach 1; allows for joint exercises between the Army, Air Force, Marines, Navy, Coast Guard and our Allies in weather conditions ranging from sub-zero arctic temperatures to hot humid summer days; and results in the finest training opportunities in the United States for our soldiers, sailors, and airmen. The CONP is proactive in addressing military concerns on JPARC utilization and strives to lead the nation in willingness and ability to ensure that the military can conduct world class training missions and significantly improve readiness status.

The CONP believes it is necessary for the State of Alaska and the Department of Defense to continue working closely and cooperatively in order to enhance both the use of the JPARC and the development of the natural resources located within the JPARC, and surrounding environs, for the benefit of the State and its citizens.

The proposal by the Air Force to move the F-16 Aggressor squadron from Eielson Air Force Base (Eielson) to Joint Base Elmendorf-Richardson (JBER) could change the dynamics of JPARC

G0016

training scenarios and conduct, and could affect our community's support for JPARC use and expansion. The CONP's comments will be divided into two broad sections - comments dealing directly with the current Draft EIS and existing Alaska force structure locations, and additional comments on the potential impacts resulting from the Air Force's proposed Aggressor Squadron movement to JBER.

Review and Comments from the CONP on the Draft JPARC EIS

The CONP joins with the Fairbanks North Star Borough (FNSB) in the following comments. We understand that four factors are driving the need for enhanced and modernized training and testing facilities at JPARC. These four factors are technological advances; changes in combat tactics and techniques; the need to achieve diversified realistic training in an efficient, effective manner within the tightening budget of the Department of Defense (DoD); and the potential joint training to leverage synergies that better meet the mission training needs of Service components. The JPARC EIS separates the major actions into stand-alone activities; the CONP's comments are arranged in a similar format.

Proposed Paxon MOA Addition and Proposed Fox 3 Military Operations Area Expansion

Proposed Fox 3 MOAs: The proposed expansion of the Fox 3 MOA is a significant increase in both lateral extent and vertical dimension, lowering the floor from 5,000 ft above ground level (agl) to 500 ft agl. This is a direct conflict with areas that are frequently used by general aviation pilots and air taxi operators to support hunting camps and mining operations; to conduct air tour operations; to access recreational areas or to make other uses of this region. Due to its proximity to population centers in Anchorage, the Mat-Su Borough and Fairbanks, this airspace is heavily used by civil aviation, which results in an increased collision potential with high-speed military aircraft executing training maneuvers on MOA airspace. The civil aviation community within the FSNB is very active and large, and is a crucial part of our lifestyle.

The aviation community has experience with similar operations in the existing MOAs in the JPARC that also have low altitude floors. The Special Use Airspace Information Service (SUAIS), created as a result of the mid-1990's expansion of the MOAs that today comprise the JPARC, was a direct result of similar concerns at that time. In areas where radio coverage has been provided by the Air Force, this service has greatly reduced the potential for mid-air collision between civil and military aircraft. It has also undoubtedly reduced loss of training time when non-participating aircraft would have otherwise interrupted training activities. This service has an economic impact on military training.

While both civil and military organizations generally agree on the value that SUAIS provides for deconflicting aircraft, to date fifteen years after the MOAs were expanded aviation organizations are continuing to ask for adequate VHF radio coverage in the eastern portions of the existing JPARC complex. Correspondingly, the complaints that are received from civil aviation pilots are normally in regions of the airspace that lack adequate communication.

Recommendation: Due to the importance of the airspace for access to the southern Alaska Range, Denali Highway and Talkeetna Mountains, and to minimize the risk of mid-air collision, expansion of the Fox MOA should be limited to 5,000 feet agl, and to the smallest possible lateral extent to minimize the risk of mid-air collision.

G0016

Recommendation: Any expansion of MOA airspace must have accompanying radio coverage, staffing and other elements of the SUAIS infrastructure to allow civil pilots to communicate with U.S. Air Force Range Control during times the MOAs are active. It is also essential that the tape-recorded message, broadcast during hours when Range Control is unmanned, be more uniformly broadcast across the IPARC complex. While the current language in the Draft EIS indicates that “funding will be pursued,” given that we still do not have adequate communication in the existing airspace, it is essential that:

(a) Radio repeaters to provide adequate coverage for any expanded airspace be installed and operational before airspace is granted and,

(b) Mitigations include raising the floor any time a station is down or the system is otherwise not fully operational, to allow general aviation or commercial pilots to operate without unanticipated encounters with high-speed military traffic.

Implementation of this recommendation would greatly increase safety, better coordinate air traffic, and probably result in more efficient and frequent use of air space by the civil aviation community. The CONP is actively working on expanding its hub status for communities throughout the State and upgrades of aviation communication and navigation systems.

Paxson MOA Low Altitude Structure: The military has proposed a Paxson MOA, which covers Isabel Pass and portions of the eastern Alaska Range. The pass is a major VFR route which links northern Alaska with south central and south east regions of the State. Along the southern flanks of the Alaska Range are mining operations, recreational cabins, airstrips and lakes which experience high levels of use, which are not compatible with high speed, low level military aircraft. While the concept of VFR corridors has been discussed, the variable weather in this area is not conducive to identifying a single corridor which concentrates VFR traffic and increases the mid-air collision risk.

Recommendation: The proposed Paxson MOA should be limited to high altitude usage near and over Isabel Pass and the air traffic routes extending from the interior south to Gulkana and beyond for civil aviation.

IFR Access to MOA airspace

Considerable public investment is being made to expand airways, instrument approaches, weather reporting and remote communication outlets across Alaska. The CONP has supported these investments for several years now through support of federal funding requests and authorizing language in various FAA bills. A corresponding private investment will be made by aircraft owners to utilize these facilities. Expansion of MOAs over IFR airways precludes civil access to the airways when the MOAs are active, except for emergency and lifeguard flights. Experience gained over recent years with the Delta MOAs, which overlay V-444 between Fairbanks, Delta, Tok and Northway, have continued to demonstrate difficulties for lifeguard repositioning flights and other uses such as wild fire suppression logistical flights. Asking these operators to fly VFR is a potential reduction in safety. The loss of IFR access also impacts the economy of communities within and beyond the boundaries of the proposed airspace.

Recommendation: We would like to ensure that provisions are made to provide real-time IFR access through active MOAs. While the access may be restricted to limited flight altitudes, it is essential that civil traffic, both emergency and routine, have access to communities both inside and adjacent to MOA airspace given the critical role that civil aviation plays in the Alaskan transportation system. The relatively low volumes of IFR operations suggest that the impact to military training would be minimal. As more military actions across the globe are conducted around civil flight operations, learning how to dynamically allocate airspace will

G0016

also help the military "train like they fight." The JPARC provides an ideal test bed to develop this capability, which will require cooperation with FAA and military agencies.

When military exercises are planned that would close either MOA, the CONP would like to ensure that planners contact the state concerning hunting and fishing seasons and schedule around those time periods. CONP residents access the lands and waters within these MOAs by air and we want to ensure this access and use can continue.

Proposed Realistic Live Ordnance Delivery in proposed restricted area

The military has proposed to establish restricted airspace for live ordnance delivery impact access between Fairbanks, Delta, the Richardson Highway corridor, and the recreational and mineralized areas in the Alaska Range to the south. Further restriction of airspace limits access to these areas.

Recommendation: The existing Restricted Areas (2211 and 2202) already limit access between the road corridor communities in the region. We oppose any option that connects these two restricted areas making an overall ground barrier to access in this area. We do understand limiting access during exercises; however a ground corridor must be available for access to cabins and traditional hunting, fishing, and food gathering grounds. We also want to ensure that when the ranges are not in use, civil aviation can use the current corridor between 2211 and 2202.

The CONP supports Alternative B. Alternative B allows for greater flexibility in ranges and gives pilots a more diverse array of targets for ordnance drops.

Proposed Battle Area Complex Restricted Area

The proposal to establish restricted airspace over the Battle Area Complex southeast of Delta Junction is of particular concern to the civil aviation community. Existing Restricted Area 2202 to the west already forces civil traffic out of the most desirable terrain route to and from Isabel Pass, a major VFR corridor connecting the northern half of the state to south central and south eastern Alaska. Winds and highly variable weather associated with the Alaska Range and the mountain pass make it impractical to confine civil traffic to a single, narrow corridor in this area. Five years ago, during an EIS process, the aviation community raised the issue about the possible need for restricted airspace, given that there were other locations available to site the military training facilities that already offered this type of airspace.

Recommendation: Continue to work with the aviation community as currently many local pilots oppose the addition of restricted airspace as proposed in this area, given the need to access the mountain pass, unique weather and terrain, and presence of existing restricted airspace.

The CONP supports Alternative B, as the proposed boundaries meet the current and future expansion needs for new firing points, range impact areas and targets required for the action. Alternative B will allow the Army the necessary time for training that regulations require.

Proposed Expansion of R-2205 Restricted Area, including the DMPTR

The CONP supports the expansion of the R-2205 Restricted Area; the airspace and ground access to DMPTR and YTA are already recognized as training areas and are avoided.

Proposed Night Joint Training in all military special use airspace

The CONP supports Alternative B and feels the JPARC draft EIS adequately addresses all the concerns with extension of training hours.

G0016***Proposed Unmanned Aerial Vehicle (UAV) Corridors***

The CONP is actively supporting efforts to greatly expand the use of UAVs within the interior of Alaska. We have met with FAA personnel, the congressional delegation, state legislators, and the Governor to try and secure the region as a national UAV testing, development, and deployment center. There is no doubt that unmanned aerial vehicles play an important role in today's military, and that training is required. Integrating these vehicles into the National Airspace System is currently a topic of discussion at the national level. Restricting civil airspace to accommodate UAV transits next to the second largest air transportation hub in the state is a concern for the civil aviation community and as such the CONP would like the final JPARC EIS to develop other options besides segregated airspace.

Recommendation: While awaiting development of a FAA-certified sense-and-avoid capability that will allow full integration of unmanned aerial vehicles into the National Airspace System, we must rely on other means to separate unmanned from manned aircraft without necessarily segregating airspace. Corridors that are proposed would interfere with the safe and efficient access between Fairbanks, the Richardson Highway Corridor and the Alaska Range. Other means to separate UAV from civil aircraft should be pursued and completely developed within the final JPARC EIS.

The CONP supports Alternative B's establishment of corridors via a Certificate of Authorization (COA). The CONP is more than willing to participate in the COA process. COAs are only activated for the period at which a UAV is transiting a corridor. The CONP is confident that the COA process will work to the benefit of both the military and the civilian aviation communities.

Proposed Enhanced Access to Ground Maneuver Space Areas

The CONP supports enhanced access to the Ground Maneuver Space areas and feels the draft JPARC EIS adequately addresses the issue. The CONP played a very active role in securing funds to construct the Tanana River Bridge, seeking construction funds from federal and state appropriations processes. All told the CONP was able to secure nearly \$100 million for construction of the bridge. We support year-round access to the training grounds and improvements to the ranges.

Proposed Tanana Flats Training Area Access Road

The CONP supports construction of the Tanana Flats Training Access Road to access the Ground Maneuver Space areas and we are satisfied the draft JPARC EIS adequately addresses the issue. We support year-round access to the training grounds and improvements to the ranges.

Proposed Joint Air-Ground Integration Complex

The CONP supports development of the JAGIC and feels the draft JPARC EIS adequately addresses the various components of the issue.

Proposed Intermediate Staging Bases

The CONP supports development of the proposed Intermediate Staging Bases and believes the draft JPARC EIS adequately addresses the various components of developing the four sites. Development of the staging areas is an exciting development as the staging areas will decrease military traffic during exercises and allow the military to spend less time in transit and more time in training. Construction of the staging bases is a win-win for all parties and will strengthen the operational utility of JPARC.

G0016

Proposed Missile Live Fire for AIM-9 and AIM-120 in Gulf of Alaska

The CONP supports use of the Gulf of Alaska for training with AIM-9 and AIM-120 missiles.

Proposed Joint Precision Airdrop System

The CONP supports development of the JPADS and feels the draft JPARC EIS adequately addresses the various components of the issue.

Review and Comments on the movement of the F-16 Aggressor Squadron to JBER and the impacts on the JPARC Draft EIS

While not analyzed as an alternative in the JPARC Draft EIS, the Air Force announced plans to relocate the F-16 Aggressor Squadron, currently based at Eielson AFB in support of military training activities, to JBER. The stated purpose of the proposed move is to reduce operating costs. Statements in the Draft EIS indicate that part of the justification for expanding the FOX MOA airspace to the south, is to reduce operational costs of training exercises, by lowering the amount of fuel required to reach the training airspace from JBER. These two statements seem to be in conflict with one another. It is also not clear what the impacts of relocation of the F-16 squadron might have on airspace and the corresponding civil facilities in Anchorage, including Anchorage International Airport. The objective of the following review is to determine what facts and findings within the draft EIS require greater review for this alternative, and which impacts would invalidate or contradict the stated reasons for planned move.

The JPARC EIS was prepared for anticipated scenarios exclusive of the proposed Aggressor Squadron move. The relocation of the Aggressors is only briefly mentioned in the Draft EIS. However, discussion of the proposed FOX3 MOA expansion and creation of the PAXON MOA are predicated on reducing travel time to useable airspace from JBER and creating a common ground for JBER-assigned aircraft and the Aggressors.

The following concerns arise based on the proposed airspace expansions:

1. Cost for "dry targets" in the new airspace.
2. Transit distance for Aggressors to the YUKON range airspace.
3. Travel time vs. play time in the proposed airspace.
4. Erroneous assumption that airspace entry equates to effective airspace use.

The following considerations arise related to environmental analysis and aircraft relocation:

1. It appears precedent exists for Environmental Analysis (EA) for aircraft relocation and beddown in Alaska (F-22, C-17, C-130s); however, none of these beddowns involved introduction of new aircraft to a geographical area and airspace.
2. The JPARC EIS in no way considers the relocation of the Aggressors.
3. The assumptions and justifications for the JPARC expansion rest heavily on the Aggressors' Eielson basing.
4. The EIS does not consider the increased utilization of the FOX areas versus YUKON areas due to proximity to JBER.
5. The southern YUKON MOA/ATCAAs are currently utilized approximately 160 days annually.
6. The proposed PAXON MOA will be limited to 60 days utilization below 14,000 ft MSL.

The following considerations arise concerning estimated cost savings:

CONP JPARC EIS RESPONSE

6

G0016

1. Increased travel time by fighter aircraft result in either more support sorties (air refueling) or reduced effective training time per sortie.
2. The center points of the existing FOX3 airspace and the proposed PAXON airspace are closer to Eielson than JBER via direct routing or normally utilized ATC routing.
3. Recovery routings/procedures may be less efficient and more flight time consuming due to airspace congestion and weather requirements at JBER.
4. Weather requirements for additional reserve fuel demand reduced training time or refueling support for JBER-based aircraft.

Primarily, the justification for the expansion of the FOX/PAXON airspaces is fuel savings based on current usage of FOX3, PAXON and STONY. The EIS reasons that FOX3/PAXON usage will reflect current usage plus half of the STONY sorties, totaling 11,237 sorties per year compared to 9,987 sorties as reported in 2010. Either the Aggressors will commute from JBER to the YUKON1/2 areas, where over 8,000 sorties occurred in 2010, or the FOX/PAXON/STONY airspaces will see a substantially higher utilization rate than the 2010 baseline identified by the EIS for its estimated utilization rates of the proposed expanded airspace.

In an effort to provide a comprehensive review of the JPARC EIS and better understand related Alaskan military airspace issues, a review was completed of the Letters of Agreement regarding Red Flag-Alaska airspace and recovery procedures, Description of Military Airspace (DOMA), Alaskan Military Procedures and ATC Service, and FAA 7400.8U, *Special Use Airspace*. The review revealed no additional significant factors related specifically to the relocation of the Aggressor Squadron.

In summary, the JPARC EIS related to the FOX3/PAXON expansion faces practical challenges related to the relative inaccessibility of the YUKON areas for JBER-based aircraft without substantially reduced training time or additional refueling support.

Expanded Data Points

Airspace Expansions:

1. According to the EIS, page 2-3 lines 14-17, the dry targets will be added to both new MOAs and utilized six times annually for 10 days each occurrence. Dry targets occupy approximately 1 acre and are either emitters or simulated threat vehicles (page 1-24, lines 25-32). The proposed dry targets are temporary in nature and will be placed on military lands, federal lands or private property with landowner concurrence. Civilian contractors manage the threat emitters, placing, maintaining and operating them for the Air Force. Either additional threats will be required or threats from other ranges will be relocated. In either case, it appears additional expense would be incurred.
2. Transit distance for the Eielson-based Aggressors to either YUKON or FOX airspace is negligible. Multiple Standard Instrument Departures (SIDs) exist for Eielson AFB and were analyzed for purposes of transit distance. The distances discussed below relate to the nearest entry gate to the airspace and do not equate to effective flight airspace or the scheduled "play areas." MOAs and ATCAAs are accessed through entry gates – points on the boundaries of the airspace where ATC can initiate or terminate IFR/VFR clearances and issue airspace clearances. These gates can be likened to the

CONP JPARC EIS RESPONSE

7

G0016

ticket counters at a sports arena. Everybody enters through the limited access/egress points, but may wander freely once cleared into the arena.

The FOX-FIVE departure from Eielson delivers aircraft to the AXEM gate (western corner of YUKON1/2 MOAs) in 52 nautical miles (NM), and the FALCO FOUR arrival return routes aircraft from YUKON2 via the EYEGO gate in 49NM. Access to this airspace from JBER via the EEEGL TWO departure would require 287NM to reach the AXEM gate and a similar distance to return. The STQON gate to the STONY airspace is approximately 85 miles from JBER, though one can assume the STONY airspace is less desirable airspace by reviewing the 2010 utilization figures compared to the FOX or PAXON ATCAAs referenced on page 2-5 in Table 2-2. Additionally, the justification for the enhanced FOX/PAXON airspace includes the desire to utilize closer airspace as discussed on lines 14 and 26 of page 2-5.

The possible solutions to the issue of transit distance include, but are not limited to: 1) extended sortie durations permitted by limited maneuvering 2) extended sorties through additional air refueling requirements 3) greater reliance on FOX/PAXON airspace than is forecast in the March 2012 Draft JPARC EIS.

3. Transit time diminishes "play time", or opportunities to execute training events due primarily to lost fuel efficiencies. Foregoing discussions related to transit distance reveal transit times approaching 30 minutes each way to enter the YUKON airspace, while access to the existing FOX3 MOA via the HOJOE gate/EEEEGL TWO SID from JBER requires approximately 15 minutes, with anticipated return legs of similar duration. Contrast the travel distance with an Eielson-based aircraft utilizing the ARUNY ONE departure to enter the DICEMAN Airspace package (EIELSON MOA/ATCAA, FOX1 MOA/ATCAA, FOX2 ATCAA, FOX3 MOA/ATCAA as described in the 11th AF Airspace Handbook, 29 Dec 2010). The Eielson aircraft would be in the FOX3 ATCAA in approximately 10 minutes and could reach HOJOE (the southernmost gate in FOX3 and an entry gate for JBER aircraft) in approximately the same time as a JBER-based aircraft of the same make.
4. While transit time to the airspace is a justification for expansion of the FOX3 MOA and creation of the PAXON MOA as outlined in the Draft JPARC EIS, transit time is only part of the efficiency equation. Traditionally, and unless revised once the airspace is expanded, the air combat (ACBT) for Large Force Exercises (LFEs) occurs in airspace centered slightly north of Eielson. The expectation of realized efficiencies is seemingly blind to the utilization patterns of the airspace by participants both north and south of the Alaska Range.

Environmental Study:

1. Table 4-2 summarizes a variety of environmental research related to prior DoD actions including relocation or initial beddown of Air Force aircraft. An accepted precedent exists for environmental research limited to an Environmental Assessment (EA) in conjunction with aircraft relocation. Included in the table are the relocation of the 176th Wing from Kulis ANGB to JBER AFB (20 aircraft), F-22A beddown at JBER (including construction of support facilities), C-17 initial beddown at JBER (replacing C-130s), and the F-22A plus up (replacement of F-15s). Every instance cited, with the exception of the Kulis relocation, involved

G0016

replacement of some or all aircraft, with minimal changes in overall assigned aircraft with similar mission capabilities/sets. The Kullis relocation is most disruptive to the movement toward an EIS requirement for the Aggressor relocation since it involved moving 20 aircraft, construction, renovation and reassignment of personnel. However, the Kullis relocation did not alter airspace utilization on the broader scale considering the relocated aircraft remained in the same terminal area (the Anchorage local air traffic area).

2. Chapter 4, *Cumulative Impacts and Secondary Effects*, paragraph 4.8.1, page 4-19, lines 25-34 expressly states, "Any future basing of a new aircraft type in Alaska, or the relocation of F-16s from Eielson AFB to JBER, as is now being considered, would require that the appropriate environmental impact analysis processes be completed to include the potential impacts of such actions on all military and civil aviation airspace uses." Furthermore, the primary justification for the expansions of the FOX3 airspace and creation of the PAXON MOA is centralization of training airspace for the Aggressors and JBER based aircraft (paragraphs 1.5.1.1 and 1.5.1.2, Table 1-3 and page 2-2, lines 5-10,15).
3. The relocation of the Aggressors not only requires its own assessment of environmental effects, but consideration of the alternative substantially changes the character of the Draft JPARC EIS. As cited in the previous paragraph, the Draft EIS assumes the F-16s operate from Eielson. Justifications for airspace expansion, including utilization rates and efficiencies are predicated on Aggressors originating and recovering to Eielson. No mention of F-16 relocation exists in the Draft JPARC EIS with the exception of the requirement for additional study should such a relocation occur.
4. The Draft JPARC EIS predicates its MOA/ATCAA usage on status quo basing for JBER and Eielson. Appendix D to the Draft JPARC EIS, Table D-2, *Description and Representative Annual Use of Alaska Training Airspace*, reflects FOX3 sortie totals of 9,877. STONY ATCAA reflects 2,500 and the YUKON1/2 ATCAA show 8,034 and 7,076 respectively. Table 2-2 on page 2-5 of the Draft EIS reflects a new estimated usage of the FOX3/PAXON airspace under the proposed changes of 11,237 per year. The assumptions reflect a relocation of prior STONY missions but no relocation of the over 8,000 sorties in the YUKON airspace to the north. While approximately 3,600 of the FOX3 sorties were F-16s (not including F-16Cs) in 2010 according to Table 2-3, similar numbers for the YUKON airspace are not available. Assuming a similar ratio in the north, an additional 2,400 F-16 sorties may either lose training effectiveness or require relocation to the southern airspaces. Additionally, skewing the results are the over 2,700 F-22A sorties in the FOX3 airspace since these aircraft rarely access the YUKON airspace.
5. According to Appendix D, Table D-2, the YUKON1/2 airspace is actively utilized 163 days and 104 days annually, respectively. The FOX3 airspace is utilized approximately 211 days annually. As detailed in the previous paragraph, the Draft JPARC EIS does not consider the shift in sorties associated with the relocation of the F-16s.

CONP JPARC EIS RESPONSE

9

G0016

6. As detailed on page 2-6, the PAXON MOA low sector (below 14,000' MSI) would only be available for Major Flying Exercises (MFEs) for up to 60 days annually, consisting of 6, ten-day windows. This is of interest primarily to air-to-ground assets and has limited applicability to the Aggressors as they complete their training sorties. It may, however, continue to force other participants in non-MFE training events to utilize Interior ranges. The Aggressors, in their efforts to penetrate defensive air sovereignty assets to eliminate adversary combat air support (CAS), will continue to operate in the airspace centered over Eielson AFB.

Cost savings:

1. As discussed previously, the additional transit time/distance will erode cost benefits that may be claimed through relocation of the Aggressors to JBER. The accounting methods associated with determining cost savings are incongruous at times. The arguments related to cost savings seldom consider the quality of the flight time for the cost expended. Flight hours are allocated to units to complete their required training events to maintain a combat ready or mission ready status. The flight hour totals may remain unchanged or even diminish due to constrained budgets. This constraint will demand more training/proficiency events per flight hour expended. Virtually no recurrent training requirements for Air Force pilots are accomplished during en route cruise flight. To combat this loss of training time due to fuel/flight hours expended in transit, fighter aircraft require additional fuel to expend during high performance maneuvers in the reserved airspace. The unrecognized/hidden cost is the air refueling sorties generated to meet the fighter training requirement. While it is true that air refueling aircrews also require recurrency training, the potential volume of additional refueling sorties required may exceed the maximum training events required by air refueling assets and detract from other aircrew training by demanding extended loiter times and larger offloads.
2. The center points of the PAXON and FOX3 ATCAAs, as currently published, are closer to Eielson than JBER. The center point of the PAXON ATCAA is 106NM from Eielson via the HAWGG departure to the SLICK gate. The same point is 179NM via the EEEGL TWO departure, HOJOE gate in FOX3, then direct to the PAXON center point. The center point of the FOX3 ATCAA is 100NM from Eielson via the ARUNY ONE departure transiting through the EIELSON MOA and the FOX1 ATCAA/MOA. The same point is 153NM from JBER via the EEEGL TWO departure and HOJOE gate.

One should note the air combat for MFEs occurs in an area centered over Eielson and its aircraft can be in the airspace within a couple minutes of departure.

3. According to the FAA Administrator's Factbook, March 2011, Anchorage TRACON (Terminal Radar Control) ranked 36th busiest nationwide in calendar year 2009 with over 261,000 aircraft operations. CY2010 reported over 277,000 operations according to the Administrator (pg. 14). Fairbanks TRSA (Terminal Radar Service Area) is not listed in the report. However, according to the Alaska DOT website and the FAA data sheet for Fairbanks International Airport, Fairbanks experienced over 133,000 aircraft operations in CY2009. The

G0016

congested nature of the Anchorage airspace in contrast to the relatively unencumbered access to the ranges enjoyed by Interior aircraft bears further research. A deeper analysis may reveal appreciable minutes of time lost due to required spacing for IFR aircraft and deconfliction in the Anchorage terminal area in contrast to the ease of recovery to Eielson AFB.

4. Weather considerations plague both locations. Eielson suffers from the bitter cold of winter while Anchorage experiences strong winds and occasional IFR conditions. Aircraft operating in the JPARC require fuel reserves – greater reserves for IFR terminal weather – and subsequently lose training time. Due to the distances discussed previously, JBER aircraft will lose even more of the already reduced play time when the requirement to carry fuel for an alternate field exists.

Thank you for the opportunity to offer comment on the *Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska*. The CONP looks forward to continuing our productive relationship with Alaska Command, the U.S. Air Force, and the U.S. Army.

Sincerely,

Douglas W. Isaacson
Mayor

RE: *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS).*

Dear Sir,

As Mayor of the Fairbanks North Star Borough (FNSB) I would like to take this opportunity to comment on the Draft *Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska.*

The FNSB wholeheartedly supports the U.S. Air Force and Army and their missions in Alaska and welcomes the expansion of the JPARC to accommodate current and future training needs. The FNSB supports the increased use of JPARC, and the planned expansion as this action is beneficial to the community, Alaska Command, and the U.S. Military with no overall negative impact on the community. However, the analysis of the environmental impacts assumes the current force structure at Eielson Air Force Base and Fort Wainwright as a baseline and does not consider an alternative force structure basing scenario identified in the Air Force's proposed fiscal year (FY) 2013 budget.

The JPARC ranges and facilities located within the FNSB far surpass the quality and quantity of similar range functions found in other locations within the continental United States and Hawaii. The large size of the JPARC ranges allow for the use of live ammunition from all Army, Air Force, and Navy platforms and weapons systems; allows the Air Force to fly at combat speeds well over Mach 1; allows for joint exercises between the Army, Air Force, Marines, Navy, Coast Guard and our Allies in weather conditions ranging from sub-zero arctic temperatures to hot humid summer days; and results in the finest training opportunities in the United States for our soldiers, sailors, and airmen. The FNSB is proactive in addressing military concerns on JPARC utilization and strives to lead the nation in willingness and ability to ensure that the military can conduct world class training missions and significantly improve readiness status.

The proposal by the Air Force to move the F-16 Aggressor squadron from Eielson Air Force Base (Eielson) to Joint Base Elmendorf-Richardson (JBER) could change the dynamics of JPARC training scenarios and conduct, and could affect our community's support for JPARC use and expansion. The FNSB's comments will be divided into two broad sections - comments dealing directly with the current Draft EIS and existing Alaska force structure locations, and additional comments on the potential impacts resulting from the Air Force's proposed Aggressor Squadron movement to JBER.

Review and Comments from the FNSB on the Draft JPARC EIS

G0017

techniques; the need to achieve diversified realistic training in an efficient, effective manner within the tightening budget of the Department of Defense (DoD); and the potential joint training to leverage synergies that better meet the mission training needs of Service components. The JPARC EIS separates the major actions into stand-alone activities; the FNSB's comments are arranged in a similar format.

Proposed Paxson MOA Addition and Proposed Fox 3 Military Operations Area Expansion

Proposed Fox 3 MOAs: The proposed expansion of the Fox 3 MOA is a significant increase in both lateral extent and vertical dimension, lowering the floor from 5,000 ft above ground level (agl) to 500 ft agl. This is a direct conflict with areas that are frequently used by general aviation pilots and air taxi operators to support hunting camps and mining operations; to conduct air tour operations; to access recreational areas or to make other uses of this region. Due to its proximity to population centers in Anchorage, the Mat-Su Borough and Fairbanks, this airspace is heavily used by civil aviation, which results in an increased collision potential with high-speed military aircraft executing training maneuvers on MOA airspace. The civil aviation community within the FSNB is very active and large, and is a crucial part of our lifestyle.

The aviation community has experience with similar operations in the existing MOAs in the JPARC that also have low altitude floors. The Special Use Airspace Information Service (SUAIS), created as a result of the mid-1990's expansion of the MOAs that today comprise the JPARC, was a direct result of similar concerns at that time. In areas where radio coverage has been provided by the Air Force, this service has greatly reduced the potential for mid-air collision between civil and military aircraft. It has also undoubtedly reduced loss of training time when non-participating aircraft would have otherwise interrupted training activities. This service has an economic impact on military training.

While both civil and military organizations generally agree on the value that SUAIS provides for deconflicting aircraft, to date—fifteen years after the MOAs were expanded—aviation organizations are continuing to ask for adequate VHF radio coverage in the eastern portions of the existing JPARC complex. Correspondingly, the complaints that are received from civil aviation pilots are normally in regions of the airspace that lack adequate communication.

Recommendation: Due to the importance of the airspace for access to the southern Alaska Range, Denali Highway and Talkeetna Mountains, and to minimize the risk of mid-air collision, expansion of the Fox MOA should be limited to 5,000 feet agl, and to the smallest possible lateral extent to minimize the risk of mid-air collision.

Recommendation: Any expansion of MOA airspace must have accompanying radio coverage, staffing and other elements of the SUAIS infrastructure to allow civil pilots to communicate with U.S. Air Force Range Control during times the MOAs are active. It is also essential that the tape-recorded message, broadcast during hours when Range Control is unmanned, be more uniformly broadcast across the JPARC complex. While the current language in the Draft EIS indicates that "funding will be pursued," given that we still do not have adequate communication in the existing airspace, it is essential that:

- (a) Radio repeaters to provide adequate coverage for any expanded airspace be installed and operational before airspace is granted and,
- (b) Mitigations include raising the floor any time a station is down or the system is otherwise not fully operational, to allow general aviation or commercial pilots to operate without unanticipated encounters with high-speed military traffic.

Implementation of this recommendation would greatly increase safety, better coordinate air traffic, and probably result in more efficient and frequent use of air space by the civil aviation community.

G0017

The FNSB is actively working on expanding its hub status for communities throughout the State and upgrades of aviation communication and navigation systems.

Paxson MOA Low Altitude Structure: The military has proposed a Paxson MOA, which covers Isabel Pass and portions of the eastern Alaska Range. The pass is a major VFR route which links northern Alaska with south central and south east regions of the State. Along the southern flanks of the Alaska Range are mining operations, recreational cabins, airstrips and lakes which experience high levels of use, which are not compatible with high speed, low level military aircraft. While the concept of VFR corridors has been discussed, the variable weather in this area is not conducive to identifying a single corridor which concentrates VFR traffic and increases the mid-air collision risk.

Recommendation: The proposed Paxson MOA should be limited to high altitude usage near and over Isabel Pass and the air traffic routes extending from the interior south to Gulkana and beyond for civil aviation.

IFR Access to MOA airspace

Considerable public investment is being made to expand airways, instrument approaches, weather reporting and remote communication outlets across Alaska. The FNSB has supported these investments for several years now through support of federal funding requests and authorizing language in various FAA bills. A corresponding private investment will be made by aircraft owners to utilize these facilities. Expansion of MOAs over IFR airways precludes civil access to the airways when the MOAs are active, except for emergency and lifeguard flights. Experience gained over recent years with the Delta MOAs, which overlay V-444 between Fairbanks, Delta, Tok and Northway, have continued to demonstrate difficulties for lifeguard repositioning flights and other uses such as wild fire suppression logistical flights. Asking these operators to fly VFR is a potential reduction in safety. The loss of IFR access also impacts the economy of communities within and beyond the boundaries of the proposed airspace.

Recommendation : We would like to ensure that provisions are made to provide real-time IFR access through active MOAs. While the access may be restricted to limited flight altitudes, it is essential that civil traffic, both emergency and routine, have access to communities both inside and adjacent to MOA airspace given the critical role that civil aviation plays in the Alaskan transportation system. The relatively low volumes of IFR operations suggest that the impact to military training would be minimal. As more military actions across the globe are conducted around civil flight operations, learning how to dynamically allocate airspace will also help the military "train like they fight." The JPARC provides an ideal test bed to develop this capability, which will require cooperation with FAA and military agencies.

When military exercises are planned that would close either MOA, the FNSB would like to ensure that planners contact the state concerning hunting and fishing seasons and schedule around those time periods. FNSB residents access the lands and waters within these MOAs by air and we want to ensure this access and use can continue.

Proposed Realistic Live Ordnance Delivery in proposed restricted area

The military has proposed to establish restricted airspace for live ordnance delivery impact access between Fairbanks, Delta, the Richardson Highway corridor, and the recreational and mineralized areas in the Alaska Range to the south. Further restriction of airspace limits access to these areas.

Recommendation : The existing Restricted Areas (2211 and 2202) already limit access between the road corridor communities in the region. We oppose any option that connects these two restricted areas

G0017

making an overall ground barrier to access in this area. We do understand limiting access during exercises; however a ground corridor must be available for access to cabins and traditional hunting, fishing, and food gathering grounds. We also want to ensure that when the ranges are not in use, civil aviation can use the current corridor between 2211 and 2202.

The FNSB supports Alternative B. Alternative B allows for greater flexibility in ranges and gives pilots a more diverse array of targets for ordnance drops.

Proposed Battle Area Complex Restricted Area

The proposal to establish restricted airspace over the Battle Area Complex southeast of Delta Junction is of particular concern to the civil aviation community. Existing Restricted Area 2202 to the west already forces civil traffic out of the most desirable terrain route to and from Isabel Pass, a major VFR corridor connecting the northern half of the state to south central and south eastern Alaska. Winds and highly variable weather associated with the Alaska Range and the mountain pass make it impractical to confine civil traffic to a single, narrow corridor in this area. Five years ago, during an EIS process, the aviation community raised the issue about the possible need for restricted airspace, given that there were other locations available to site the military training facilities that already offered this type of airspace.

Recommendation: Continue to work with the aviation community as currently many local pilots oppose the addition of restricted airspace as proposed in this area, given the need to access the mountain pass, unique weather and terrain, and presence of existing restricted airspace.

The FNSB supports Alternative B, as the proposed boundaries meet the current and future expansion needs for new firing points, range impact areas and targets required for the action. Alternative B will allow the Army the necessary time for training that regulations require.

Proposed Expansion of R-2205 Restricted Area, including the DMPTR

The FNSB supports the expansion of the R-2205 Restricted Area; the airspace and ground access to DMPTR and YTA are already recognized as training areas and are avoided.

Proposed Night Joint Training in all military special use airspace

The FNSB supports Alternative B and feels the JPARC draft EIS adequately addresses all the concerns with extension of training hours.

Proposed Unmanned Aerial Vehicle (UAV) Corridors

The FNSB is actively supporting efforts to greatly expand the use of UAVs within the interior of Alaska. We have met with FAA personnel, the congressional delegation, state legislators, and the Governor to try and secure the region as a national UAV testing, development, and deployment center. There is no doubt that unmanned aerial vehicles play an important role in today's military, and that training is required. Integrating these vehicles into the National Airspace System is currently a topic of discussion at the national level. Restricting civil airspace to accommodate UAV transits next to the second largest air transportation hub in the state is a concern for the civil aviation community and as such the FNSB would like the final JPARC EIS to develop other options besides segregated airspace.

Recommendation: While awaiting development of a FAA-certified sense-and-avoid capability that will allow full integration of unmanned aerial vehicles into the National Airspace System, we must rely on other means to separate unmanned from manned aircraft without necessarily segregating airspace. Corridors that are proposed would interfere with the safe and efficient access between Fairbanks, the Richardson Highway Corridor and the Alaska Range. Other means to separate UAV from civil aircraft should be pursued and completely developed within the final JPARC EIS.

G0017

The FNSB supports Alternative B's establishment of corridors via a Certificate of Authorization (COA). The FNSB is more than willing to participate in the COA process. COAs are only activated for the period at which a UAV is transiting a corridor. The FNSB is confident that the COA process will work to the benefit of both the military and the civilian aviation communities.

Proposed Enhanced Access to Ground Maneuver Space Areas

The FNSB supports enhanced access to the Ground Maneuver Space areas and feels the draft JPARC EIS adequately addresses the issue. The FNSB played a very active role in securing funds to construct the Tanana River Bridge, seeking construction funds from federal and state appropriations processes. All told the FNSB was able to secure nearly \$100 million for construction of the bridge. We support year-round access to the training grounds and improvements to the ranges.

Proposed Tanana Flats Training Area Access Road

The FNSB supports construction of the Tanana Flats Training Access Road to access the Ground Maneuver Space areas and we are satisfied the draft JPARC EIS adequately addresses the issue. We support year-round access to the training grounds and improvements to the ranges.

Proposed Joint Air-Ground Integration Complex

The FNSB supports development of the JAGIC and feels the draft JPARC EIS adequately addresses the various components of the issue.

Proposed Intermediate Staging Bases

The FNSB supports development of the proposed Intermediate Staging Bases and believes the draft JPARC EIS adequately addresses the various components of developing the four sites. Development of the staging areas is an exciting development as the staging areas will decrease military traffic during exercises and allow the military to spend less time in transit and more time in training. Construction of the staging bases is a win-win for all parties and will strengthen the operational utility of JPARC.

Proposed Missile Live Fire for AIM-9 and AIM-120 in Gulf of Alaska

The FNSB supports use of the Gulf of Alaska for training with AIM-9 and AIM-120 missiles.

Proposed Joint Precision Airdrop System

The FNSB supports development of the JPADS and feels the draft JPARC EIS adequately addresses the various components of the issue.

Review and Comments on the movement of the F-16 Aggressor Squadron to JBER and the impacts on the JPARC Draft EIS

While not analyzed as an alternative in the JPARC Draft EIS, the Air Force announced plans to relocate the F-16 Aggressor Squadron, currently based at Eielson AFB in support of military training activities, to JBER. The stated purpose of the proposed move is to reduce operating costs. Statements in the Draft EIS indicate that part of the justification for expanding the FOX MOA airspace to the south, is to reduce operational costs of training exercises, by lowering the amount of fuel required to reach the training airspace from JBER. These two statements seem to be in conflict with one another. It is also not clear what the impacts of relocation of the F-16 squadron might have on airspace and the corresponding civil facilities in Anchorage, including Anchorage International Airport. The objective of the following review is to determine what facts and findings within the draft EIS require greater review for this alternative, and which impacts would invalidate or contradict the stated reasons for planned move.

G0017

The JPARC EIS was prepared for anticipated scenarios exclusive of the proposed Aggressor Squadron move. The relocation of the Aggressors is only briefly mentioned in the Draft EIS. However, discussion of the proposed FOX3 MOA expansion and creation of the PAXON MOA are predicated on reducing travel time to useable airspace from JBER and creating a common ground for JBER-assigned aircraft and the Aggressors.

The following concerns arise based on the proposed airspace expansions:

1. Cost for "dry targets" in the new airspace.
2. Transit distance for Aggressors to the YUKON range airspace.
3. Travel time vs. play time in the proposed airspace.
4. Erroneous assumption that airspace entry equates to effective airspace use.

The following considerations arise related to environmental analysis and aircraft relocation:

1. It appears precedent exists for Environmental Analysis (EA) for aircraft relocation and beddown in Alaska (F-22, C-17, C-130s); however, none of these beddowns involved introduction of new aircraft to a geographical area and airspace.
2. The JPARC EIS in no way considers the relocation of the Aggressors.
3. The assumptions and justifications for the JPARC expansion rest heavily on the Aggressors' Eielson basing.
4. The EIS does not consider the increased utilization of the FOX areas versus YUKON areas due to proximity to JBER.
5. The southern YUKON MOA/ATCAAs are currently utilized approximately 160 days annually.
6. The proposed PAXON MOA will be limited to 60 days utilization below 14,000 ft MSL.

The following considerations arise concerning estimated cost savings:

1. Increased travel time by fighter aircraft result in either more support sorties (air refueling) or reduced effective training time per sortie.
2. The center points of the existing FOX3 airspace and the proposed PAXON airspace are closer to Eielson than JBER via direct routing or normally utilized ATC routing.
3. Recovery routings/procedures may be less efficient and more flight time consuming due to airspace congestion and weather requirements at JBER.
4. Weather requirements for additional reserve fuel demand reduced training time or refueling support for JBER-based aircraft.

Primarily, the justification for the expansion of the FOX/PAXON airspaces is fuel savings based on current usage of FOX3, PAXON and STONY. The EIS reasons that FOX3/PAXON usage will reflect current usage plus half of the STONY sorties, totaling 11,237 sorties per year compared to 9,987 sorties as reported in 2010. Either the Aggressors will commute from JBER to the YUKON1/2 areas, where over 8,000 sorties occurred in 2010, or the FOX/PAXON/STONY airspaces will see a substantially higher utilization rate than the 2010 baseline identified by the EIS for its estimated utilization rates of the proposed expanded airspace.

In an effort to provide a comprehensive review of the JPARC EIS and better understand related Alaskan military airspace issues, a review was completed of the Letters of Agreement regarding Red Flag-Alaska airspace and recovery procedures, Description of Military Airspace (DOMA), Alaskan Military Procedures and ATC Service, and FAA 7400.8U, *Special Use Airspace*. The review revealed no additional significant factors related specifically to the relocation of the Aggressor Squadron.

G0017

In summary, the JPARC EIS related to the FOX3/PAXON expansion faces practical challenges related to the relative inaccessibility of the YUKON areas for JBER-based aircraft without substantially reduced training time or additional refueling support.

Expanded Data Points

Airspace Expansions:

1. According to the EIS, page 2-3 lines 14-17, the dry targets will be added to both new MOAs and utilized six times annually for 10 days each occurrence. Dry targets occupy approximately 1 acre and are either emitters or simulated threat vehicles (page 1-24, lines 25-32). The proposed dry targets are temporary in nature and will be placed on military lands, federal lands or private property with landowner concurrence. Civilian contractors manage the threat emitters, placing, maintaining and operating them for the Air Force. Either additional threats will be required or threats from other ranges will be relocated. In either case, it appears additional expense would be incurred.
2. Transit distance for the Eielson-based Aggressors to either YUKON or FOX airspace is negligible. Multiple Standard Instrument Departures (SIDs) exist for Eielson AFB and were analyzed for purposes of transit distance. The distances discussed below relate to the nearest entry gate to the airspace and do not equate to effective fight airspace or the scheduled "play areas." MOAs and ATCAAs are accessed through entry gates – points on the boundaries of the airspace where ATC can initiate or terminate IFR /VFR clearances and issue airspace clearances. These gates can be likened to the ticket counters at a sports arena. Everybody enters through the limited access/egress points, but may wander freely once cleared into the arena.

The FOX-FIVE departure from Eielson delivers aircraft to the AXEM gate (western corner of YUKON1/2 MOAs) in 52 nautical miles (NM), and the FALCO FOUR arrival return routes aircraft from YUKON2 via the EYEGO gate in 49NM. Access to this airspace from JBER via the EEEGL TWO departure would require 287NM to reach the AXEM gate and a similar distance to return. The STOON gate to the STONY airspace is approximately 85 miles from JBER, though one can assume the STONY airspace is less desirable airspace by reviewing the 2010 utilization figures compared to the FOX or PAXON ATCAAs referenced on page 2-5 in Table 2-2. Additionally, the justification for the enhanced FOX/PAXON airspace includes the desire to utilize closer airspace as discussed on lines 14 and 26 of page 2-5.

The possible solutions to the issue of transit distance include, but are not limited to: 1) extended sortie durations permitted by limited maneuvering 2) extended sorties through additional air refueling requirements 3) greater reliance on FOX/PAXON airspace than is forecast in the March 2012 Draft JPARC EIS.

3. Transit time diminishes "play time", or opportunities to execute training events due primarily to lost fuel efficiencies. Foregoing discussions related to transit distance reveal transit times approaching 30 minutes each way to enter the YUKON airspace, while access to the existing FOX3 MOA via the HOJOE gate/EEEGL TWO SID from JBER requires approximately 15 minutes, with anticipated return legs of similar duration. Contrast the travel distance with an Eielson-based aircraft utilizing the ARUNY ONE departure to enter the DICEMAN Airspace package (EIELSON MOA/ATCAA, FOX1 MOA/ATCAA, FOX2 ATCAA,

G0017

FOX3 MOA/ATCAA as described in the 11th AF Airspace Handbook, 29 Dec 2010). The Eielson aircraft would be in the FOX3 ATCAA in approximately 10 minutes and could reach HOJOE (the southernmost gate in FOX3 and an entry gate for JBER aircraft) in approximately the same time as a JBER-based aircraft of the same make.

4. While transit time to the airspace is a justification for expansion of the FOX3 MOA and creation of the PAXON MOA as outlined in the Draft JPARC EIS, transit time is only part of the efficiency equation. Traditionally, and unless revised once the airspace is expanded, the air combat (ACBT) for Large Force Exercises (LFEs) occurs in airspace centered slightly north of Eielson. The expectation of realized efficiencies is seemingly blind to the utilization patterns of the airspace by participants both north and south of the Alaska Range.

Environmental Study:

1. Table 4-2 summarizes a variety of environmental research related to prior DoD actions including relocation or initial beddown of Air Force aircraft. An accepted precedent exists for environmental research limited to an Environmental Assessment (EA) in conjunction with aircraft relocation. Included in the table are the relocation of the 176th Wing from Kulis ANGB to JBER AFB (20 aircraft), F-22A beddown at JBER (including construction of support facilities), C-17 initial beddown at JBER (replacing C-130s), and the F-22A plus up (replacement of F-15s). Every instance cited, with the exception of the Kulis relocation, involved replacement of some or all aircraft, with minimal changes in overall assigned aircraft with similar mission capabilities/sets. The Kulis relocation is most disruptive to the movement toward an EIS requirement for the Aggressor relocation since it involved moving 20 aircraft, construction, renovation and reassignment of personnel. However, the Kulis relocation did not alter airspace utilization on the broader scale considering the relocated aircraft remained in the same terminal area (the Anchorage local air traffic area).
2. Chapter 4, *Cumulative Impacts and Secondary Effects*, paragraph 4.8.1, page 4-19, lines 25-34 expressly states, "Any future basing of a new aircraft type in Alaska, or the relocation of F-16s from Eielson AFB to JBER, as is now being considered, would require that the appropriate environmental impact analysis processes be completed to include the potential impacts of such actions on all military and civil aviation airspace uses." Furthermore, the primary justification for the expansions of the FOX3 airspace and creation of the PAXON MOA is centralization of training airspace for the Aggressors and JBER based aircraft (paragraphs 1.5.1.1 and 1.5.1.2, Table 1-3 and page 2-2, lines 5-10,15).
3. The relocation of the Aggressors not only requires its own assessment of environmental effects, but consideration of the alternative substantially changes the character of the Draft JPARC EIS. As cited in the previous paragraph, the Draft EIS assumes the F-16s operate from Eielson. Justifications for airspace expansion, including utilization rates and efficiencies are predicated on Aggressors originating and recovering to Eielson. No mention of F-16 relocation exists in the Draft JPARC EIS with the exception of the requirement for additional study should such a relocation occur.
4. The Draft JPARC EIS predicates its MOA/ATCAA usage on status quo basing for JBER and Eielson. Appendix D to the Draft JPARC EIS, Table D-2, *Description and Representative Annual Use of Alaska Training Airspace*, reflects FOX3 sortie totals of 9,877. STONY

G0017

ATCAA reflects 2,500 and the YUKON1/2 ATCAA show 8,034 and 7,076 respectively. Table 2-2 on page 2-5 of the Draft EIS reflects a new estimated usage of the FOX3/PAXON airspace under the proposed changes of 11,237 per year. The assumptions reflect a relocation of prior STONY missions but no relocation of the over 8,000 sorties in the YUKON airspace to the north. While approximately 3,600 of the FOX3 sorties were F-16s (not including F-16CJs) in 2010 according to Table 2-3, similar numbers for the YUKON airspace are not available. Assuming a similar ratio in the north, an additional 2,400 F-16 sorties may either lose training effectiveness or require relocation to the southern airspaces. Additionally, skewing the results are the over 2,700 F-22A sorties in the FOX3 airspace since these aircraft rarely access the YUKON airspace.

5. According to Appendix D, Table D-2, the YUKON1/2 airspace is actively utilized 163 days and 104 days annually, respectively. The FOX3 airspace is utilized approximately 211 days annually. As detailed in the previous paragraph, the Draft JPARC EIS does not consider the shift in sorties associated with the relocation of the F-16s.
6. As detailed on page 2-6, the PAXON MOA low sector (below 14,000' MSL) would only be available for Major Flying Exercises (MFEs) for up to 60 days annually, consisting of 6, ten-day windows. This is of interest primarily to air-to-ground assets and has limited applicability to the Aggressors as they complete their training sorties. It may, however, continue to force other participants in non-MFE training events to utilize Interior ranges. The Aggressors, in their efforts to penetrate defensive air sovereignty assets to eliminate adversary combat air support (CAS), will continue to operate in the airspace centered over Eielson AFB.

Cost savings:

1. As discussed previously, the additional transit time/distance will erode cost benefits that may be claimed through relocation of the Aggressors to JBER. The accounting methods associated with determining cost savings are incongruous at times. The arguments related to cost savings seldom consider the quality of the flight time for the cost expended. Flight hours are allocated to units to complete their required training events to maintain a combat ready or mission ready status. The flight hour totals may remain unchanged or even diminish due to constrained budgets. This constraint will demand more training/proficiency events per flight hour expended. Virtually no recurrent training requirements for Air Force pilots are accomplished during en route cruise flight. To combat this loss of training time due to fuel/flight hours expended in transit, fighter aircraft require additional fuel to expend during high performance maneuvers in the reserved airspace. The unrecognized/hidden cost is the air refueling sorties generated to meet the fighter training requirement. While it is true that air refueling aircrews also require recurrency training, the potential volume of additional refueling sorties required may exceed the maximum training events required by air refueling assets and detract from other aircrew training by demanding extended loiter times and larger offloads.
2. The center points of the PAXON and FOX3 ATCAAs, as currently published, are closer to Eielson than JBER. The center point of the PAXON ATCAA is 106NM from Eielson via the HAWGG departure to the SLICK gate. The same point is 179NM via the EEEGL TWO departure, HOJOE gate in FOX3, then direct to the PAXON center point. The center point

G0017

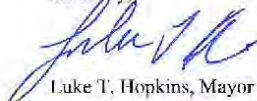

of the FOX3 ATCAA is 100NM from Eielson via the ARUNY ONE departure transiting through the EIELSON MOA and the FOX1 ATCAA/MOA. The same point is 153NM from JBER via the EEEGL TWO departure and HOJOE gate.

One should note the air combat for MFEs occurs in an area centered over Eielson and its aircraft can be in the airspace within a couple minutes of departure.

3. According to the FAA Administrator's Factbook, March 2011, Anchorage TRACON (Terminal Radar Control) ranked 36th busiest nationwide in calendar year 2009 with over 261,000 aircraft operations. CY2010 reported over 277,000 operations according to the Administrator (pg. 14). Fairbanks TRSA (Terminal Radar Service Area) is not listed in the report. However, according to the Alaska DOT website and the FAA data sheet for Fairbanks International Airport, Fairbanks experienced over 133,000 aircraft operations in CY2009. The congested nature of the Anchorage airspace in contrast to the relatively unencumbered access to the ranges enjoyed by Interior aircraft bears further research. A deeper analysis may reveal appreciable minutes of time lost due to required spacing for IFR aircraft and deconfliction in the Anchorage terminal area in contrast to the ease of recovery to Eielson AFB.
4. Weather considerations plague both locations. Eielson suffers from the bitter cold of winter while Anchorage experiences strong winds and occasional IFR conditions. Aircraft operating in the JPARC require fuel reserves – greater reserves for IFR terminal weather – and subsequently lose training time. Due to the distances discussed previously, JBER aircraft will lose even more of the already reduced play time when the requirement to carry fuel for an alternate field exists.

Thank you for the opportunity to offer comment on the *Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska*. The FNSB looks forward to continuing our productive relationship with Alaska Command, the U.S. Air Force, and the U.S. Army. The FNSB point of contact for this action is Jeff Jacobson, Chief of Staff, jjacobson@fnsb.us 907-459-1300.

Sincerely,

Luke T. Hopkins, Mayor

Re: *JPARC Modernization & Enhancement Draft EIS*

To whom it may concern,

Thank you for the opportunity to comment on the *Joint Pacific Alaska Range Complex (JPARC) Modernization & Enhancement Draft Environmental Impact Statement (DEIS)*. The Alaska Department of Transportation and Public Facilities' (DOT&PF) mission is to *Get Alaska Moving* through service and infrastructure. We do this by providing for the safe and efficient movement of people and goods and delivery of state services. In this regard we will comment on safe access and the potential impacts on aviation by the proposed actions. Other State of Alaska departments are providing comments on various aspects of the DEIS that fall within their purview. It is in this context that I provide comments to you on the JPARC DEIS.

Alaska and the military have a long and mutually beneficial history, and the State of Alaska wants to preserve and expand our relationship wherever possible. Alaska's unique and spacious environment already provides superb military training opportunities and we support and endorse modernization and enhancement of this unique capability to support the Department of Defense (DoD) for the next century. It is in Alaska's best interest to seek creative methods to share the combination of air, ground, and sea resources that provide a realistic training environment for the military. While we desire to be both a gracious host and a partner with the military in Alaska, we have concerns about some of the proposed actions in the JPARC DEIS that must be addressed in the National Environmental Policy Act (NEPA) process.

Importance of Aviation in Alaska

We like to say that in Alaska, the general-aviation small aircraft is the equivalent to the mini-van for people living in the contiguous 48 states. There are over 10,000 aircraft in Alaska and over six times as many pilots per capita when compared to the rest of the U.S.A. Furthermore aviation is a major

"Get Alaska Moving through service and infrastructure"

G0018

07/09/2012 18:23 3072690489

AK DOT&PF, AVIATION

PAGE 02/03

economic force by contributing more than \$3.5 billion annually to our economy, or about 8% of gross state product. Aviation is the fifth largest employment sector in Alaska, with over 47,000 aviation related jobs. Perhaps most importantly, aviation is the essential means of access to rural Alaska because of our expansive geography.

Safe Access

Providing for the safe transportation of the flying public in Alaska is a very important part of the State's responsibility. We want to help create a culture of safe travel in Alaska. The number of aircraft mid-air collisions is disturbingly high, which we want to eliminate or at least reduce the potential causes of whenever possible.

We believe it would be beneficial for the DoD to articulate and explain the on-board sensing capability possessed by military aircraft, as well as help Alaska stakeholders understand the relative frequency of military operations below 5,000 feet agl. These explanations should go a long way towards addressing concerns of Alaska general aviation and commercial operators.

These explanations are especially important due to the need for access to the southern Alaska Range, Denali Highway, and Talkeetna Mountains. Furthermore Isabel Pass is a major VFR "highway in the sky" that connects the northern half with the south central and southeastern portions of Alaska. The proposal to establish restricted air space over the Battle Area Complex (BAX) southeast of Delta Junction is of notable concern to state stakeholders as well. The concept of "turn on/turn off" airspace has been articulated by the DoD in past discussions. How might this concept apply to the BAX restricted airspace?

Enhance Communications for Safety

DoD created the Special Use Airspace Information Service (SUAIS) in the mid-1990's to address deconfliction of air space use. SUAIS greatly reduced the potential for mid-air collisions between civil and military aircraft. While both civil and military organizations generally agree upon the value SUAIS provides for deconflicting aircraft, to date aviation organizations continue to ask for adequate VHF radio coverage in the eastern portions of the existing JPARC complex. Correspondingly, the complaints that are received from civil aviation pilots are normally in regions of the airspace that lack adequate communication.

Any expansion of MOA airspace should have accompanying radio coverage, staffing, and other elements of the SUAIS infrastructure to allow civil pilots to communicate with US Air Force Range Control during times the MOAs area active. It is also important that the audio recorded message, broadcast during hours when Range Control is unmanned, be more uniformly broadcast across the JPARC complex.

Unmanned Aerial Vehicles

We provided comments for the scoping phase of the JPARC EIS regarding Unmanned Aerial Vehicles (UAVs), and want to reiterate our concerns. UAVs clearly represent an important and growing technology for the military and other agencies. We think now is the time to address how UAVs might be employed in a training environment while simultaneously ensuring safe separation from traditional aircraft. We believe an Alaska-as-prototype methodology is possible in meeting the challenge if all stakeholders work together to achieve the best approach. We look forward to participating with Department of Defense (DoD) planners in this area. The University of Alaska is working to secure a

G0018

07/09/2012 18:23 9872698489

AK DOT&PF, AVIATION

PAGE 03/03

UAV training area under the auspices of the FAA. Perhaps DoD and the University of Alaska could work together to improve UAV safety.

Conclusion

Alaska has a long, productive, and collaborative history with the U.S. military. We want to build upon our history and continue to provide the remarkable environment for realistic military training opportunities so that our military can continue to be the best trained forces in the world. It is in both Alaska's and DoD's best interests to seek cooperative solutions to be able to share the unique combination of air, ground, and sea resources found in Alaska in a safe and mutually beneficial way.

The State of Alaska wants to continue to be both a gracious host and a full partner with the DoD in Alaska; however we have concerns and needs that must be addressed in the EIS and Record of Decision. I believe we can meet both the military's need for realistic training while ensuring that Alaskans continue to have reliably safe access to the areas within the proposed expanded MOAs.

Sincerely,

Steven D. Hatter
Deputy Commissioner - Aviation

Re: Joint Pacific Alaska Range Complex
Modernization and Enhancement
Draft Environmental Impact Statement
Comments of City of Delta Junction, Alaska
Our File No. 11025.020

Gentlemen:

We are city attorneys for the City of Delta Junction, Alaska. We submit these comments to the *Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska* ("JPARC DEIS"). The comments submitted here are in addition to the City's claims for breach of the Memorandum of Agreement USARAK-MOA-029 of May 16, 2006 ("the 2006 Agreement"). Neither these comments nor the City's participation in the JPARC DEIS process is a waiver by the City of those breaches.

The City believes that the context for its comments is critical and will provide background. The U.S. Army has admitted that changes in staffing at the U.S. Army have cost the Army its historical context.

I. BACKGROUND

The City of Delta Junction ("Delta") is a general law city located immediately to the north of the Donnelly Training Area East and Ft. Greely. The surrounding area along the Richardson Highway and the Alaska Highway, outside of Delta, is home to several thousand additional citizens ("Deltana").

G0019

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 2 of 12

Beginning in 2001, United States Army Alaska ("USARAK") sought to develop two training facilities in the Eddy Drop Zone of the Donnelly Training Area East, the Combined Arms Collective Training Facility ("CACTF") and the Battle Area Complex ("BAX"). The proposed location for the CACTF and BAX was immediately adjoining the southern city limits of Delta and a considerable stretch of Deltana along the Alaska Highway. Through a series of disputes in the context of the National Environmental Policy Act, Delta objected to and resisted the location of the CACTF and BAX so close to populated areas. Some of the history of those objections and the background to their resolution are described in Delta Ordinance 2006-06 ("the 2006 Ordinance"), attached as Exhibit A, and Memorandum of Agreement USARAK-MOA-029 of May 16, 2006 ("the 2006 Agreement"), attached as Exhibit B. More detailed discussion and analyses can be found in the City's comments to the various environmental impact documents, the pleadings filed in federal court and the working papers leading to the 2006 Agreement.

The City argued strongly for an alternate location for the CACTF and BAX, at the south end of the Donnelly Drop Zone, described as "Alternative 3" in the Supplemental Draft Environmental Impact Statement for the Construction and the operation of a Battle Area Complex and a Combined Arms Collective Training Facility within U.S. Army Training Lands in Alaska dated March 2006 ("the 2006 SDEIS").¹ USARAK objected to Alternative 3 because of added costs of construction, as detailed in the 2006 SDEIS. USARAK insisted on Alternative 2 in the 2006 SDEIS, the "preferred alternative," which adjoins Delta and Deltana.²

An agreement was reached: Delta would withdraw its objections to Alternative 2 in exchange for commitments from USARAK for public safety, and USARAK's agreement that use of the CACTF and BAX would not be further expanded without the consent of Delta. The agreement was reduced to the writing attached as Exhibit B, and approved by the City under Ordinance 2006-06, attached as Exhibit A.

Note that to interpret the 2006 Agreement you must have at hand both Exhibit A to the 2006 Agreement and the 2006 SDEIS itself, which both the 2006 Agreement and Exhibit A to the 2006 Agreement reference.

¹ 2006 SDEIS, Vol. 2, Figure 2.f.

² 2006 SDEIS, Vol. 2, Figure 2.e.

G0019

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 3 of 12

Much of the activity described in the JPARC DEIS is removed from the Delta and Deltana area, although the JPARC DEIS is vague about many of the impacts. However, many parts of the JPARC DEIS are specific to the Donnelly Training Area and to the BACX and CACTF in particular. Generally, Delta's comments to the JPARC DEIS go to the environmental impacts on the Donnelly Training Area East. To the extent that other aspects of the JPARC Modernization and Enhancement carry the potential to impact Delta and Deltana, those comments are intended to extent to those changes as well.

II. COMMENTS

A. Comments Related to Memorandum of Agreement USARAK-MOA-029.

It is very frustrating to Delta to have to discuss and review all of these issues again.

1. The JPARC DEIS Is Defective Because JPARC Failed to Consult with Delta As a Local Government Impacted by the Proposed Activity.

As the JPARC DEIS acknowledges, consultation with local governments impacted or potentially impacted by the proposed activities is mandatory.³ That simply did not happen. Indeed, Delta did not even make the distribution list for local agencies impacted.⁴ Given the troubled history of range expansion between USARAK and Delta, the omission is inexcusable. Delta and Deltana are the areas most likely to be impacted by increased activities in the Donnelly Training Area. The failure to contact and consult with Delta is an astonishing oversight.

Delta has litigated the adequacy of NEPA documents with USARAK. Delta has vigorously participated in NEPA proceedings on the 2001 Environmental Assessment for the CACTF and BAX, forcing USARAK to a full environmental impact statement process. Delta's comments to the Draft Environmental Impact Statement for the CACTF and BAX contributed to USARAK's decision to issue a Supplemental EIS. Delta, without question, is the municipality with the most at stake in any expansion of activities in the Donnelly Training Range.

The failure to consult with a major stakeholder, with a record of active participation in prior range expansions, makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

³ JPARC DEIS, Vol. 1, p. 1-33.

⁴ JPARC DEIS, Vol. 2, p. A-45.

G0019

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 4 of 12

2. The JPARC DEIS Is Defective Because JPARC Failed to Discuss the 2006 Agreement.

At no point in the JPARC DEIS that we can find does JPARC even mention the specific terms of the 2006 Agreement.⁵ The omission is astonishing, because city council member Pete Hallgren handed a copy of the 2006 Agreement to JPARC at a scoping meeting. JPARC had actual notice of the existence of the 2006 Agreement, quite apart from USARAK being a party to it.

Yet JPARC failed to acknowledge the consequences of the 2006 Agreement, let alone discuss the impact of the commitments made in that agreement to Delta and Deltana. Because of that omission, substantial portions of the discussion of proposed changes to the BAX in the JPARC DEIS ignore the contractual commitments made in the 2006 Agreement.⁶ Among other issues, the proposed level of increased activities ignores the restrictions on training under specific weather conditions because of fire hazards, ignores known flood plain risks and ignores restrictions and limitations on noise and training activities.

This omission is separate from the breaches of the 2006 Agreement. The 2006 Agreement is a part of the scope of the proposed range enhancements. It is an issue to be addressed as a part of any environmental impact statement. The omission of the 2006 Agreement from the JPARC DEIS makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

⁵ The JPARC DEIS briefly acknowledges the existence of the 2006 Agreement; JPARC DEIS p. 3-206, lines 31-33. The reference cites to the wrong USARAK number. Nowhere in the hundreds of pages of the JPARC DEIS are the terms of the 2006 Agreement discussed, or analyzed in relation to the JPARC DEIS.

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 5 of 12

B. Comments Relating to Fire Danger.

As Delta demonstrated in the negotiations and litigation over the BAX and CACTF Ranges, the risks associated with wildfire are a critical concern. Very strong winds gust through the Black Rapids Canyon, Deltana and Delta routinely. Hot, dry conditions can extend for weeks at a time. A wildfire in those conditions is uncontrollable. Delta experienced just such a wildfire in 1999, when a wind-driven fire originating in the Donnelly Training Area East burned buildings on Ft. Greely and blew hot cinders several miles downwind. Uncontrollable wildfire originating from training activities is a critical concern.

The presence of unexploded ordinance in portions of Donnelly Training Area East exacerbates the dangers from wildfire in training areas. Where a danger of unexploded ordinance is present, ground crews cannot be used to attempt to control the wildfire. Only aerial systems (air drops of water and fire retardant) can be used. Thus, efforts to control wildfire may be further hampered.

The importance of those concerns is reflected in the 2006 Agreement. Substantial portions of that agreement address mitigating the risk of wildfire and providing for immediate, on-site control if a fire is started. The mitigation and control requirements demonstrate the significance both USARAK and Delta attach to this risk.⁷

Note that under extreme fire conditions, no training would occur at the BAX except for troops scheduled for immediate deployment and then only after prior consultation with Delta.⁸ For lower levels of fire conditions, specific levels of staffing and staffing locations are provided.

By contrast, the discussion of fire danger associated with the proposed JPARC Range Enhancement is incomplete and inadequate. The only consideration given to wildfire is fires ignited by munitions and incendiaries, and even that inadequate discussion is cast as nearly meaningless generalities.⁹ Wildfires can also be ignited by careless smoking, exhaust manifolds on vehicles, escaped campfires and many other sources. The failure to address other man-made causes

⁷ See 2006 Agreement, pp. 3.4.

of wildfire makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

The proposal to increase training activities from 106 days annually to 238 days annually¹⁰ is effectively an impossibility without violating the 2006 Agreement or greatly increasing training activities during the harsh Interior Alaska winter. A 225% increase is not feasible.

Because wildfire is uncontrollable in high and extreme weather conditions, and because those kinds of weather conditions prevail in the Donnelly Training Area for days and sometimes weeks at a time, the goals of the BAX Range Expansion cannot be met without extremely high jeopardy of wildfire. The failure of the JPARC DEIS to address these environmental realities makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

Delta notes that the solution to the wildfire risk is not to offer more staffing or more equipment, or even more removal of vegetation. Under high and extreme fire conditions, wildfire is uncontrollable. The only means of "controlling" wildfire risk in high and extreme conditions is to sharply curtail human activity in the Donnelly Training Area. That single solution is contradicted by the overly ambitious training days goal described in the JPARC DEIS. The failure by the JPARC DEIS to directly address that contradiction makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

C. Comments Relating to Flooding.

As Delta demonstrated from historical records and from the work of an independent hydrologist, the area where USARAK chose to locate the BAX and CACTF are prone to sheet flooding and aufeis-generated seasonal flooding. Those risks were addressed in the 2006 Agreement and Exhibit A to the Memorandum.¹¹

"Sheet flooding" is an unusual condition that occurs in the Donnelly Training Area East in which instead of channelized flow, water flows over the entire area. Man-made structures disrupt and channelize that sheet flow, creating very serious downstream risks. Delta, and the Deltana region, are downstream.

¹⁰ JPARC DEIS, p. 6.

¹¹ 2006 Agreement, p. 4; Exhibit A, pp. 2-3.

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 7 of 12

"Aufeis-generated seasonal flooding" occurs in the Jarvis Creek channel, which flows south to north through the Donnelly Training Area East. The risk is mentioned but not assessed in the JPARC DEIS.¹² In the Executive Summary, the JPARC DEIS ultimately concluded that the BAX will have no adverse impact on the flood plain.¹³ That unsupported claim stands in sharp contrast to events on the ground. In the spring of 2006, an aufeis event occurred on Army land, that caused a massive diversion of spring runoff from Jarvis Creek, overland through the BAX site and then more than 10 miles through the Delta and Deltana area north to ultimately discharge into the Tanana River. This rapidly rising floodwater ran down the street in front of the Delta High School as volunteer crews using heavy equipment dug emergency ditching to keep the water from flowing into residential neighborhoods and downtown Delta, while miles to the north State of Alaska Department of Transportation deliberately breached Tanana Loop Extension road in several places to allow the floodwater to more quickly drain into the Tanana River. A number of residents were stranded for several days in their homes due to this action. Anything that alters the topography in Donnelly Training Area East, including the range expansions contemplated by the JPARC DEIS, carries the risk of worsening the risk of aufeis-generated flooding, disruption of the sheet flow flooding or both.

USARAK acknowledged these risks and partially addressed them in the 2006 Agreement.¹⁴ The unspecified enhancements to the BAX contemplated by the JPARC DEIS involve a careful assessment of what changes will be made to the Jarvis Creek channel, the alternate flood channel and the areas prone to sheet flooding. The failure of the JPARC DEIS to meaningfully discuss these risks makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

In the case of both sheet flow and aufeis-generated flooding, it is important that vegetation remain in place to slow and impound the velocity of the water. Delta notes that this important requirement is inconsistent with removal of that vegetation to manage the risk of wildfire. The failure of the JPARC DEIS to address this inconsistency makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

Because the area in which the BAX is located is in a known flood plain, Executive Order 11988 bars construction unless there is no

¹² JPARC DEIS, §3.3.6.1 at p. 3-195.

¹³ JPARC DEIS, vol. 1, p. 12, Table ES-1.

¹⁴ 2006 Agreement, p. 4.

Page 8 of 12

practicable alternative. A word search of the JPARC DEIS demonstrates that Executive Order 11988 is never mentioned in the discussion of the BAX, and only briefly acknowledged to exist in Volume 2 of the JPARC DEIS.¹⁵ There is no discussion of the relationship of Executive Order 11988 to the proposed BAX range expansions. The failure by the JPARC DEIS to meaningfully discuss the risks of construction in a floodplain and the impact of EO 11988 makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

Aufeis occurs throughout the flatter areas in Donnelly Training Area East. As Delta has demonstrated previously, any structures that impede the flow of water, even relatively small amounts of water, create potential for aufeis formation during the winter. Over the course of the long Alaska winter, that aufeis can thicken into layers many feet thick. That aufeis not only jeopardizes whatever structures may have been created; it also impacts the flow of water during spring runoff in unpredictable ways.

The JPARC DEIS baldly claims that the BAX range expansions will have no adverse impact on water resources or flood plains.¹⁶ The assertion is simply wrong. These cumulative risks identified by Delta as far back as 2005 demonstrate that there are very serious hydrologic risks. These are risks, which USARAK acknowledged to exist in the 2006 Agreement. For the JPARC DEIS to claim otherwise now makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

D. Comments Relating to Public Safety.

The Donnelly Training Area East directly abuts the southern boundary of Delta and, along the Richardson and Alaska Highways, the Deltana region. Delta and Deltana will bear significantly increased safety risks from the proposed range enhancements. The risks go beyond the wildfire and flood risks described earlier in this letter. The increased overflights, increased air-to-ground and ground-to-air weapon activity, increased unmanned aerial vehicle activity and increased night training all pose safety risks for Delta and Deltana.

¹⁵ JPARC DEIS, Vol. 2, p. B-48. This omission is particularly frustrating to Delta. In 2005-2006, in the discussions regarding the adequacy of the Supplemental Draft Environmental Impact Statements, it was Delta that had to point out the existence of Executive Order 11988 to USARAK. It is frustrating, even alarming, that JPARC has apparently already forgotten its existence.

¹⁶ JPARC DEIS, §3.3.6 at p. 3-195.

G0019

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 9 of 12

Yet Delta was not meaningfully consulted. And to the extent that Delta participated in the scoping meetings, by providing a copy of the 2006 Agreement, for example, it was simply ignored. The failure by the task force charged with drafting the JPARC DEIS to even consult with Delta makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

The JPARC DEIS acknowledges that existing activities generate munitions-related rubble in the BAX.¹⁷ Munitions-related rubble contains hazardous materials. The JPARC DEIS concludes that there will be no increased adverse impact. Delta is at a loss to understand how a proposed 225% increase in training activities can fail to substantially increase the amount of munitions-related rubble. That rubble, apparently, is stored on the Donnelly Training Area, at or near the BAX. As such, it presents a risk to Delta in the event of a flood event, to give just one example. Unless JPARC can show that Delta's assumptions are in error, the failure by the JPARC DEIS to address this issue makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

Finally, it is deeply troubling to Delta that JPARC is using the location of the CACTF and the BAX as a basis for increased air activity over inhabited areas. As described earlier in this letter, the basis for Delta's entry into the 2006 Agreement was the agreement that in exchange for acquiescing in the BAX and the CACTF being at the north end of the Donnelly Training Area East, as opposed to the south end favored by the City, the use of those ranges would not be expanded without the agreement of Delta. The failure by the JPARC DEIS to meaningfully discuss the breach of that bargain and the increased risk to Delta and Deltana makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

E. Comments Relating to Noise.

The importance of noise and noise management is evident in the 2006 Agreement: the agreement was predicated on a demonstration of the noise from a 105mm Stryker Mobile Gun System immediately prior to the public hearing on the ordinance to adopt the 2006 Agreement. Additionally, the JPARC DEIS concluded that there is a potential adverse impact

As Delta understands the JPARC DEIS, the BAX range expansion contemplates a 225% increase in training days, greatly increased amounts of fixed and rotary wing air traffic, some of it jet traffic,

¹⁷ JPARC DEIS, §3.3.7 at pp. 3-196 to 3-197.

G0019

City of Delta Junction Comments
 JPARC DEIS
 July 6, 2012
 Page 10 of 12

immediately above and along the southerly boundary of Delta. The hours during which the activity would occur are greatly increased. Night training would be added, creating noise issues into the evening.

This would not be as great an issue if USARAK had agreed to locate the BAX and CACTF at the south end of Donnelly Training Range East. But USARAK insisted on the very northern end, abutting the City limits, and promised noise would not be an issue. Now, apparently, residents of Delta and Deltana can expect helicopter traffic 500 feet overhead at 10 PM two-thirds or more of the year.

The JPARC DEIS admits that the EPA has determined noise levels above 55 dB are annoying to adjoining property owners.¹⁸ Further, the JPARC DEIS recognizes that the noise from the BAX will potentially have an adverse impact on the environment surrounding it.¹⁹ But the JPARC DEIS goes on to assert, without citation to authority, that levels of 65 dB are permissible, even though it means that 12% or more of the population will be highly annoyed.²⁰ The activities described in the JPARC DEIS also represent a substantial increase in noise levels for residents of Delta and Deltana. Under the 2006 Agreement, Delta agreed to tolerate noise below 65 dB.²¹ Now Delta residents are being told to expect noise "that would not be expected to exceed 65 dB."²² Delta knows from experience that changes in phrasing like this are a wedge to much higher activity levels. The proposed increase in tolerated levels of noise is a breach of the 2006 Agreement. No justification is offered for this breach of the 2006 Agreement. The failure by the JPARC DEIS to address the unilateral increase in noise levels and noise duration makes the JPARC DEIS inadequate, incomplete and deficient as a matter of law.

F. Relationship Between City of Delta Junction and U.S. Army.

Delta prides itself on a long, mutually cordial and mutually beneficial relationship with the U.S. Army. Many Delta and Deltana residents are veterans, most of whom were stationed at Ft. Greely during their military careers. Delta values that relationship and does not want to unnecessarily damage it.

G0019

City of Delta Junction Comments
JPARC DEIS
July 6, 2012
Page 11 of 12

Delta is also mindful of the risk that Eielson Air Force Base may be reduced in size, or even realigned, and understands the importance of adequate training facilities and conditions to the continued operation of the Base.

Finally, Delta is mindful of the importance of adequate training to our troops, for their safety and security, and to allow them to perform the missions that may be assigned to them.

Delta took those considerations in mind when it made the settlement described in the 2006 Agreement. Some of the factors that led to Delta's agreement in 2006 were the very considerations described above.

Now, however, in the face of the U.S. Army's apparent abandonment of the 2006 Agreement, it is difficult for Delta to once again make concessions that jeopardize its safety and values. It is deeply troubling that, despite having a copy of the 2006 Agreement provided at the scoping meeting, JPARC chose to completely ignore its existence and the contractual obligations made by USARAK under that agreement. From the point of view of Delta, the U.S. Army has breached and proposes to further breach its agreement with the City.²³

G. Conclusion.

In light of these circumstances, a further issue that the JPARC DEIS should address is how a level of trust and confidence between the U.S. Army and Delta may be restored. Delta would strongly prefer to resolve these issues by compromise and agreement, but is understandably concerned that USARAK, JPARC and the U.S. Army will not abide by whatever agreement might be made. The City of Delta Junction invites the U.S. Air Force and the U.S. Army to suggest ways in which some settlement can be made.

As drafted, Delta believes the DEIS is inadequate as a matter of law. A Supplemental Environmental Impact Statement, with further notice and comment periods, is very likely required. Separately, the City and Delta Junction must resolve the very serious breaches of the

²³ At the public hearing in Delta Junction, the military suggested that because the JPARC DEIS is a joint effort of the Air Force and Army, the 2006 Agreement might not apply. The claim is wrong as a matter of law. Donnelly Training Area East was USARAK land at the date of the 2006 Agreement. Whatever rights the Air Force may have can only derive from those the Army has. Those rights are limited by the 2006 Agreement.

G0019

2006 Agreement. Otherwise, the important objectives of the JPARC DEIS will be delayed, at least as to the BAX modifications, while the NEPA requirements are satisfied, and, at least potentially, an action for breach of the 2006 Agreement ensues. Delta strongly urges meeting to resolve these issues without another five year cycle of environmental and contract litigation.

Sincerely yours.

Sponsored By: Assemblymember Keogh

Amended: 06/28/12

Adopted: 06/28/12

**MATANUSKA-SUSITNA BOROUGH
RESOLUTION SERIAL NO. 12-076**

A RESOLUTION OF THE MATANUSKA-SUSITNA BOROUGH ASSEMBLY PROVIDING PUBLIC COMMENT ON THE MARCH 12, 2012, JOINT PACIFIC ALASKA RANGE COMPLEX ENVIRONMENTAL IMPACT STATEMENT REGARDING THE EXPANSION OF EXISTING MILITARY OPERATING AREAS WITHIN THE MATANUSKA-SUSITNA BOROUGH BOUNDARIES AND ADJACENT AREA, PARTICULARLY THE FOX 3 MILITARY OPERATING AREA AND THE PAXSON MILITARY OPERATING AREA.

WHEREAS, the United States Air Force and United States Army are proposing to modernize, enhance, and expand the Joint Pacific Alaska Range Complex, (JPARC); and

WHEREAS, the Matanuska-Susitna Borough is supportive of the United States military presence in Alaska and recognizes its needs for training; and

WHEREAS, much of the existing Fox 3 Military Operation Area (MOA) is situated within the external boundaries of the Matanuska-Susitna Borough; and

WHEREAS, the United States Air Force and the United States Army are requesting public comment on its a draft Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska; and

WHEREAS, the Matanuska-Susitna Borough is the fastest growing area in the state of Alaska; and

G0020

WHEREAS, the Matanuska-Susitna Borough population is expected to double in the next 20 to 25 years; and

WHEREAS, all the proposed alternatives, except the No Action Alternative, consist of increases in combat flight training exercises within airspace above the Matanuska-Susitna Borough; and

WHEREAS, the proposed Fox 3 MOA and Paxson MOA would expand the existing training airspace southerly, extending to much of the Talkeetna Mountains areas adjacent to the growing communities of Lake Louise, Wasilla, Palmer, Sutton, Chickaloon, and Glacier View; and

WHEREAS, expansion of the existing Fox 3 MOA and Paxson MOA airspace easterly could encompass the community of Lake Louise and the adjacent areas of Lake Susitna, Lake Tyone, and Crosswind Lake; and

WHEREAS, there are approximately 500 private property parcels and 80 year round residents in the greater Lake Louise area; and

WHEREAS, the Lake Louise Community Non-Profit Corporation, that represents property owners and residents of the greater Lake Louise area has expressed its many concerns about noise impacts on the local economy, lifestyle, wildlife, recreational use, aviation, etc., by letter correspondence dated

G0020

February 11, 2011, to the Borough Assembly, and June 2, 2012, to the Alaskan Command; and

WHEREAS, the Talkeetna Community Council has expressed its concerns about civilian aviation safety and the undesired impacts of noise on the tourism industry and wildlife by letter correspondence dated June 4, 2012; and

WHEREAS, many Matanuska-Susitna Borough residents and visitors depend upon the airspace within the proposed expanded airspace, as well as the natural resource rich lands and waters below, for accessing private and public lands via aircraft, for commercial enterprise such as air taxi operations, outfitting, hunter/hiker guiding, operating lodges, operating mines, etc., and for various non-commercial, recreational, and subsistence activities, such as hunting, hiking, food gathering, sightseeing, etc.; and

WHEREAS, there exists an abundance of wildlife resources within the area proposed for expansion; and

WHEREAS, the proposed expansion of the Fox MOA airspace would cover the Nelchina caribou herd calving grounds, all of which is located within the boundaries of the Matanuska-Susitna Borough; and

WHEREAS, the proposed lateral expansion of the current Fox 3 MOA would enlarge the military operating area within Borough boundaries by an estimated 5,500 square miles in Alternative "A"

G0020

and by an estimated 3,500 square miles in Alternative "E;" and

WHEREAS, the United States Air Force, in its August, 1995, "Final Environmental Impact Statement - Alaska Military Operations Areas," and Record of Decision that followed in April, 1997, diminished the Fox MOA by 910 square miles to its present location and dimension due to undesirable impacts of noise; and

WHEREAS, the proposals will expand airspace vertically to include training areas between 500 feet Above Ground Level (AGL) and 18,000 feet above Mean Sea Level (MSL); and

WHEREAS, the United States Air Force, in its August, 1995, "Final Environmental Impact Statement - Alaska Military Operations Areas," and Record of Decision that followed in April, 1997, raised the proposed minimum flight altitude from 3,000 feet AGL to 5,000 feet AGL due to undesirable noise impacts and in order to "preclude the potential for direct over flight of sensitive resources"; and

WHEREAS, proposed lateral and vertical expansions of training airspace would increase the probability of conflict between civilian and military aircraft; and

WHEREAS, the potential for near misses or midair collisions between military and civil aviation within the proposed Fox 3 and Paxson MOA, is significant and will impact general aviation pilots, air taxi pilots, and air charter pilots who use these

G0020

areas for hunting, fishing and other recreational and subsistence activities who travel at low altitudes under Visual Flight Rules (VFR); and

WHEREAS, general aviation, air taxi, and air charter pilots flying under Instrument Flight Rules (IFR) conditions would be prohibited from travel through an active MOA, the Richardson Highway is a major aviation transportation corridor for civil aviation traveling north-south, and IFR air travel will be impacted during military operations in the proposed Paxson MOA where the low sector airspace is proposed to extend from 500 feet AGL up to 14,000 feet MSL; and

WHEREAS, the existing communication system in the northern MOA's, Special Use Airspace Information Service (SUAIS), is vital for pilots to receive real time information on all military airspace uses and for the military to receive real time information on civilian aeronautical activity.

NOW, THEREFORE, BE IT RESOLVED, that the Matanuska-Susitna Borough Assembly prefers the two EIS alternatives with smaller lateral and vertical footprints; either the "No Action Alternative" that maintains the current Fox 3 MOA or "Alternative E" for the Fox 3 and Paxson MOAs because it moves the proposed southern boundary of "Alternative A" 20 nautical miles to the north.

G0020

BE IT FURTHER RESOLVED, that if Alternative E is the selected alternative, an Overflight Avoidance Area be established twenty (20) nautical miles north of the parallel to the southern boundary of Alternative E, with flight altitude minimums of 5,000 feet AGL.

BE IT FURTHER RESOLVED, that the Matanuska-Susitna Borough Assembly opposes lowering the minimum flight training altitude to 500 feet for the Fox 3 MOA and the Paxson MOA due to potential impacts on wildlife, civilian aircraft traffic, and recreational uses.

BE IT FURTHER RESOLVED, that the Air Force conduct all supersonic operations in the Fox and Paxson MOAs at or above 5,000 feet AGL or 12,000' MSL, whichever is higher, to reduce sonic boom intensity and its effects on the surface.

BE IT FURTHER RESOLVED, that the Department of Defense delineate and establish seasonal flight avoidance areas and overflight/operational restrictions over wildlife areas underlying any new or expanded MOAs consistent with the current restrictions identified in the 1997 Alaska MOA EIS.

BE IT FURTHER RESOLVED, that these restrictions would include, but not be limited to, minimum overflight altitudes over wildlife areas, including waterfowl, raptor and other migratory bird nesting/breeding/concentration areas, Dall sheep lambing areas, caribou and moose critical season habitat areas,

G0020

etc., be reviewed, identified and, if necessary, expanded, with the cooperative assistance of the Alaska Department of Fish and Game and the U.S. Fish and Wildlife Service.

BE IT FURTHER RESOLVED, that spatial and temporal management options (time and area restrictions) be evaluated and established to facilitate the public's use of the area and to ensure the sustainability of the area's natural resources; and

BE IT FURTHER RESOLVED, that there be no Major Flying Exercises (MFE) and overflight of popular subsistence areas, hunting areas, campgrounds, and trails (5,000 feet AGL and half-mile lateral distance) during peak use periods between June 27 and July 11, from mid-August through September, and during other important hunting seasons determined by the Alaska Department of Fish and Game.

BE IT FURTHER RESOLVED, that the Department of Defense shall provide detailed maps, aeronautical charts and information to the public, especially in the communities near the Fox 3 and Paxson MOAs, identifying flight corridors, restricted or closure areas, and dates of training use.

BE IT FURTHER RESOLVED, that the Matanuska Susitna Borough Assembly encourages mitigation measures be taken to minimize the impacts on VFR and IFR air traffic in the proposed Fox 3 and Paxson MOAs and urges funds be secured for communication enhancements to SUAIS and expand coverage within the proposed

G0020

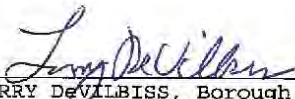

Fox3 and Paxson MOAs prior to the issuance of any airspace.

BE IT FURTHER RESOLVED, should SUA1S not be expanded or become inoperable, the floor of the Fox 3 MOA reverts from 500 feet AGL to 5,000 feet AGL to preserve safety for civil VFR operations.

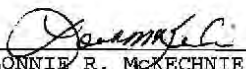

BE IT FURTHER RESOLVED, that the Assembly opposes the establishment of the Paxson MOA between 500 AGL to 14,000 MSL be eliminated due to the importance of the Richardson Highway Corridor.

BE IT FURTHER RESOLVED, that the Assembly opposes any additional Military Operations Areas unless the Federal Aviation Administration and military provide real-time access by IFR aircraft to MOAs to preserve access and safety that are associated with the IFR infrastructure for these parts of Alaska.

ADOPTED by the Matanuska-Susitna Borough Assembly this 28 day of June, 2012.

COMMENTS ON JPARC DRAFT ENVIRONMENTAL IMPACT STATEMENT

Ladies and Gentlemen:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement (DEIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex Alaska (JPARC). The DEIS presents a comprehensive look at the environmental effects of expanding and modernizing JPARC to address technological advances in military equipment and systems, advances in combat tactics and techniques, a continued need for diversified, efficient and realistic training and the need to maximize scarce resources by maximizing joint training in difficult financial times. I have heard from key stakeholders that the DEIS is a high quality environmental document and the DEIS team is to be commended for their efforts.

As the comment period on the DEIS closes my office has not been given the opportunity to review the comments submitted by stakeholders. Accordingly I will reserve judgment on the various alternatives presented by the DEIS at this time. I do believe, however, that the "No Action" alternative should not be adopted. The world class JPARC is a key attribute of Alaska's value to the military in the 21st Century. No place else in America does the military have the opportunity to conduct state of the art training in diverse terrains without risk of encumbrance.

Alaska has been proud to share its lands and airspace with the military for generations. However, it is important for our military leaders to appreciate that this is an earned privilege rather than a right. Military operations must be conducted in harmony with the needs of other uses and users of Alaska's lands and airspace. General aviation is particularly important in Alaska as a means of commerce, subsistence, recreation and emergency transportation. In preparing the Final Environmental Impact Statement (FEIS) every effort should be undertaken to harmonize mission requirements and community needs in order that user conflicts be avoided or mitigated to the maximum extent feasible.

[\[HOME PAGE AND WEB MAIL\]](#)
MURKOWSKI.SENATE.GOV

G0021

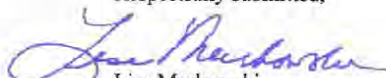

Alaskans stand among the most patriotic people in America and have long been willing to sacrifice personal convenience in order to ensure that our military is the best trained and best equipped fighting force in the world. Alaskans have a long track record of supporting our military families like none other.

For decades the military has proven to be a good partner through its significant year-round contributions to Alaska's economy. In recent months, as the Interior Alaska community has been forced to come to grips with the prospect of a devastating possible downsizing of Eielson Air Force Base, this longstanding trust has been tested.

I fully expect that the people of Alaska will once again rise to support the military's needs in JPARC. However it is also appropriate that the military provide Alaskans with a modicum of certainty that in return our Armed Forces will continue to be good stewards of Alaska's economy.

Over the next few months, as the DEIS team reviews stakeholder comments and formulates a FEIS leading to a Record of Decision the opportunity to rebuild the critical social contract between Alaskans and their Armed Forces presents anew. I sincerely hope that our military leaders take advantage of the upcoming opportunity to expand and modernize JPARC in harmony with Alaska's values and the way of life we hold dear.

Respectfully submitted,

A handwritten signature in blue ink, appearing to read "Lisa Murkowski".

Lisa Murkowski

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506-2101

Ladies and Gentlemen,

Alaska Department of Fish and Game (Department) reviewed the March 2012 Draft Environmental Impact Statement (DEIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC). The Department understands and is supportive of the need of the military to conduct training exercises to prepare personnel for defense missions across the globe.

We appreciate the efforts the military has taken to provide information in the development of this planning process. This is especially important since the area under consideration is one of the most accessible and heavily used areas for outdoor activities in the State. However, we are disappointed that federal law and policy restricts the military's training efforts on the many millions of acres of nearby federally administered National Wildlife Refuges, National Parks and BLM lands and instead forces it onto State lands which are highly desired by the general public for outdoor activities. With this in mind, the comments developed below are intended to accommodate the need of the military to use these State public lands while at the same time maintaining public use and access consistent with the desires of the public and the intent of the Constitution of the State of Alaska.

The following are the comments of the Department.

Coordination

We appreciate the intentions of numerous mitigation measures calling for increased communication and coordination with the Department and members of the public, including subsistence and other resource users. To ensure these meetings take place, we recommend this intent be specifically recognized in the Record of Decision and be scheduled to take place on a biannual basis, or as issue specific items emerge so that adaptive management strategies may be more easily developed to address issues as they develop. This action would ensure that the important discourse between the responsible State managers and various user groups and the representatives of the military take place in a timely manner. This is particularly important as uses by the public alter from year to year, resources change in frequency, abundance and location, and as the uses of the military are better understood as the plan is implemented.

7/9/12

Administrative Activities Conducted by the Alaska Department of Fish and Game

We recognize that minimum over flight of 5,000 ft above ground level (AGL) is proposed as mitigation for many areas with identified populations of fish and wildlife, popular hunting and fishing areas, trails, and campgrounds. The sustainability of the fish and wildlife and the popularity of these areas is dependent on plentiful fish and wildlife that is intensively managed by the Department. Through active management, which includes frequent aerial surveys and other flights, we are able to provide opportunities that drive the popularity of these areas with the public, which includes residents of the two largest cities in Alaska, Anchorage and Fairbanks, as well as the Matanuska-Susitna Borough and North Star Borough and other smaller communities near the affected areas. These surveys entail numerous flight hours and flight days, for example, the Department estimates roughly 400 hours of flight time annually in the Proposed Paxson and Fox 3 MOAs for wildlife surveys alone. Without the ability to conduct comprehensive aerial survey work, we will find it exceedingly difficult, if not nearly impossible, to manage populations of fish and wildlife for sustained yield and maintain the current levels of subsistence and other hunting and fishing opportunities.

To accommodate the Department's need for aerial survey work, we recommend the following mitigating measure:

- Throughout the area covered by this planning process, establish a 5,000 ft above ground level (AGL) over annually identified areas as necessary to accommodate the need of Department staff to conduct aerial survey work. Recognize that flexibility and close coordination with the Department will be necessary to accommodate the conduct of this essential work, while respecting the needs of the military for training. (Additional comments provided below will identify some specific dates of use, and locations that staff consider essential for aerial operations or for the conservation of fish, wildlife and habitat, as well as to provide a separation between military operations and the public, both on the ground and in the air.)

The following mitigation measures are intended to identify specific concerns and actions that can be taken to mitigate them. Please be aware that as our knowledge and understanding of the actions of military exercises increases, alterations may be necessary to reduce impacts to fish, wildlife and the public, or to reduce constraints on the military. To support the development of information related the military's use of the area, we request the JPARC planning process consider additional funding for future studies by the Department to help determine if and how military activities affect fish, wildlife, habitat and public uses. Specific localized knowledge of some uses is limited and additional studies may assist in the development of effective mitigation measures, or allow for additional training opportunities. This is consistent with the language in Chapter 4.8.14, Environmental Justice, which notes the need for additional studies regarding cumulative impacts to "airspace management and use, noise, biological resources, cultural resources, land use, socioeconomics, and subsistence."

Of special note, one aspect of these studies should be to consider if closures of airspace or areas are reducing subsistence opportunities or causing disproportionate effects through displacement of users. While the EIS (4.8.14, page 4-36) notes that disproportionate effects due to access restrictions are not expected for subsistence since access to other subsistence resources is available in the vicinity, it does not evaluate the costs in monetary terms or effort that could be involved by having to focus on those alternate resources, or the problems that may be associated with displacement of users into areas where resources may already be fully

G0022

ALCOM Public Affairs

- 3 -

7/9/12

allocated. For subsistence users, including those on low, fixed incomes, minor alterations in expenditures necessary to access alternate resources may be barriers to realistic participation.

Nelchina Caribou Herd and Moose Calving

Because low level flight operations can drive caribou off their calving and post calving areas, leading to increased calf mortality, we request extending the 5,000 ft AGL from May 15 through July 15 throughout the entire Fox3 MOA. This would reduce stress for a significant portion of the period when the Nelchina Caribou Herd are pre and post calving. Without this mitigation, we would have significant concerns for caribou because of their sensitivity to loud human activities, such as low level jet aircraft, at this early life stage. In addition, a 5000 ft AGL floor will allow for safe conduct of the Departments late May parturition surveys and late June/early July population surveys that are essential to management of this important and heavily utilized caribou herd. These surveys also require a great amount of flexibility in survey timing as they are dependent on favorable conditions to cause caribou to aggregate.

A similar situation exists for moose calving. During the moose calving period of May 15 to July 15, a 5,000 ft AGL will be necessary across the entire Fox 3 and the Proposed Paxson MOAs. Unlike caribou, moose do not have concentrated calving areas and spread out to calve, but are also susceptible to intense, low flying aircraft noise. Twinning surveys and calf mortality and survival studies are also conducted during this period from low-level fixed and rotor-wing aircraft. These surveys cannot be safely conducted with a 500 ft AGL floor to the MOAs.

We recommend the following mitigations to reduce stress on caribou and moose calves from low flying military aircraft during an important life stage.

- Establish a 5,000 ft above ground level (AGL) over annually identified pre and post calving areas for moose and caribou from May 15 to July 15 in the Fox3 MOA and the Proposed Paxson MOA

Delta Caribou Herd

We recommend increasing the height and extending the duration of the minimum over flight altitude to reduce stress on Delta Caribou calves during the important pre and post calving period of their lifecycle. The following modification to this mitigation will also allow for our annual count/census and composition surveys necessary to maintain herd sustainability and provide a popular hunting opportunity.

~~Protect~~ Conserve the Delta caribou herd by establishing a minimum overflight altitude of 35,000 feet AGL over annually identified pre and post calving areas (nominally from May 15 to ~~July~~ June 15).

Talkeetna Dall Sheep

Similar to mitigation provided for Dall sheep in the Delta River Corridor, we request minimum overflight altitudes in the Eastern Talkeetna Mountains for conservation of Dall sheep populations from May 15 to July 15 in the following areas:

- The mountains north and east of Chickaloon River,
- The block of land generally between the Upper Talkeetna River, northeast to Mt. Watana (just west of Lower Kosina Creek),

G0022

ALCOM Public Affairs

- 4 -

7/9/12

- The mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana Creek, and east over to Jay/Coal Creek.

Delta Bison

Proposed actions in the Donnelly Training Area Battle Area Complex Restricted Area (BAX RA) could have an impact on Delta bison movements and behavior, and cause bison to move toward the Delta Agricultural Project area earlier in the year, or discourage them from moving through the BAX RA during migration back to the Delta River in the spring. We recommend that the existing restrictions on disturbance to bison habitat areas under the U.S. Army Garrison Fort Wainwright, Alaska Special Interest Management Area be maintained.

Moose Hunting, Fox 2 and Eielson MOAs: The principal use in the identified ground evacuation areas within Eielson and Fox 2 MOA's is moose hunting, conducted during two general periods of the year – fall and winter. The fall period extends from August 15 to September 25, with the highest use period occurring from September 1 to 15. Hunting during the fall season occurs on every day of the week, including weekends. The winter hunt is primarily conducted during two time frames, early winter (November 15 to December 15), and late winter (January 15 to February 28), and are generally conducted on weekend days when weather conditions permit. The time period between December 15 and January 15 is generally avoided by hunters due to seasonally low temperatures. Hunting access in the fall is generally conducted through ORV trails, rivers, and airstrips and tends to be concentrated near or along these access points. Access in the winter is more dispersed due to snowmobile use. Of the areas affected by the "Definitive Actions", the foothills on the south flank of the Alaska Range are more extensively used than the adjacent low-lying wetlands. This is because the foothills support a diversity of high quality moose habitats and generally have higher densities of moose. Furthermore, the foothills offer vantage points for use by hunters in pursuit of game.

As a mitigating measure, we recommend that low level flights (below 5000 AGL) and ground based use not occur in the Fox 2 or Eielson MOAs during scheduled hunting seasons. Additionally, we request that low level flights not occur during the May 15 to July 15 pre and post calving period for caribou, moose and Dall sheep.

Wildlife Mortalities

Throughout the training areas, we request that all known wildlife mortalities caused by military activities be reported within 72 hours to the Department's Area Wildlife Staff.

Habitat Enhancement and Stream Crossings

If it is determined by the military that, stream crossings, habitat enhancement or alteration in any of the MOAs is a desired mitigation, we request consultation with the responsible Area Wildlife and Habitat Biologists to avoid unintended consequences and to obtain necessary permits. Recommended contacts are the Regional Supervisor's for the Division of Habitat, and Division of Wildlife Conservation based in the Departments Fairbanks area office.

G0022

ALCOM Public Affairs

- 5 -

7/9/12

Bears

Human generated waste products, primarily discarded or improperly stored food, from 1000 troops during field maneuvers could pose a wildlife attractant, particularly to bears. We previously noted that the DEIS did not address management actions to prevent wildlife from becoming habituated to human generated food and its associated negative impacts. A review of the draft document shows that there remains the need for the development of a comprehensive program to educate military personnel on how to manage human waste that may attract bears that could cause them to become habituated to human waste.

New Public Overflight Restriction Area

We appreciate the development of Alternative A. This Alternative does not expand R-2202 to the west or R-2211 to the East, and therefore leaves a popular area for hunting open for the public and for the Department's use on a regular basis. This area is one of the highest utilized hunting areas in GMU 20A (Figure 3-11, Page 3-58). Closing this area through the expansion of restricted areas R-2211 and R-2202 would have created a significant access hardship for the public and the Department.

Harvest of Wildlife for Subsistence and other uses

The discussion in Chapter 3.1.13.1 Impact Assessment Methodology contains confused and incorrect definitions of public lands and Conservation System Units (CSUs), as well as erroneous descriptions and ratings of community dependence on subsistence based on racial criteria.

Federal Public lands are defined in Section 102(3) of ANILCA as "...land situated in Alaska which, after the date of enactment of this Act, are federal lands...". Conservation system units (CSUs) are defined in ANILCA at 102(4) as "...any unit in Alaska of the National Park System, National Wildlife Refuge System, National Wild and Scenic Rivers Systems, National Trails System, National Wilderness Preservation System, or a National Forest Monument..." Because of the legal application of subsistence to federal public lands it is important to properly define these legal terms.

The discussion related to the dependence of subsistence by communities and their ratings is also flawed by the inclusion of the criteria "...whether the communities are predominately Alaska Native." Neither the Alaska Constitution or federal law regarding subsistence in Alaska differentiates subsistence use along racial lines, unless specifically permitted by Congress (re: Marine Mammal Protection Act, Endangered Species Act, etc.). While it is recognized that the Alaskan Native community has a long history of subsistence use, we request that the EIS revise this section to properly include existing State and Federal law regarding subsistence use and participation.

It should also be noted that through interpretation of the Alaska Constitution, under state law, all Alaska residents are considered eligible to conduct subsistence activities where that activity is allowed. The discussion as presented in the referenced section should be recognized as having no bearing on the allocation of fish and wildlife, which is under the purview of the Alaska Boards of Fisheries and Game, and the Federal Subsistence Board.

G0022

ALCOM Public Affairs

- 6 -

7/9/12

Also related to subsistence and other uses,

We appreciate the proposed mitigation to not conduct major flying exercises (MFEs) during the fall hunting season; however, the proposed September prohibition does not encompass all of the most important use periods, when over 5000 hunters and their households rely on this area for subsistence harvest of moose and caribou. Big game hunting in the area for subsistence and general uses begins with the August 10 opening for caribou and reaches a peak during the September 11 to September 20 period. Hunters are also in the field throughout the Proposed Paxson MOA and the Fox 3 MOA during the winter season -- most heavily between October 21 and the end of November, after which use is reduced as caribou migrate from the area and winter weather sets in. The Proposed Paxson MOA and the Fox 3 MOA also constitute the most popular and highly used areas in the state for small game hunting. This hunting occurs year-around with peak activity in August-October and February-March. To encompass these periods, we recommend the following mitigation:

- Conduct no MFEs from August 10 to September 30 and October 21 to November 31 in the Fox 3 MOA and the proposed Paxson MOA, and minimize MFEs during the February-March period to avoid disturbance or displacement of small game hunters.

Safety

The mitigation, *"Notify Alaska press outlets of the annual MFE schedule for release in publications such as the Milepost, visitor and travel guides, and various newspapers"* will help keep the public informed. We recommend development of a specific website devoted to this information, as well as publishing in local outlets such as the Valley Frontiersmen and Delta News (web and hard copy) in addition to the Fairbanks News Miner and Anchorage Daily News, and physically posting notices at public and impromptu access points along the road system. In addition, the DEIS should recognize that hunters, trappers, fisherman, landowners, miners, agency personnel, and other users employ float, ski, and tundra tire equipped aircraft and light helicopters to access these popular and high-use areas. Private airfields (See Appendix D) do not capture the vast number of "off-field" areas used for access with this equipment. Avoidance by military aircraft, as well as SUAIS radio-coverage, must be implemented with recognition of these uses if public safety is to be maintained.

We also recommend that the training schedules with associated area or airspace restrictions be published as early as possible in the calendar year to allow residents, subsistence and recreation visitors to the area to coordinate plans for use of the area. Many hunting and other outdoor use plans are made many months in advance so that this type of information would be useful to visitors and reduce conflicts.

Watana – Susitna hydroelectric Project

The DEIS fails to recognize the Watana-Susitna Hydroelectric Project in the Fox 3 MOA. This major effort includes numerous engineering, wildlife, fisheries and habitat studies that all use small aircraft for access, surveys, aerial radio-telemetry, and mapping that will greatly increase VFR traffic for many years. For example, wildlife studies alone will approximately double the flight hours in the Fox 3 MOA to over 800 hours per year. The study areas for this project compose up to 500 square miles in the existing Fox 3 MOA. While a 5000 ft AGL floor poses little safety concerns, the high level of traffic associated with this project creates serious potential airspace conflicts

G0022

ALCOM Public Affairs

- 7 -

7/9/12

at the lower 500ft AGL floor. Close coordination with the Alaska Energy Authority and associated agencies and contractors will be crucial to maintaining safety.

Civilian Airspace Management

We recommend meetings be scheduled on an annual or biannual basis and include ADFG staff participation. A commitment in the Record of Decision to conduct these meetings on a regularly scheduled basis would assist in ensuring that public input and the development of adaptive management is employed in this high public use area.

Coordinate with the FAA, ADFG, and local civilian aviation interests/stakeholders through the ACMAC, the U.S. Army Alaska Aviation Safety Standard Council, and other such forums to discuss and resolve issues of mutual interest affecting military and civilian airspace uses for existing and new SUA and restricted airspace on an annual or biannual basis.

Major Fighting Exercises (MFEs)

We recognize that expanded MFEs are integral to training needs in the JPARC; however, the September, December, January prohibition against MFEs will not adequately mitigate their affect on caribou and moose calving areas, sheep lambing and rutting areas, and popular hunting seasons. We recommend the following mitigation:

Conduct no MFEs during May 15 to July 15, August 10 to September 30, October 21 to November 31, and December, and January.

Spelling

We recommend a word search be performed to address spelling issues throughout the plan. For example Goodness River should be Goodnews River, and Paxson MOA should be Paxson MOA.

Page Specific Comments

Page 3-71. Hunting. Add ptarmigan to the primary species hunted in the area and revise the document to show that Dall sheep and goat seasons are not short, with the sheep season 40 days long and encompassing other high use seasons. There are no goat seasons within the proposed MOAs (there are few goats within the area).

Page 3-82: line 4. The vast majority of fish and wildlife surveys in the Proposed MOAs are conducted by the Department and not the land management agencies. The statement on line 6 regarding survey timing ("Mostly these occur in late summer/early fall and before the first snow") is incorrect. The routine survey schedule is as follows (surveys marked with asterisks are essential surveys that are conducted every year):

May 15 – June 10: Caribou parturition surveys*; moose twinning*, calf survival and periodic mortality surveys; occasional bear surveys.

June 20 – July 10: Caribou population estimate* and composition surveys*

Mid summer; Dall sheep surveys*

G0022

ALCOM Public Affairs

- 8 -

7/9/12

October 1-10: Caribou composition survey*

Following first adequate snow cover (~mid-October) and before Dec. 7: Moose population estimates*

May 5-June 5: Ptarmigan surveys (aircraft access)

Late March-Early April: Watana Su-Hydro winter range moose surveys* (scheduled for the next several years).

Monitoring of moose and caribou movements via aerial radio-telemetry: Year-around.

Page 3-82: Line 14. We appreciate that the DEIS recognizes the significant impacts of reduced access on livelihoods. It is important to also recognize that most of the Departments wildlife surveys are charter flights flown by small air taxi operators from around the region. Most of these operators also generate revenue from the transport of hunters, fishermen and other recreationists. A reduction in this economic activity could result in reduced availability of local air taxi operators for fish and wildlife surveys and monitoring, hindering the Departments ability to successfully manage fish and wildlife.

Page 3-82: Lines 22-24: It is misleading to state that avoidance of 1 or 3 NM allows access to private and public airports, respectively. Consider that, to avoid military training activities, aircraft will have to operated below 500' AGL enroute to the airport avoidance area. Many pilots will choose to avoid prolonged operation at below 500 ft AGL for safety purposes. Furthermore, mountainous terrain and windy conditions may further preclude safe flight at those low altitudes. These airports, as well as numerous "off-field" landing areas are critical for wildlife survey and animal capture activities. Also consider that "planning around military schedules" will likely have economic effects on aviation related business through reduction in overall activity and the generation of fees.

Page 3-84: Alternative E: Most of the comments above also apply to all action alternatives.

Page 3-97: Line 38. Harvesting subsistence resources is not a certain event. Thus a delays result in lost opportunity.

Page 3-97: Line 41. The stated intent of allowing for administrative survey flights to be conducted with minimal disruption is appreciated. Because of its importance and to ensure that it will be implemented in an agreed to manner, we request that date-specific mitigation efforts and agreements be specifically noted in the ROD for ease of reference.

Page 3-97: Line 43: See comments above for page 3-82, lines 22-24 above

Page 3-99 (Section 3.2.13.4 and elsewhere) Mitigations:

- No MFEs August 10 – September 30 and October 21 – November 30.
- No training activities below 5000 ft AGL to allow for essential wildlife surveys during the following periods:
 - May 15 – June 10
 - June 20 – July 10

G0022

ALCOM Public Affairs

- 9 -

7/9/12

- o October 1-10
- o After first adequate snow cover (~mid-October) and before Dec. 7 (this request will vary from year to year depending on snowfall and can take 5 to 10 days to complete depending on weather conditions. This effort can be coordinated on a seasonal basis.

To improve coordination between the military and local subsistence users, we request the final document commit to scheduling annual or biannual meetings in effected communities to determine and seek solutions to identified issues related to the subsistence use of the area. We request the following changes to this mitigation measure.

The preceding analysis of effects on this resource has identified potential adverse impacts. The following preliminary mitigation is under consideration as possible ways to reduce these impacts.

• *All alternatives:*

Expand consultation efforts with subsistence parties in the affected area on an annual or biannual basis to determine current subsistence use levels and areas on USAG-FWA lands as input into scheduling. Expand tribal consultation efforts with subsistence users about hunting and fishing programs on USAG FWA land. Continue to use a newsletter to provide information to subsistence users about existing and new military activities and the changes in access for subsistence users. Expand research and cooperative studies with Tribes to address possible effects of Air Force and Army activities on subsistence resources both directly within USAG-FWA installation boundaries and those outlying resources that may also be affected by military activities on DTA West, DTA East, YTA, and TFTA.

Appendix I

Page I-2. It appears that several plans in this appendix are outside the area of the plan and we question their inclusion in this plan. For example: Draft Revised Special Use Land Designation for the Togiak National Wildlife Refuge and Lower Goodnews River State DNR Hatcher Pass Planning, Chugach State Park, Nancy Lake State Recreational Area, BLM Bay Proposed Resource Management Plan and Final EIS.

Page I-43. The June 27 to July 11 flight avoidance area along the Delta River is inadequate to conserve Dall sheep lambing and rutting habitat. We recommend the flight avoidance period include May 15 to July 15 for lambing areas, and from November 15 to December 15 over rutting areas. We request annual contact with the Department to ensure these locations have not shifted or need adjustment.

Page I-48. We question the need to include game management units outside the area of the plan. These include GMU 9, 16, 17, and 19.

Appendix G

G0022

ALCOM Public Affairs

- 10 -

7/9/12

Page G-2, No. 9, Caribou - Overflights. Fox1 MOA, Fox2 MOA, and Proposed Paxson MOA should be included in this mitigation. We recommend increasing altitude and extending the minimum duration of the period to conserve the Delta Caribou calves during an important period of their life cycle and ensure their sustainability. The following modification to this mitigation measure will also allow for annual count/census and composition surveys necessary for us to continue to provide a popular hunting opportunity.

~~Protecting~~ Conserving the Delta caribou herd by establishing a minimum overflight altitude of 35,000 feet above ground level (AGL), over calving and post calving areas, in appropriate areas of the Fox1, Fox2, proposed Paxson, Birch, and Eielson MOAs from May 15 to ~~July~~ 15. Annually contact ADF&G to determine specific areas of avoidance.

Page G-2, No. 10 Dall Sheep - Overflights. We recommend adding the proposed Paxson MOA to the list of areas establishing a minimum overflight altitude. This is needed to conserve Dall sheep in the mountainous region north of the Black Rapids. Similar to mitigation provided for Dall sheep in the Delta River Corridor, we request minimum overflight altitudes in the Eastern Talkeetna Mountains for conservation of Dall sheep populations. In particular:

- The mountains north and east of Chickaloon River,
- The block of land generally between the Upper Talkeetna River, northeast to Mt. Watana (just west of Lower Kosina Creek),
- The mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana Creek, and east over to Jay/Coal Creek.

To encompass these concerns, we recommend the following mitigation measure be implemented:

~~Protect~~ Conserve Dall sheep by establishing a minimum overflight altitude of 5,000 feet AGL over lambing areas and spring mineral licks, in appropriate areas of Yukon 1, 2, 3, and 4, Buffalo, Eielson, Paxson, and Fox MOAs (nominally May 15 to July 15), and over rutting areas (nominally from November 15 to December 15). These areas will be identified during annual consultation with ADF&G prior to the May 15 and November 15 dates stated above.

Page G-3, No. 22 Aircraft, Habitat Protection. The document provides a good discussion of this important mitigation measure to protect important wildlife habitat in JPARC; however, to provide a more comprehensive list we request an annual meeting to update it. For example, we recommend adding the Oshetna River caribou calving grounds, Watana Creek caribou calving grounds, and the Eastern Talkeetna Mountains for Dall sheep populations. In particular, the mountains north and east of Chickaloon River, the mountain block between the Upper Talkeetna River northeast to Mt. Watana (west of Lower Kosina Creek), and the mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana, and east over to Jay/Coal Creek. We request the following change to this mitigation.

Avoiding the creation of aircraft noise around the Gulkana and Delta National Wild and Scenic Rivers, Tangle Lakes area, Richardson Highway, and trumpeter swan nesting areas within the Fox MOA eastern boundary. These areas will be updated during annual consultation with ADF&G prior to May 15.

G0022

ALCOM Public Affairs

- 11 -

7/9/12

Appendix K, Mitigation Measures

Page K-11, Biological, 4th Proposed Mitigation. This mitigation measure should also apply to Fox3 MOA and the Proposed Paxson MOA. We also request a start date for this study.

Expand effort to conduct a detailed study to assess the impacts and effects of noise on wildlife, particularly key species, such as caribou and bison during critical life cycle seasons. Use information to include protection requirements within a noise management plan.

Page K-19, Land Use-Recreation. GMU 13 is an important moose and caribou hunting area, likely the most heavily used area in the state due to accessibility of the area to residents from Anchorage, the Matanuska Susitna Borough, and Fairbanks. In 2010, 5,015 individual moose hunters reported hunting in GMU 13, a number that has been steadily increasing since 2002. This increase is partially credited to the current active management programs which the state has invested significant time and energy to increase moose abundance for the benefit of consumptive users. Current objectives for moose are being achieved, with some additional increases planned. The overall management objective is to maintain a high level of harvestable moose with sufficient hunter participation annually to avoid habitat impacts. Caribou hunting is also highly popular with 4,887 hunters reporting hunting this area in 2010, with a peak participation of 19,397 hunters in 1996. As shown by the above discussion, GMU 13 is an important moose and caribou hunting area.

Currently, the EIS only lists Crosswind Lake and the Matanuska Valley Moose Range as hunting areas to avoid. However, the additional areas listed below support intense hunting for moose and caribou on a seasonal basis and should be added to the list. To accommodate this continued and important use, we request the following modifications to the first proposed mitigation measure shown on page K-19

Avoid overflight of popular hunting areas, campgrounds, and trails (5,000 feet AGL and half-mile lateral distance) during peak use periods between June 27 and July 11, ~~and from mid- August 10~~ through September 20, and October 21 to November 30, and other important hunting seasons determined in annual consultation with ADFG. Locations to avoid include:

- *Crosswind Lake, ~~and~~*
- *Matanuska Valley Moose Range,*
- *Denali Highway between Cantwell and Paxson,*
- *Richardson Highway between Gulkana and Black Rapids,*
- *Tak Cutoff (Glenn Highway) between Gakona and Mentasta,*
- *The Gakona/Chistochina River drainages,*
- *Upper Susitna River drainage (above Tyone R),*
- *Brushkana River drainage,*
- *Coal Creek drainage,*
- *Watana Creek drainage,*
- *Upper Nenana River/Wells Creek area,*
- *Lake Louise/Susitna/Tyone Lake system,*
- *MacLaren River drainage,*
- *Tangle Lake system,*
- *Hungry Hollow/Paxson/Summit/Fielding Lake areas,*

G0022

ALCOM Public Affairs

- 12 -

7/9/12

- Swede Lake drainage in Hungry Hollow down to the Alphabet Hills (bordered on the south by the W Fork Gulkana River).
- Gillespie/June/Nita/Dick Lakes along the Richardson Highway south of Paxson.
- Nelchina Public Use Area from the Glenn Highway near Eureka north to the Susitna River.

Page K-21, Land Use – Recreation. The list of areas to avoid currently appears to consist primarily of BLM campgrounds. However, many additional popular trails for hunting and other recreating in the area exist and merit inclusion. Several trails exist up and down the MacLaren River, including the MacLaren Summit Trail to the north, and trails on both sides going generally north, and a trail on the west side going south. Another trail system extends through the Glacier Lake/Sevenmile Lake/MacLaren River, with an additional trail up the West Fork MacLaren River for XX miles. Other known popular trails include:

- Swede Lake Trail,
- Middle Fork Trail (heads west of Meier's Lake),
- Round Top trail which heads east of the Richardson Highway towards Round Top Mtn,
- Haggard Creek Trail,
- Ewan Lake Trails (one from the east and one from the south of the lake),
- Lake Louise/Crosswind Trail,
- Tolsona Lake/Crosswind Trail,
- Butte Lake Trail,
- Coal Creek trail (starts east of Butte Lake),
- Moore's Camp Trail (starts at Mile 51 on Denali Highway goes south over the mountain and down to a MacLaren River crossing),
- Top of the World Trail near Paxson/Black Rapids,
- Chistochina River Trail,
- Mankomen Lake Trail,
- Indian River Trail,
- Slana River Trail.
- There is a huge network of trails all through the Nelchina Public Use Area, dozens, starting with the Eureka/Little Nelchina Trails, north to the Oshetna/Black River/Goose Creek/Busch Creek/Clarence Lake, and east over to the Moore Lake/Grayling Lake/Marie Lake areas west of Lake Louise/Susitna.

To accommodate the use of additional popular trails in the area, we request the following modifications to the fifth proposed mitigation measure shown on page K-21.

Avoid overflight of popular hunting areas, campgrounds, and trails (5,000 feet AGL and half-mile lateral distance) during peak use periods between June 27 and July 11, ~~and from mid-~~ August 10 through September 20, and October 21 to November 30, and other important hunting seasons determined annually with ADFG. Locations to avoid include:

- Brushkana Creek campground,
- Tangle Lakes campground,
- Paxson Lake campground,

G0022

ALCOM Public Affairs

- 13 -

7/9/12

- Clearwater Wayside,
- One Mile Creek/Wolverine Mountain,
- Tangle Lakes trail,
- Gulkana River Raft trail,
- Costner Glacier trail,
- Sourdough campground,
- Lake Louise State Recreation Area,
- MacLaren Summit Trail,
- Glacier Lake/Sevenmile Lake/MacLaren River Trail System,
- West Fork MacLaren River Trail,
- Swede Lake trail,
- Middle Fork Trail,
- Round Top Trail,
- Haggard Creek Trail,
- Ewan Lake Trails,
- Lake Louise/Crosswind Trail,
- Tolsona Lake/Crosswind Trail,
- Butte Lake Trail,
- Coal Creek trail,
- Moore's Camp Trail,
- Top of the World Trail,
- Chistochina River Trail,
- Mankomen Lake Trail,
- Indian River Trail,
- Siana River Trail,
- Nelchina Public Use Area Trail System,
- Eureka/Little Nelchina Trails,
- Oshetna/Black River/Goose Creek/Busch Creek/Clarence Lake Trail,
- Moore Lake/Grayling Lake/Marie Lake Trail,

Page K-24, Subsistence. The period prohibiting MFEs should encompass the period from 10 August – 30 September and 21 October – 31 November, instead of 20 August – September 20. This change will protect the most important subsistence hunting seasons for caribou and moose. We request the following modification,

No MFEs conducted during 10 August – 30 September and 21 October – 31 November ~~20 August – 20 September~~ in Fox 3 and expansion areas and new Paxon MOA. This restriction does not apply to US Army training or testing.

Page K-24, Subsistence. Biannual coordination meetings with the Department to review and determine the efficacy of avoidance areas and flight restrictions are essential to conservation and management activities.

Delineate and establish seasonal flight avoidance areas and overflight/operational restrictions over wildlife and other areas underlying new MOAs consistent with current restrictions identified in the 1997 Alaska MOA EIS. These restrictions would include minimum overflight altitudes over Dall sheep lambing

G0022

ALCOM Public Affairs

- 14 -

7/9/12

areas, spring mineral licks, and limiting overflights of wildlife in critical life periods as determined in coordination with ADFG.

Page K-24, Subsistence. We support modifying the existing Letter of Agreement in the following areas.

Modify existing Letter of Agreement with ADFG to avoid overflight of caribou and moose calving areas, and sheep lambing, mineral licks and rutting areas in Fox 3 expansion areas and new Paxon MOA.

Page K-25, Subsistence. We support these approaches, but request that the final Record of Decision commit to regularly scheduled annual or biannual meetings with the Department to monitor and review issues related to airspace.

Conduct annual or biannual meetings with regulating agencies and with communities dependent on subsistence resources under new airspace with a view to monitor impacts of Air Force activities on subsistence. Information would be used to adjust flight avoidance locations, or to add new ones.

Update the current SUAIS to include information on MOA activation and provide advanced notice of MFES to communities and management agencies that use and access lands underlying the Fox 3 MOA, the Fox 3 expansion areas, and the new Paxon MOA.

Sincerely,

Craig L. Fleener
Deputy Commissioner

Subject: FW: Joint Pacific Alaska Range Complex EIS Comment Submission

On July 9, 2012, the Alaska Department of Fish and Game submitted comments on the March 2012 Draft Environmental Impact Statement (DEIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) (see attached). In reviewing the comments we submitted, it was found that the comment submitted on page 5, regarding the New Public Overflight Restriction Area (R-2202 and R-2211), had important information that was unintentionally omitted. At this time I am requesting that you accept the revised, corrected comment provided in the attached document entitled "12-7-24 ADFG Amended Comment" to replace the previously submitted comment regarding this specific subject. All other comments remain as previously submitted.

If you need additional information, please contact me.

Thank you

Brad Palach

Ladies and Gentlemen

On July 9, 2012, the Alaska Department of Fish and Game submitted comments on the March 2012 Draft Environmental Impact Statement (DEIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC). In reviewing the comments submitted, we determined that the comment on page 5, regarding the New Public Overflight Restriction Area (R-2202 and R-2211), had important information that was unintentionally omitted. At this time I am requesting that you accept the revised, corrected comment provided below in place of the previously submitted comment.

New Public Overflight Restriction Area

Both alternatives A and B considerably expand R-2202 and/or R-2211 into areas of private and public land that receives high public use and is heavily used by the Departments for administrative activities for management and research purposes. The solution is to consider the most recent alternative written into the EIS, called the "North-South Run-In Headings for Inert Ordnance Delivery." This alternative does not expand R-2202 to the west or R-2211 to the East, and therefore leaves that area open for public and Department use on a regular basis. Closing the area between R-2211 and R-2202 would create a significant access hardship for the public and the Department.

To effectively resolve this concern, we request that a new alternative be developed for live ordnance that is similar to the new inert ordnance alternative. It appears that the proposed live ordnance target could be relocated so that the drop area and ground exclusion area would be located entirely within the Donnelly Training Area. This would limit air restrictions and ground exclusion areas exclusively to the Donnelly Training Area, does not expand live ordnance restricted areas R-2202 or R-2211, and would reduce the impact to the public and the Department.

JBER, AK 99506-2101

Ladies and Gentlemen,

Alaska Department of Fish and Game (Department) reviewed the March 2012 Draft Environmental Impact Statement (DEIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC). The Department understands and is supportive of the need of the military to conduct training exercises to prepare personnel for defense missions across the globe.

We appreciate the efforts the military has taken to provide information in the development of this planning process. This is especially important since the area under consideration is one of the most accessible and heavily used areas for outdoor activities in the State. However, we are disappointed that federal law and policy restricts the military's training efforts on the many millions of acres of nearby federally administered National Wildlife Refuges, National Parks and BLM lands and instead forces it onto State lands which are highly desired by the general public for outdoor activities. With this in mind, the comments developed below are intended to accommodate the need of the military to use these State public lands while at the same time maintaining public use and access consistent with the desires of the public and the intent of the Constitution of the State of Alaska.

The following are the comments of the Department.

Coordination

We appreciate the intentions of numerous mitigation measures calling for increased communication and coordination with the Department and members of the public, including subsistence and other resource users. To ensure these meetings take place, we recommend this intent be specifically recognized in the Record of Decision and be scheduled to take place on a biannual basis, or as issue specific items emerge so that adaptive management strategies may be more easily developed to address issues as they develop. This action would ensure that the important discourse between the responsible State managers and various user groups and the representatives of the military take place in a timely manner. This is particularly important as uses by the public alter from year to year, resources change in frequency, abundance and location, and as the uses of the military are better understood as the plan is implemented.

ALCOM Public Affairs

- 2 -

7/9/12

Administrative Activities Conducted by the Alaska Department of Fish and Game

We recognize that minimum over flight of 5,000 ft above ground level (AGL) is proposed as mitigation for many areas with identified populations of fish and wildlife, popular hunting and fishing areas, trails, and campgrounds. The sustainability of the fish and wildlife and the popularity of these areas is dependent on plentiful fish and wildlife that is intensively managed by the Department. Through active management, which includes frequent aerial surveys and other flights, we are able to provide opportunities that drive the popularity of these areas with the public, which includes residents of the two largest cities in Alaska, Anchorage and Fairbanks, as well as the Matanuska-Susitna Borough and North Star Borough and other smaller communities near the affected areas. These surveys entail numerous flight hours and flight days, for example, the Department estimates roughly 400 hours of flight time annually in the Proposed Paxson and Fox 3 MOAs for wildlife surveys alone. Without the ability to conduct comprehensive aerial survey work, we will find it exceedingly difficult, if not nearly impossible, to manage populations of fish and wildlife for sustained yield and maintain the current levels of subsistence and other hunting and fishing opportunities.

To accommodate the Department's need for aerial survey work, we recommend the following mitigating measure:

- Throughout the area covered by this planning process, establish a 5,000 ft above ground level (AGL) over annually identified areas as necessary to accommodate the need of Department staff to conduct aerial survey work. Recognize that flexibility and close coordination with the Department will be necessary to accommodate the conduct of this essential work, while respecting the needs of the military for training. (Additional comments provided below will identify some specific dates of use, and locations that staff consider essential for aerial operations or for the conservation of fish, wildlife and habitat, as well as to provide a separation between military operations and the public, both on the ground and in the air.)

The following mitigation measures are intended to identify specific concerns and actions that can be taken to mitigate them. Please be aware that as our knowledge and understanding of the actions of military exercises increases, alterations may be necessary to reduce impacts to fish, wildlife and the public, or to reduce constraints on the military. To support the development of information related the military's use of the area, we request the JPARC planning process consider additional funding for future studies by the Department to help determine if and how military activities affect fish, wildlife, habitat and public uses. Specific localized knowledge of some uses is limited and additional studies may assist in the development of effective mitigation measures, or allow for additional training opportunities. This is consistent with the language in Chapter 4.8.14, Environmental Justice, which notes the need for additional studies regarding cumulative impacts to "airspace management and use, noise, biological resources, cultural resources, land use, socioeconomic, and subsistence."

Of special note, one aspect of these studies should be to consider if closures of airspace or areas are reducing subsistence opportunities or causing disproportionate effects through displacement of users. While the EIS (4.8.14, page 4-36) notes that disproportionate effects due to access restrictions are not expected for subsistence since access to other subsistence resources is available in the vicinity, it does not evaluate the costs in monetary terms or effort that could be involved by having to focus on those alternate resources, or the problems that may be associated with displacement of users into areas where resources may already be fully

G0022

ALCOM Public Affairs

- 3 -

7/9/12

allocated. For subsistence users, including those on low, fixed incomes, minor alterations in expenditures necessary to access alternate resources may be barriers to realistic participation.

Nelchina Caribou Herd and Moose Calving

Because low level flight operations can drive caribou off their calving and post calving areas, leading to increased calf mortality, we request extending the 5,000 ft AGL from May 15 through July 15 throughout the entire Fox3 MOA. This would reduce stress for a significant portion of the period when the Nelchina Caribou Herd are pre and post calving. Without this mitigation, we would have significant concerns for caribou because of their sensitivity to loud human activities, such as low level jet aircraft, at this early life stage. In addition, a 5000 ft AGL floor will allow for safe conduct of the Departments late May parturition surveys and late June/early July population surveys that are essential to management of this important and heavily utilized caribou herd. These surveys also require a great amount of flexibility in survey timing as they are dependent on favorable conditions to cause caribou to aggregate.

A similar situation exists for moose calving. During the moose calving period of May 15 to July 15, a 5,000 ft AGL will be necessary across the entire Fox 3 and the Proposed Paxson MOAs. Unlike caribou, moose do not have concentrated calving areas and spread out to calve, but are also susceptible to intense, low flying aircraft noise. Twinning surveys and calf mortality and survival studies are also conducted during this period from low-level fixed and rotor-wing aircraft. These surveys cannot be safely conducted with a 500 ft AGL floor to the MOAs.

We recommend the following mitigations to reduce stress on caribou and moose calves from low flying military aircraft during an important life stage.

- Establish a 5,000 ft above ground level (AGL) over annually identified pre and post calving areas for moose and caribou from May 15 to July 15 in the Fox3 MOA and the Proposed Paxson MOA

Delta Caribou Herd

We recommend increasing the height and extending the duration of the minimum over flight altitude to reduce stress on Delta Caribou calves during the important pre and post calving period of their lifecycle. The following modification to this mitigation will also allow for our annual count/census and composition surveys necessary to maintain herd sustainability and provide a popular hunting opportunity.

~~Protect~~ Conserve the Delta caribou herd by establishing a minimum overflight altitude of 35,000 feet AGL over annually identified pre and post calving areas (nominally from May 15 to ~~July~~ June 15).

Talkeetna Dall Sheep

Similar to mitigation provided for Dall sheep in the Delta River Corridor, we request minimum overflight altitudes in the Eastern Talkeetna Mountains for conservation of Dall sheep populations from May 15 to July 15 in the following areas:

- The mountains north and east of Chickaloon River,
- The block of land generally between the Upper Talkeetna River, northeast to Mt. Watana (just west of Lower Kosina Creek),

G0022

ALCOM Public Affairs

- 4 -

7/9/12

- The mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana Creek, and east over to Jay/Coal Creek.

Delta Bison

Proposed actions in the Donnelly Training Area Battle Area Complex Restricted Area (BAX RA) could have an impact on Delta bison movements and behavior, and cause bison to move toward the Delta Agricultural Project area earlier in the year, or discourage them from moving through the BAX RA during migration back to the Delta River in the spring. We recommend that the existing restrictions on disturbance to bison habitat areas under the U.S. Army Garrison Fort Wainwright, Alaska Special Interest Management Area be maintained.

Moose Hunting, Fox 2 and Eielson MOAs: The principal use in the identified ground evacuation areas within Eielson and Fox 2 MOA's is moose hunting, conducted during two general periods of the year – fall and winter. The fall period extends from August 15 to September 25, with the highest use period occurring from September 1 to 15. Hunting during the fall season occurs on every day of the week, including weekends. The winter hunt is primarily conducted during two time frames, early winter (November 15 to December 15), and late winter (January 15 to February 28), and are generally conducted on weekend days when weather conditions permit. The time period between December 15 and January 15 is generally avoided by hunters due to seasonally low temperatures. Hunting access in the fall is generally conducted through ORV trails, rivers, and airstrips and tends to be concentrated near or along these access points. Access in the winter is more dispersed due to snowmobile use. Of the areas affected by the "Definitive Actions", the foothills on the south flank of the Alaska Range are more extensively used than the adjacent low-lying wetlands. This is because the foothills support a diversity of high quality moose habitats and generally have higher densities of moose. Furthermore, the foothills offer vantage points for use by hunters in pursuit of game.

As a mitigating measure, we recommend that low level flights (below 5000 AGL) and ground based use not occur in the Fox 2 or Eielson MOAs during scheduled hunting seasons. Additionally, we request that low level flights not occur during the May 15 to July 15 pre and post calving period for caribou, moose and Dall sheep.

Wildlife Mortalities

Throughout the training areas, we request that all known wildlife mortalities caused by military activities be reported within 72 hours to the Department's Area Wildlife Staff.

Habitat Enhancement and Stream Crossings

If it is determined by the military that, stream crossings, habitat enhancement or alteration in any of the MOAs is a desired mitigation, we request consultation with the responsible Area Wildlife and Habitat Biologists to avoid unintended consequences and to obtain necessary permits. Recommended contacts are the Regional Supervisor's for the Division of Habitat, and Division of Wildlife Conservation based in the Departments Fairbanks area office.

G0022

ALCOM Public Affairs

- 5 -

7/9/12

Bears

Human generated waste products, primarily discarded or improperly stored food, from 1000 troops during field maneuvers could pose a wildlife attractant, particularly to bears. We previously noted that the DEIS did not address management actions to prevent wildlife from becoming habituated to human generated food and its associated negative impacts. A review of the draft document shows that there remains the need for the development of a comprehensive program to educate military personnel on how to manage human waste that may attract bears that could cause them to become habituated to human waste.

New Public Overflight Restriction Area

We appreciate the development of Alternative A. This Alternative does not expand R-2202 to the west or R-2211 to the East, and therefore leaves a popular area for hunting open for the public and for the Department's use on a regular basis. This area is one of the highest utilized hunting areas in GMU 20A (Figure 3-11, Page 3-58). Closing this area through the expansion of restricted areas R-2211 and R-2202 would have created a significant access hardship for the public and the Department.

Harvest of Wildlife for Subsistence and other uses

The discussion in Chapter 3.1.13.1 Impact Assessment Methodology contains confused and incorrect definitions of public lands and Conservation System Units (CSUs), as well as erroneous descriptions and ratings of community dependence on subsistence based on racial criteria.

Federal Public lands are defined in Section 102(3) of ANILCA as "...land situated in Alaska which, after the date of enactment of this Act, are federal lands...". Conservation system units (CSUs) are defined in ANILCA at 102(4) as "...any unit in Alaska of the National Park System, National Wildlife Refuge System, National Wild and Scenic Rivers Systems, National Trails System, National Wilderness Preservation System, or a National Forest Monument..." Because of the legal application of subsistence to federal public lands it is important to properly define these legal terms.

The discussion related to the dependence of subsistence by communities and their ratings is also flawed by the inclusion of the criteria "...whether the communities are predominately Alaska Native." Neither the Alaska Constitution or federal law regarding subsistence in Alaska differentiates subsistence use along racial lines, unless specifically permitted by Congress (re: Marine Mammal Protection Act, Endangered Species Act, etc.). While it is recognized that the Alaskan Native community has a long history of subsistence use, we request that the EIS revise this section to properly include existing State and Federal law regarding subsistence use and participation.

It should also be noted that through interpretation of the Alaska Constitution, under state law, all Alaska residents are considered eligible to conduct subsistence activities where that activity is allowed. The discussion as presented in the referenced section should be recognized as having no bearing on the allocation of fish and wildlife, which is under the purview of the Alaska Boards of Fisheries and Game, and the Federal Subsistence Board.

G0022

ALCOM Public Affairs

- 6 -

7/9/12

Also related to subsistence and other uses,

We appreciate the proposed mitigation to not conduct major flying exercises (MFEs) during the fall hunting season; however, the proposed September prohibition does not encompass all of the most important use periods, when over 5000 hunters and their households rely on this area for subsistence harvest of moose and caribou. Big game hunting in the area for subsistence and general uses begins with the August 10 opening for caribou and reaches a peak during the September 11 to September 20 period. Hunters are also in the field throughout the Proposed Paxson MOA and the Fox 3 MOA during the winter season -- most heavily between October 21 and the end of November, after which use is reduced as caribou migrate from the area and winter weather sets in. The Proposed Paxson MOA and the Fox 3 MOA also constitute the most popular and highly used areas in the state for small game hunting. This hunting occurs year-around with peak activity in August-October and February-March. To encompass these periods, we recommend the following mitigation:

- Conduct no MFEs from August 10 to September 30 and October 21 to November 31 in the Fox 3 MOA and the proposed Paxson MOA, and minimize MFEs during the February-March period to avoid disturbance or displacement of small game hunters.

Safety

The mitigation, *"Notify Alaska press outlets of the annual MFE schedule for release in publications such as the Milepost, visitor and travel guides, and various newspapers"* will help keep the public informed. We recommend development of a specific website devoted to this information, as well as publishing in local outlets such as the Valley Frontiersmen and Delta News (web and hard copy) in addition to the Fairbanks News Miner and Anchorage Daily News, and physically posting notices at public and impromptu access points along the road system. In addition, the DEIS should recognize that hunters, trappers, fisherman, landowners, miners, agency personnel, and other users employ float, ski, and tundra tire equipped aircraft and light helicopters to access these popular and high-use areas. Private airfields (See Appendix D) do not capture the vast number of "off-field" areas used for access with this equipment. Avoidance by military aircraft, as well as SUAIS radio-coverage, must be implemented with recognition of these uses if public safety is to be maintained.

We also recommend that the training schedules with associated area or airspace restrictions be published as early as possible in the calendar year to allow residents, subsistence and recreation visitors to the area to coordinate plans for use of the area. Many hunting and other outdoor use plans are made many months in advance so that this type of information would be useful to visitors and reduce conflicts.

Watana – Susitna hydroelectric Project

The DEIS fails to recognize the Watana-Susitna Hydroelectric Project in the Fox 3 MOA. This major effort includes numerous engineering, wildlife, fisheries and habitat studies that all use small aircraft for access, surveys, aerial radio-telemetry, and mapping that will greatly increase VFR traffic for many years. For example, wildlife studies alone will approximately double the flight hours in the Fox 3 MOA to over 800 hours per year. The study areas for this project compose up to 500 square miles in the existing Fox 3 MOA. While a 5000 ft AGL floor poses little safety concerns, the high level of traffic associated with this project creates serious potential airspace conflicts

G0022

ALCOM Public Affairs

- 7 -

7/9/12

at the lower 500ft AGL floor. Close coordination with the Alaska Energy Authority and associated agencies and contractors will be crucial to maintaining safety.

Civilian Airspace Management

We recommend meetings be scheduled on an annual or biannual basis and include ADFG staff participation. A commitment in the Record of Decision to conduct these meetings on a regularly scheduled basis would assist in ensuring that public input and the development of adaptive management is employed in this high public use area.

Coordinate with the FAA, ADFG, and local civilian aviation interests/stakeholders through the ACMAC, the U.S. Army Alaska Aviation Safety Standard Council, and other such forums to discuss and resolve issues of mutual interest affecting military and civilian airspace uses for existing and new SUA and restricted airspace on an annual or biannual basis.

Major Fighting Exercises (MFEs)

We recognize that expanded MFEs are integral to training needs in the JPARC; however, the September, December, January prohibition against MFEs will not adequately mitigate their affect on caribou and moose calving areas, sheep lambing and rutting areas, and popular hunting seasons. We recommend the following mitigation:

Conduct no MFEs during May 15 to July 15, August 10 to September 30, October 21 to November 31, and December, and January.

Spelling

We recommend a word search be performed to address spelling issues throughout the plan. For example Goodness River should be Goodnews River, and Paxson MOA should be Paxson MOA.

Page Specific Comments

Page 3-71. Hunting. Add ptarmigan to the primary species hunted in the area and revise the document to show that Dall sheep and goat seasons are not short, with the sheep season 40 days long and encompassing other high use seasons. There are no goat seasons within the proposed MOAs (there are few goats within the area).

Page 3-82: line 4. The vast majority of fish and wildlife surveys in the Proposed MOAs are conducted by the Department and not the land management agencies. The statement on line 6 regarding survey timing ("Mostly these occur in late summer/early fall and before the first snow") is incorrect. The routine survey schedule is as follows (surveys marked with asterisks are essential surveys that are conducted every year):

May 15 – June 10: Caribou parturition surveys*; moose twinning*, calf survival and periodic mortality surveys; occasional bear surveys.

June 20 – July 10: Caribou population estimate* and composition surveys*

Mid summer; Dall sheep surveys*

G0022

ALCOM Public Affairs

- 8 -

7/9/12

October 1-10: Caribou composition survey*

Following first adequate snow cover (~mid-October) and before Dec. 7: Moose population estimates*

May 5-June 5: Ptarmigan surveys (aircraft access)

Late March-Early April: Watana Su-Hydro winter range moose surveys* (scheduled for the next several years).

Monitoring of moose and caribou movements via aerial radio-telemetry: Year-around.

Page 3-82: Line 14. We appreciate that the DEIS recognizes the significant impacts of reduced access on livelihoods. It is important to also recognize that most of the Departments wildlife surveys are charter flights flown by small air taxi operators from around the region. Most of these operators also generate revenue from the transport of hunters, fishermen and other recreationists. A reduction in this economic activity could result in reduced availability of local air taxi operators for fish and wildlife surveys and monitoring, hindering the Departments ability to successfully manage fish and wildlife.

Page 3-82: Lines 22-24: It is misleading to state that avoidance of 1 or 3 NM allows access to private and public airports, respectively. Consider that, to avoid military training activities, aircraft will have to operated below 500' AGL enroute to the airport avoidance area. Many pilots will choose to avoid prolonged operation at below 500 ft AGL for safety purposes. Furthermore, mountainous terrain and windy conditions may further preclude safe flight at those low altitudes. These airports, as well as numerous "off-field" landing areas are critical for wildlife survey and animal capture activities. Also consider that "planning around military schedules" will likely have economic effects on aviation related business through reduction in overall activity and the generation of fees.

Page 3-84: Alternative E: Most of the comments above also apply to all action alternatives.

Page 3-97: Line 38. Harvesting subsistence resources is not a certain event. Thus a delays result in lost opportunity.

Page 3-97: Line 41. The stated intent of allowing for administrative survey flights to be conducted with minimal disruption is appreciated. Because of its importance and to ensure that it will be implemented in an agreed to manner, we request that date-specific mitigation efforts and agreements be specifically noted in the ROD for ease of reference.

Page 3-97: Line 43: See comments above for page 3-82, lines 22-24 above

Page 3-99 (Section 3.2.13.4 and elsewhere) Mitigations:

- No MFEs August 10 – September 30 and October 21 – November 30.
- No training activities below 5000 ft AGL to allow for essential wildlife surveys during the following periods:
 - May 15 – June 10
 - June 20 – July 10

G0022

ALCOM Public Affairs

- 9 -

7/9/12

- o October 1-10
- o After first adequate snow cover (~mid-October) and before Dec. 7 (this request will vary from year to year depending on snowfall and can take 5 to 10 days to complete depending on weather conditions. This effort can be coordinated on a seasonal basis.

To improve coordination between the military and local subsistence users, we request the final document commit to scheduling annual or biannual meetings in effected communities to determine and seek solutions to identified issues related to the subsistence use of the area. We request the following changes to this mitigation measure.

The preceding analysis of effects on this resource has identified potential adverse impacts. The following preliminary mitigation is under consideration as possible ways to reduce these impacts.

• All alternatives:

Expand consultation efforts with subsistence parties in the affected area on an annual or biannual basis to determine current subsistence use levels and areas on USAG-FWA lands as input into scheduling. Expand tribal consultation efforts with subsistence users about hunting and fishing programs on USAG FWA land. Continue to use a newsletter to provide information to subsistence users about existing and new military activities and the changes in access for subsistence users. Expand research and cooperative studies with Tribes to address possible effects of Air Force and Army activities on subsistence resources both directly within USAG-FWA installation boundaries and those outlying resources that may also be affected by military activities on DTA West, DTA East, YTA, and TFTA.

Appendix I

Page I-2. It appears that several plans in this appendix are outside the area of the plan and we question their inclusion in this plan. For example: Draft Revised Special Use Land Designation for the Togiak National Wildlife Refuge and Lower Goodnews River State DNR Hatcher Pass Planning, Chugach State Park, Nancy Lake State Recreational Area, BLM Bay Proposed Resource Management Plan and Final EIS.

Page I-43. The June 27 to July 11 flight avoidance area along the Delta River is inadequate to conserve Dall sheep lambing and rutting habitat. We recommend the flight avoidance period include May 15 to July 15 for lambing areas, and from November 15 to December 15 over rutting areas. We request annual contact with the Department to ensure these locations have not shifted or need adjustment.

Page I-48. We question the need to include game management units outside the area of the plan. These include GMU 9, 16, 17, and 19.

Appendix G

G0022

ALCOM Public Affairs

- 10 -

7/9/12

Page G-2, No. 9, Caribou - Overflights. Fox1 MOA, Fox2 MOA, and Proposed Paxson MOA should be included in this mitigation. We recommend increasing altitude and extending the minimum duration of the period to conserve the Delta Caribou calves during an important period of their life cycle and ensure their sustainability. The following modification to this mitigation measure will also allow for annual count/census and composition surveys necessary for us to continue to provide a popular hunting opportunity.

~~Protecting~~ Conserving the Delta caribou herd by establishing a minimum overflight altitude of 35,000 feet above ground level (AGL), over calving and post calving areas, in appropriate areas of the Fox1, Fox2, proposed Paxson, Birch, and Eielson MOAs from May 15 to ~~July~~ 15. Annually contact ADF&G to determine specific areas of avoidance.

Page G-2, No. 10 Dall Sheep - Overflights. We recommend adding the proposed Paxson MOA to the list of areas establishing a minimum overflight altitude. This is needed to conserve Dall sheep in the mountainous region north of the Black Rapids. Similar to mitigation provided for Dall sheep in the Delta River Corridor, we request minimum overflight altitudes in the Eastern Talkeetna Mountains for conservation of Dall sheep populations. In particular:

- The mountains north and east of Chickaloon River,
- The block of land generally between the Upper Talkeetna River, northeast to Mt. Watana (just west of Lower Kosina Creek),
- The mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana Creek, and east over to Jay/Coal Creek.

To encompass these concerns, we recommend the following mitigation measure be implemented:

~~Protect~~ Conserve Dall sheep by establishing a minimum overflight altitude of 5,000 feet AGL over lambing areas and spring mineral licks, in appropriate areas of Yukon 1, 2, 3, and 4, Buffalo, Eielson, Paxson, and Fox MOAs (nominally May 15 to July 15), and over rutting areas (nominally from November 15 to December 15). These areas will be identified during annual consultation with ADF&G prior to the May 15 and November 15 dates stated above.

Page G-3, No. 22 Aircraft, Habitat Protection. The document provides a good discussion of this important mitigation measure to protect important wildlife habitat in JPARC; however, to provide a more comprehensive list we request an annual meeting to update it. For example, we recommend adding the Oshetna River caribou calving grounds, Watana Creek caribou calving grounds, and the Eastern Talkeetna Mountains for Dall sheep populations. In particular, the mountains north and east of Chickaloon River, the mountain block between the Upper Talkeetna River northeast to Mt. Watana (west of Lower Kosina Creek), and the mountain block from the Parks Highway (Talkeetna up to Healy) then east over to Brushkana, and east over to Jay/Coal Creek. We request the following change to this mitigation.

Avoiding the creation of aircraft noise around the Gulkana and Delta National Wild and Scenic Rivers, Tangle Lakes area, Richardson Highway, and trumpeter swan nesting areas within the Fox MOA eastern boundary. These areas will be updated during annual consultation with ADF&G prior to May 15.

G0022

ALCOM Public Affairs

7/9/12

Appendix K, Mitigation Measures

Page K-11, Biological, 4th Proposed Mitigation. This mitigation measure should also apply to Fox3 MOA and the Proposed Paxson MOA. We also request a start date for this study.

Expand effort to conduct a detailed study to assess the impacts and effects of noise on wildlife, particularly key species, such as caribou and bison during critical life cycle seasons. Use information to include protection requirements within a noise management plan.

Page K-19, Land Use-Recreation. GMU 13 is an important moose and caribou hunting area, likely the most heavily used area in the state due to accessibility of the area to residents from Anchorage, the Matanuska Susitna Borough, and Fairbanks. In 2010, 5,015 individual moose hunters reported hunting in GMU 13, a number that has been steadily increasing since 2002. This increase is partially credited to the current active management programs which the state has invested significant time and energy to increase moose abundance for the benefit of consumptive users. Current objectives for moose are being achieved, with some additional increases planned. The overall management objective is to maintain a high level of harvestable moose with sufficient hunter participation annually to avoid habitat impacts. Caribou hunting is also highly popular with 4,887 hunters reporting hunting this area in 2010, with a peak participation of 19,397 hunters in 1996. As shown by the above discussion, GMU 13 is an important moose and caribou hunting area.

Currently, the EIS only lists Crosswind Lake and the Matanuska Valley Moose Range as hunting areas to avoid. However, the additional areas listed below support intense hunting for moose and caribou on a seasonal basis and should be added to the list. To accommodate this continued and important use, we request the following modifications to the first proposed mitigation measure shown on page K-19

Avoid overflight of popular hunting areas, campgrounds, and trails (5,000 feet AGL and half-mile lateral distance) during peak use periods between June 27 and July 11, ~~and from mid- August 10~~ through September 20, and October 21 to November 30, and other important hunting seasons determined in annual consultation with ADFG. Locations to avoid include:

- *Crosswind Lake, ~~and~~*
- *Matanuska Valley Moose Range,*
- *Denali Highway between Cantwell and Paxson,*
- *Richardson Highway between Gulkana and Black Rapids,*
- *Tak Cutoff (Glenn Highway) between Gakona and Mentasta,*
- *The Gakona/Chistochina River drainages,*
- *Upper Susitna River drainage (above Tyone R),*
- *Brushkana River drainage,*
- *Coal Creek drainage,*
- *Watana Creek drainage,*
- *Upper Nenana River/Wells Creek area,*
- *Lake Louise/Susitna/Tyone Lake system,*
- *MacLaren River drainage,*
- *Tangle Lake system,*
- *Hungry Hollow/Paxson/Summit/Fielding Lake areas,*

G0022

ALCOM Public Affairs

- 12 -

7/9/12

- Swede Lake drainage in Hungry Hollow down to the Alphabet Hills (bordered on the south by the W Fork Gulkana River).
- Gillespie/June/Nita/Dick Lakes along the Richardson Highway south of Paxson.
- Nelchina Public Use Area from the Glenn Highway near Eureka north to the Susitna River.

Page K-21, Land Use – Recreation. The list of areas to avoid currently appears to consist primarily of BLM campgrounds. However, many additional popular trails for hunting and other recreating in the area exist and merit inclusion. Several trails exist up and down the MacLaren River, including the MacLaren Summit Trail to the north, and trails on both sides going generally north, and a trail on the west side going south. Another trail system extends through the Glacier Lake/Sevenmile Lake/MacLaren River, with an additional trail up the West Fork MacLaren River for XX miles. Other known popular trails include:

- Swede Lake Trail,
- Middle Fork Trail (heads west of Meier's Lake),
- Round Top trail which heads east of the Richardson Highway towards Round Top Mtn,
- Haggard Creek Trail,
- Ewan Lake Trails (one from the east and one from the south of the lake),
- Lake Louise/Crosswind Trail,
- Tolsona Lake/Crosswind Trail,
- Butte Lake Trail,
- Coal Creek trail (starts east of Butte Lake),
- Moore's Camp Trail (starts at Mile 51 on Denali Highway goes south over the mountain and down to a MacLaren River crossing),
- Top of the World Trail near Paxson/Black Rapids,
- Chistochina River Trail,
- Mankomen Lake Trail,
- Indian River Trail,
- Slana River Trail.
- There is a huge network of trails all through the Nelchina Public Use Area, dozens, starting with the Eureka/Little Nelchina Trails, north to the Oshetna/Black River/Goose Creek/Busch Creek/Clarence Lake, and east over to the Moore Lake/Grayling Lake/Marie Lake areas west of Lake Louise/Susitna.

To accommodate the use of additional popular trails in the area, we request the following modifications to the fifth proposed mitigation measure shown on page K-21.

Avoid overflight of popular hunting areas, campgrounds, and trails (5,000 feet AGL and half-mile lateral distance) during peak use periods between June 27 and July 11, ~~and from mid-~~ August 10 through September 20, and October 21 to November 30, and other important hunting seasons determined annually with ADFG. Locations to avoid include:

- Brushkana Creek campground,
- Tangle Lakes campground,
- Paxson Lake campground,

G0022

ALCOM Public Affairs

- 13 -

7/9/12

- Clearwater Wayside,
- One Mile Creek/Wolverine Mountain,
- Tangle Lakes trail,
- Gulkana River Raft trail,
- Costner Glacier trail,
- Sourdough campground,
- Lake Louise State Recreation Area,
- MacLaren Summit Trail,
- Glacier Lake/Sevenmile Lake/MacLaren River Trail System,
- West Fork MacLaren River Trail,
- Swede Lake trail,
- Middle Fork Trail,
- Round Top Trail,
- Haggard Creek Trail,
- Ewan Lake Trails,
- Lake Louise/Crosswind Trail,
- Tolsona Lake/Crosswind Trail,
- Butte Lake Trail,
- Coal Creek trail,
- Moore's Camp Trail,
- Top of the World Trail,
- Chistochina River Trail,
- Mankomen Lake Trail,
- Indian River Trail,
- Siana River Trail,
- Nelchina Public Use Area Trail System,
- Eureka/Little Nelchina Trails,
- Oshetna/Black River/Goose Creek/Busch Creek/Clarence Lake Trail,
- Moore Lake/Grayling Lake/Marie Lake Trail,

Page K-24, Subsistence. The period prohibiting MFEs should encompass the period from 10 August – 30 September and 21 October – 31 November, instead of 20 August – September 20. This change will protect the most important subsistence hunting seasons for caribou and moose. We request the following modification,

No MFEs conducted during 10 August – 30 September and 21 October – 31 November ~~20 August – 20 September~~ in Fox 3 and expansion areas and new Paxon MOA. This restriction does not apply to US Army training or testing.

Page K-24, Subsistence. Biannual coordination meetings with the Department to review and determine the efficacy of avoidance areas and flight restrictions are essential to conservation and management activities.

Delineate and establish seasonal flight avoidance areas and overflight/operational restrictions over wildlife and other areas underlying new MOAs consistent with current restrictions identified in the 1997 Alaska MOA EIS. These restrictions would include minimum overflight altitudes over Dall sheep lambing

G0022

ALCOM Public Affairs

- 14 -

7/9/12

areas, spring mineral licks, and limiting overflights of wildlife in critical life periods as determined in coordination with ADFG.

Page K-24, Subsistence. We support modifying the existing Letter of Agreement in the following areas.

Modify existing Letter of Agreement with ADFG to avoid overflight of caribou and moose calving areas, and sheep lambing, mineral licks and rutting areas in Fox 3 expansion areas and new Paxon MOA.

Page K-25, Subsistence. We support these approaches, but request that the final Record of Decision commit to regularly scheduled annual or biannual meetings with the Department to monitor and review issues related to airspace.

Conduct annual or biannual meetings with regulating agencies and with communities dependent on subsistence resources under new airspace with a view to monitor impacts of Air Force activities on subsistence. Information would be used to adjust flight avoidance locations, or to add new ones.

Update the current SUAIS to include information on MOA activation and provide advanced notice of MFES to communities and management agencies that use and access lands underlying the Fox 3 MOA, the Fox 3 expansion areas, and the new Paxon MOA.

Sincerely,

Craig L. Fleener
Deputy Commissioner

RE: Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)

Dear Sir,

The Greater Fairbanks Chamber of Commerce would like to take this opportunity to comment on the referenced Draft JPARC EIS.

The Fairbanks Chamber supports the United States Air Force and the United States Army and its missions in Alaska and welcomes the expansion of the JPARC to accommodate modern and future training needs. We support the increased use of the JPARC and its planned expansion as this action is beneficial to the training of our military and the defense of our Nation, with no unmanageable negative impacts on our community under the current force structure at Eielson Air Force Base and Fort Wainwright.

The JPARC military training ranges and facilities, as a whole, far surpass in quality and quantity those found in other U.S. locations. The sheer size of the ranges:

- allows for the use of live ammunition from all Army, Air Force, and Navy platforms and weapons systems;
- allows for the Air Force to fly at combat speeds well over Mach 1;
- allows for joint exercises between the Army, Air Force, Marines, Navy, Coast Guard and our Allies in weather conditions ranging from sub-zero arctic temperatures to hot humid summer days; and
- results in the finest training opportunities for soldiers, sailors, and airmen within the United States.

A recent proposal by the Air Force to move the F-16 Aggressor squadron from Eielson Air Force Base (Eielson) to Joint Base Elmendorf-Richardson (JBER) could change the dynamic of the JPARC and affect our support for JPARC use and expansion.

The Fairbanks Chamber encourages the military to consider expansion of their missions and manning within Interior Alaska, and in return we will consider supporting associated reasonable requests to increase Alaska land and air space usage that accommodates this increased military activity. However, we will reconsider our position of support if the military proposes actions that may lead to a reduction of missions and manning in Interior Alaska.

Mission: The Greater Fairbanks Chamber of Commerce represents our members by advocating for a healthy economic environment and by building partnerships that promote the greater Fairbanks area as an attractive place for business and community.

Thank you for the opportunity to provide comment on the JPARC Modernization and Enhancement EIS. As the Alaska Department of Natural Resources Large Project Coordinator for the proposed Susitna-Watana Hydroelectric Project, I am forwarding the attached letter from the Alaska Energy Authority (AEA), the proponent for the Susitna-Watana project. Please reply with confirmation that the comments have been received by your offices.

The Susitna-Watana project information is relative to the JPARC Modernization and Enhancement EIS as the hydroelectric project anticipates construction of a 7000-foot long runway to accommodate Boeing 737 aircraft and construction of transmission lines connecting into the existing Railbelt transmission system. The attached letter provides information on the project area, the anticipated activities, transportation corridor alternatives, and the estimated project schedule for the Susitna-Watana Hydroelectric Project.

Please do not hesitate to contact myself or the Susitna-Watana AEA Project Manager, Mr. Wayne Dyok, if you need any further information.

RE: Submittal of comments concerning the Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the JPARC in Alaska (JPARC Modernization and Enhancement EIS)

Thank you for the opportunity to provide comment on the JPARC Modernization and Enhancement EIS. As the Alaska Department of Natural Resources Large Project Coordinator for the proposed Susitna-Watana Hydroelectric Project, I am forwarding the attached letter from the Alaska Energy Authority (AEA), the proponent for the Susitna-Watana project.

The Susitna-Watana project information is relative to the JPARC Modernization and Enhancement EIS as the hydroelectric project anticipates construction of a 7000-foot long runway to accommodate Boeing 737 aircraft and construction of transmission lines connecting into the existing Railbelt transmission system. The attached letter provides information on the project area, the anticipated activities, transportation corridor alternatives, and the estimated project schedule for the Susitna-Watana Hydroelectric Project.

In addition to the points raised by the AEA, it is important to note an increased level of public recreational use is expected due to the reservoir behind the dam, as well as lighting and electrical "noise" due to the hydroelectrical power generation.

Further information relating to Alaska's long range electrical generation capital improvement projects can be found in the Regional Integrated Resource Plan (RIRP), at <http://www.akenergyauthority.org/regionalintegratedresourceplan.html>.

Please do not hesitate to contact myself, or the Susitna-Watana AEA Project Manager, Mr. Wayne Dyok, if you need any further information.

Sincerely,

A handwritten signature in blue ink, appearing to read "Marie Steele".

AEA Comments JPARC Modernization and Enhancement EIS

G0024

July 9, 2012

INTRODUCTION

The Alaska Energy Authority (AEA) appreciates the opportunity to provide comments on the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft Environmental Impact Statement (Draft EIS). AEA is in the process of conducting environmental and engineering studies for the Susitna-Watana Hydroelectric Project to support a license application to the Federal Energy Regulatory Commission (FERC). AEA initiated the formal licensing process in December 2011 with the filing of a Pre-Application Document to FERC. Construction of the Susitna-Watana Project is expected to occur from 2017 through 2023, after which the facility will be placed in operation with a life of 100 years or more.

The Susitna-Watana Project would be located in the FOX 3 Military Operations Area (MOA). There is a potential for conflicts particularly because of AEA's need for and use of an airstrip to construct and operate the hydropower project and the military's need for low-altitude threat training, as well as other activities. AEA would like to ensure that the military's proposed actions would not adversely affect the construction and operation of the Susitna-Watana Project and vice versa. AEA proposes to meet with the Department of Defense (DOD) to discuss how both programs can coexist. We request further that the DOD consider the cumulative effects of the Susitna-Watana Project in the Final EIS.

DESCRIPTION OF SUSITNA-WATANA PROJECT

This section provides a brief overview of the Project location, facilities and proposed operational characteristics. For more detail regarding the Project facilities and operational characteristics, please refer to the PAD (AEA 2011; available on the Susitna-Watana Hydroelectric Project website, <http://www.susitna-watanahydro.org>). The proposed Project is located in the Southcentral region of Alaska, approximately 120 miles (mi) north-northeast of Anchorage and 110 mi south-southwest of Fairbanks. The Southcentral region of the state is geographically bounded by the Alaska Range to the north and west, the Wrangell Mountains to the east, and the Talkeetna Mountains to the south. This region encompasses 86,000 square mi of the total 586,000 square mi of the state. As proposed, the Project would include construction of a dam, reservoir and power plant on the Susitna River starting at river mile (RM) 184, approximately 34 mi upstream of Devils Canyon. Transmission lines connecting into the existing Railbelt transmission system and an access road would also be constructed.

Transportation Access

There would be both temporary and permanent site access facilities to provide a transportation system to support construction activities, and to facilitate orderly development and maintenance of the Project. The current planning assumes restricted public access during construction for

akenergyauthority.org

813 West Northern Lights Boulevard, Anchorage, Alaska 99503 T 907.771.3000 Toll Free (Alaska Only) 888.300.8534 F 907.771.3044

G0024

safety considerations. Another goal is to co-locate access roads and transmission facilities, to the extent possible, in the same corridor to minimize environmental impacts

Three possible alternatives for access roads and transmission lines have been identified for the Project (Figure 1). Two of the alternatives would accommodate east-west running transmission lines in combination with a new site access road connecting to the Anchorage-Fairbanks Intertie Transmission line and the Alaska Railroad. One of these corridors, designated as the Chulitna Corridor, would run north of the Susitna River, and extend to the Chulitna siding area. The other alternative, designated as the Gold Creek Corridor, would run south of the Susitna River, and extend to the Gold Creek area. A third corridor, designated as the Denali Corridor, would run due north, connecting the Project site to the Denali Highway by road over a distance of about 44 mi. If a transmission line is constructed along this corridor, it would be extended westward along the existing Denali Highway and connect to the Alaska Intertie near Cantwell.

If the Denali Corridor is selected the affected sections of the Denali Highway will be upgraded in order to facilitate safe construction of the Project. The Denali Highway would not be a part of the Project.

Regardless of which road is chosen, the majority of the new road will follow terrain and soil types that allow construction using side borrow techniques, resulting in a minimum of disturbance to areas away from the alignment. A berm type cross section will be formed, with the crown of the road being approximately 2 to 3 ft above the elevation of adjacent ground. To reduce the visual impact, the side slopes will be flattened and covered with excavated peat and other naturally occurring materials. A 200-foot right-of-way will be sufficient for this type of construction.

Permanent access to the Watana Dam site will connect with the existing Alaska Railroad either at Chulitna, Cantwell or Gold Creek, where at the chosen location a railhead and storage facility occupying up to 40 ac will be constructed alongside the existing passing bays. New sidings of a length up to 5,000 ft will be constructed so that off-loading and transfer of goods and materials can take place without interrupting the operations of the Alaska Railroad Corporation (ARRC). This facility will act as the transfer point from rail to road transport and as a backup or interim storage area for materials and equipment, and as an inspection and maintenance facility for trucks and their loads. Within the 40 ac would be a small residential camp for drivers trucking equipment to the construction site, for laborers and staff operating the transfer, and for support staff such as cooks and maintenance workers.

If the Denali Corridor is chosen for road access, in the community of Cantwell the pavement on the first section of the Denali Highway will be extended for a distance of approximately 4 mi to eliminate any problem with dust and flying stones. In addition, the following measures will be taken:

- Speed restrictions will be imposed along appropriate segments;

G0024

- Improvements will be made to the intersections including pavement markings and traffic signals.

Electric Transmission Facilities

The transmission lines will begin at Watana Dam and consist of three single-circuit 230-kV lines. The same three corridors under consideration for the access road are also those under consideration to connect the Project primary transmission lines to the Alaska Intertie. Depending on which corridor is chosen, the transmission system will include a switching station in the point of tie in (either at Chulitna, Gold Creek or Cantwell). From the Watana substation, the transmission corridors are essentially co-located with the corridors for the access roads except for two specific areas:

- 1) For the northern westward route (Chulitna Corridor), only the first five mi of the twin 230-kV transmission lines will not follow the coincident road corridor. The two lines will cross the river from the switchyard (together with the line destined for the northern route) in a northerly direction for two mi, after which the two lines will turn northwesterly to cross Tsusena Creek and three mi later will intersect the Chulitna road corridor. At the extreme westerly end of the corridor, it will widen to facilitate the divergence of the road and the transmission line which will continue to a switching station on the Alaska Intertie.
- 2) For the southern westward route (Gold Creek Corridor) the transmission lines would not follow the planned road corridor, rather the transmission lines can span the rough topography running more parallel to the Susitna River. Near the westerly end of the corridor, both the transmission lines and road can be co-located into one single corridor all the way to Gold Creek where the transmission lines would terminate in a new switching station on the existing Alaska Intertie.

For the northern route, the only divergence between the road and transmission line corridor will occur at Deadman Lake, at which location the road will be aligned west of Deadman Hill, while the transmission will follow a lower elevation corridor on the east of the hill. Both corridors will rejoin some 9 mi later on the north side of the Deadman Hill. At the Denali Highway, the northern transmission corridor will turn west and continue along the Denali Highway to the Cantwell switching station.

The right-of-way for the transmission lines within the corridors will consist of a linear strip of land. The width will depend on the number of lines. The transmission rights-of-way will be 200, 300, or 400 feet, depending on whether one, two, or three lines run in parallel.

The switching and substations will occupy a total of approximately 16 ac.

Rights-of-way for permanent access to switchyard and substations will be required linking back to the permanent site access road. These rights-of-way will be 100 ft wide.

Access to the transmission line corridors will be:

G0024

- a) Via unpaved vehicle access track from the permanent access roads at intermittent points along the corridor. The exact location of these tracks will be established in the final design phase.
- b) By helicopter, where there is no access road projected.

Within the transmission corridor itself an unpaved vehicle access track 25 ft wide will run along the entire length of the corridor, except at areas such as major river crossings and deep ravines where an access track would not be utilized for the movement of equipment and materials.

Dam and Reservoir

As currently envisioned, the Project would include a large dam with a 20,000-acre (ac) reservoir. The type and height of dam construction are still being evaluated as part of ongoing engineering feasibility studies, but early comparisons have demonstrated that it will most likely be a roller-compacted concrete structure. The dam has a nominal crest elevation at elevation (El.) 2,025 ft mean sea level (msl) corresponding with a maximum height of approximately 700 ft above the foundation and a crest length of approximately 2,700 ft. Following completion of the studies mentioned above, a nominal crest elevation up to El. 2,125 ft msl may be proposed in the license application, corresponding to a maximum dam height of up to 800 ft above the foundation.

The Watana Reservoir, at normal operating level of El. 2,000 ft msl, will be approximately 39 mi long with a maximum width of approximately 2 mi. The total water surface area at normal operating level is approximately 20,000 ac. The minimum reservoir level will be 1,850 ft msl during normal operation, resulting in a maximum drawdown of 150 ft. However, a maximum drawdown of up to 200 feet is still being considered. The reservoir will have a total capacity of 4.3 million ac-ft, of which 2.4 million ac-ft will be active storage.

Construction materials for the dam and appurtenant structures will utilize, as far as possible, rock from the structure excavations to minimize the quarry development. Stable excavations and rock cuts will be designed with suitable rock reinforcement and berms.

Thick alluvial deposits will be removed from the river bed in order to found the dam on sound bedrock.

Hydroelectric Facilities

The powerhouse will be located immediately downstream of the dam, and will house three generating units, each with a nominal capability of 200 MW unit output under average net head (which will be close to the design head) for a total plant capacity of 600 MW under average head. However, based on discussions with Railbelt utilities regarding electrical system reliability, AEA may propose four units with a nominal capacity of 150 MW and a total capacity of 600 MW. The capacity of the Project eventually proposed for licensing could extend up to

G0024

800 MW. The exact sizing and number of units may change as a result of further transmission system studies.

The average annual energy of the project will be 2,500,000 megawatt hours. The powerhouse will be designed and constructed with an extra empty generating unit bay for the potential installation of a fourth unit at some future time. Optimization studies are ongoing.

There would be two outlet works facility structures and four power intake structures (one corresponding to the extra unused powerhouse bay). The outlet works facility in conjunction with the three powerhouse units will be sized to allow discharge of a 50-year flood before flow would be discharged over the spillway.

Ancillary Facilities

Construction of the Watana Dam site development will require various facilities to support the construction activities throughout the entire construction period. Following construction, the operation of the Project will require a small permanent staff and facilities to support the permanent operation and maintenance (O&M) program.

The most significant item among the temporary site facilities will be a construction camp (Figure 2). The construction camp will be a largely self-sufficient community normally housing approximately 800 persons, but with a peak capacity of up to 1,000 people during construction of the Project. After construction, it is planned to remove most of the camp facility, leaving only those aspects that are to be used to support the smaller permanent residential and operation and maintenance facilities.

Other site facilities include contractor work areas, site power, services, and communications. Site power and fiber optic cabling will be brought either on the transmission line route, or along the side of the access road. Items such as power and communications will be required for construction operations, independent of camp operations.

Permanent facilities will include community facilities for O&M staff members and any families. Other permanent facilities will include maintenance buildings for use during operation of the power plant.

AEA plans to construct a 7000-foot long runway that would accommodate Boeing 737 aircraft (Figure 2). The runway would like be constructed on the north side of the Susitna River, east of the proposed dam site.

SUMMARY

AEA appreciates the effort put forth by the DOD in preparing the Draft EIS. AEA will be conducting detailed environmental studies within the FOX 3 MOA over the next three years in anticipation of submitting its FERC license application for the Susitna-Watana Project. We

G0024

welcome the opportunity to work with DOD to ensure that the goals of JPARC and AEA can both be met. Please contact the AEA Project Manager, Wayne Dyok, at 907-771-3955 should you require further information on the project.

Very truly yours,

A handwritten signature in dark ink, appearing to read "Wayne M. Dyok", with a stylized flourish at the end.

Wayne M. Dyok, Project Manager

RE: Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges,
Airspace and Training Areas in the Joint Pacific Alaska Range Complex

To Whom It May Concern:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace and Training Areas in the Joint Pacific Alaska Range Complex. Please note our ability to perform a detailed analysis of the Draft EIS is limited by the absence of an accompanying Draft Aeronautical Proposal for Modification of Special Use Airspace (SUA). Development and submittal of a Draft Aeronautical Proposal initiates an aeronautical study by the FAA to evaluate impacts to the National Airspace System (NAS), which can influence the ultimate configuration of the proposed airspace.

SUA proposals are subject to both environmental and aeronautical processing requirements. Although they are distinct and separate actions, they require closely coordinated efforts. The aeronautical study can significantly impact the environmental study, leading to unnecessary costs and delay. Similarly, the environmental study can significantly impact the aeronautical study.

We highly encourage your team to continue development of a Draft Aeronautical Proposal in coordination with Anchorage Air Route Traffic Control Center as well as Anchorage and Fairbanks Approach Controls.

Attached are comments/concerns found during the review of the EIS.

Thank you for the opportunity to comment. We look forwards to continuing the positive and long lasting relations the FAA has with the DoD.

Sincerely,

John Warner
Manager, Operations Support Group
Western Service Center

Lt. General Steve Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 120
Joint Base Elmendorf-Fort Richardson, Alaska 99506

Dear Lt. General Hoog:

The Citizens' Advisory Commission on Federal Areas (CACFA) has reviewed the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft Environmental Impact Statement (DEIS).

The Citizens' Advisory Commission on Federal Areas is a 12 member organization established by the State of Alaska in 1981 and reauthorized in 2007. Alaska Statute (AS) 41.37.220 directs the Commission to "consider, research, and hold hearings on the consistency with federal law and congressional intent on management, operation, planning, development, and additions to federal management areas in the state [and] on the effect of federal regulations and federal management decisions on the people of the state."

We appreciate the opportunity to provide comments on the important proposals contained in the JPARC EIS. We also are thankful for the extension of the public comment period. ALCOM has made a notable effort to reach out to the affected communities across Alaska with its public meeting schedule and through the *ad hoc* Working Group meetings since public scoping began for the DEIS. Extending the comment period also demonstrates a commitment to the public process and to the affected public by allowing more time to review and analyze a lengthy and complicated document. Please accept the following comments.

The Commission recognizes the crucial role the military plays in defending our nation. We support the Department of Defense's mission and understand the need for training areas to ensure the readiness of our military forces. Commission members do, however, have concerns about the potential impacts from the proposed expansion of some of those training areas as well as other elements of the proposals outlined in the DEIS.

The Commission fully understand the vital role the military plays in Alaska's economy. At the same time, the civil aviation industry makes significant economic contributions to the state.

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

According to the Aircraft Owners and Pilots Association, the civil aviation industry in Alaska contributes approximately \$3.5 billion to the state's economy and supports an estimated 47,000 directly and indirectly related jobs.¹ In addition, civil aircraft routinely provide the most economical and feasible means of travel for Alaskans as well providing the primary method of access for utilizing many of the resources of the state. It is essential that a balance be struck between the military's operational and training needs and those of the civilian population as they are supported by the civil aviation industry.

FOX 3 MOA Expansion and New Paxon MOA

The proposed expansion of the Fox 3 Military Operations Area (MOA) and designation of a new Paxon MOA represent a significant expansion in the amount of Alaskan airspace directly affected by military training activity. Under Alternative A the amount of airspace included within MOAs in this region of the state would more than double, increasing from 3,138,000 acres (4,903 sq. miles) to 7,531,000 acres (11,767 sq. miles). Under Alternative E, MOAs would increase in size to 6,401,000 acres (10,001 sq. miles).

The Commission has heard from members of the public who are concerned that 2/3 (67%) of the lands affected by the existing MOA and the proposed expansion areas are State owned. They find it disconcerting that with 60% of the lands in Alaska federally owned, the lands most impacted by the proposals in the DEIS are state lands. Many Alaskans believe that it would be more appropriate to designate MOAs over federal lands.

The information in Table 3-12 *Land Status* should be revised to more accurately reflect actual land status in the Fox 3 MOA and the proposed Paxon MOA. The *Notes* section for Table 3-12 defines State land as including State patented, State tentatively approved and State land disposals. State land disposals are not State lands; they are lands that have been placed in private ownership. They should be included in Table 3-12 under *Private*. Under Note 4, private lands should also include Native allotments. Also, by definition, there is no such thing as "privately owned BLM land." We assume that this category would include homesites, trade and manufacturing sites, homesteads and patented federal mining claims that have been conveyed into private ownership.

The DEIS indicates that the proposed expansion of the FOX 3 MOA and designation of a new Paxon MOA have the potential for significant adverse impacts to airspace management and use, noise levels, flight safety, land management and use, recreation and socioeconomics and that management actions or mitigations are required to avoid or reduce impacts. The Commission agrees with this assessment. In addition, should the Fox 3 MOA be expanded and/or the Paxon MOA designated, we generally support the proposed mitigations outlined in Table K-2 of Appendix K.

The public has expressed significant concern with the expansion of the FOX 3 MOA and the creation of the Paxon MOA. Of even greater concern is the proposal to lower the minimum altitude restriction for military aircraft from 5,000 feet AGL to 500 feet AGL. The area that

¹ *The Economic Contribution of the Aviation Industry to Alaska's Economy – prepared by Northern Economics, Inc., Anchorage, Alaska for the Alaska Department of Transportation, January 2009*

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

would be included in the proposed expansion is used extensively by general aviation pilots, air taxi operators and transporters to support hunting camps and mining operations, conduct air tour operations, access recreational areas or make other uses of this region. Given its proximity to Fairbanks, Anchorage, the Mat Su Borough and the Copper River Basin, the airspace is heavily used by civilian aircraft throughout the year. Lowering the minimum altitude to 500 feet AGL greatly increases the collision potential with high-speed military aircraft engaged in training maneuvers in the Fox 3 MOA. Because of the heavy use of the proposed Fox 3 expansion area for access to the southern Alaska Range, the Denali Highway, the Nelchina Basin and the Talkeetna Mountains, and to minimize the risk of mid-air collision, expansion of the Fox MOA should be limited to no lower than 5,000 feet AGL, and to the smallest possible lateral extent to minimize the risk of mid-air collision.

The Commission is disappointed that there is no high altitude only alternative for the proposed Paxon MOA which covers Isabel Pass and portions of the Eastern Alaska Range. During scoping, there was considerable public concern about the potential negative impacts to civilian air operations from military aircraft operating as low as 500' AGL if this MOA is designated. Isabel Pass is a major Visual Flight Rules (VFR) route for civilian aircraft. It links northern and interior Alaska with south central and southeastern Alaska. As with the proposed Fox 3 expansion area, this route is used extensively by civilian aircraft to access hunting and fishing areas, private cabins and homesites, mining operations and small airstrips on the southern flanks of the Alaska Range. We do note that the low altitude Paxon MOA would extend from 500 feet AGL up to but not including 14,000 feet MSL and the MOA would only be used during major flying exercises (MFE).

The DEIS (Appendix K, page K-9) proposes the following mitigation for the Fox 3 MOA and the proposed Paxon MOA is designated:

"Establish or expand existing VFR flyway corridors as necessary to provide VFR aircraft transit through areas that may be affected by high density military flight activities within/near the proposed airspace."

While designation of specific VFR flyway corridors may be realistic in the Fox 3 MOA, the highly variable weather in the area of the proposed Paxon MOA makes designation of a single corridor unfeasible. It would also concentrate VFR traffic in an already limited area and increase the potential for a mid air collision between civilian and military aircraft. We strongly suggest that if the Paxon MOA is designated, it should be limited to high altitude use only.

The DEIS states there is a potential for adverse impacts on biological resources, public access, and subsistence, but that impacts are not expected to be significant and that management actions or mitigations may be required to avoid or reduce impacts. The Commission believes that the potential exists for significant adverse impacts to these three resources. We suggest the development of mitigation measures for inclusion in the final EIS and Record of Decision.

The DEIS acknowledges in the footnotes for Table 3-11 that while caribou are prevalent throughout the Fox 3 MOA, calving and breeding occur predominately in the proposed expansion area. The footnote for Dall sheep in Table 3-11 states that they are most prevalent

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

in the Fox 3 expansion area and the proposed Paxon MOA, but that no “calving” (should be lambing) is identified. Table 3-11 contains similar information that habitat, including nesting habitat, for ducks, geese and trumpeter swans is also prevalent in the proposed Fox 3 expansion area and proposed Paxon MOA. There is little additional discussion of the use of the proposed Fox 3 expansion area for caribou calving and breeding in the affected environment section of the DEIS. More information should be included in the final EIS (FEIS).

In spite of the proposal to include important caribou breeding and calving habitat, waterfowl nesting areas and other wildlife concentration areas in the proposed Fox 3 MOA extension and the proposed Paxon MOA, the DEIS (Appendix K, Page K-11) proposes only the following mitigation measure:

“Continue to monitor effects of military training, including overflights on select wildlife species (especially herd animals, waterfowl, and raptors) and fisheries during critical seasons such as breeding, young-rearing, and migration. Use knowledge to develop and implement strategies to minimize disturbance to priority wildlife in existing and new SUAs. This would help natural resources and range managers to coordinate training schedules that minimize impacts on wildlife populations.”

Because of the importance of this area and its wildlife resources for a wide range of uses and user groups, the Commission submits that simply monitoring the effects of training overflights is not sufficient to protect those resources. Previous studies and surveys have established the effects of these types of activities on biological resources.

The FEIS and ROD should include specific mitigation measures for caribou and moose during calving and post-calving periods in the existing Fox 3 MOA and for the proposed expansion area, including the proposed Paxon MOA. Based on our discussions with ADF&G biologists and others, the Commission suggests that a minimum elevation of 5,000 feet AGL be maintained from May 15 through July 15 throughout the existing Fox 3 MOA, including any expansion area. This will reduce stress on the Nelchina Caribou Herd during critical calving and post-calving period.

The DEIS lists an existing mitigation measure (Reference ID 429, Appendix K, pg. K-6) for the Delta Caribou Herd calving areas which established a minimum overflight altitude of 3,000 feet AGL from May 15 to June 15. The Commission suggests modifying the mitigation by increasing the minimum altitude to 5,000 feet AGL and extending it from May 15 to July 15.

We also suggest adoption of the same May 15 to July 15 flight restriction of 5,000 feet AGL for moose in both the Fox 3 MOA and the proposed Paxon MOA. Even though moose do not have concentrated calving areas, they are susceptible to low level, high speed aircraft overflights during calving and post calving periods.

The Commission supports the proposed mitigation for the FOX MOA and the proposed Paxon MOA to allow supersonic operations only above 5,000 feet AGL or 12,000 feet MSL, whichever is higher

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

Because of the high potential for adverse impacts to the resources in the MOAs, appropriate mitigation measures must be developed. In order to effectively identify, develop and implement necessary mitigation measures the Commission suggests the Alaskan Command establish a comprehensive program involving regular consultation and coordination with the Alaska Department of Fish and Game, the Alaska Department of Natural Resources, and Federal land management agencies. Consultation should also include public user groups, private property owners, and the civil aviation community. This consultation and coordination should continue through the FEIS and Record of Decision, the FAA review of the airspace proposals and the implementation of this plan as its impacts will continue to affect all parties.

Special Use Airspace Information Service

The Special Use Airspace Information Service (SUAIS) has been successful in making civilian pilots aware of planned and ongoing military aircraft activity in the JPARC airspace complex. AOPA has indicated that the SUAIS has greatly improved the situational awareness of both civil and military airspace users. However, also according to AOPA, pilots have reported that in the eastern portion of the existing complex communications are not adequate. The result has been difficulties with the mix of civil uses and military training flights.

While we understand that the SUAIS recently has been upgraded to increase radio coverage by reactivating one of the VHF radio repeaters, any further expansion of the airspace complex will only increase problems unless radio coverage, staffing and other necessary components of the SUAIS are expanded proportionally to allow civilian pilots to communicate with Range Control when MOAs are active.

The DEIS (Appendix K, page K-8) proposes the following mitigation measure:

"Pursue funding for any communications enhancements that may be needed to expand coverage within those expanded SUA areas."

We suggest that committing only to "pursue funding" is not satisfactory. ALCOM should develop a plan to identify what is required for expansion of the SUAIS to ensure sufficient and reliable communication between civilian pilots and the military. A workable plan and funding to implement the plan should be in place before any expansion of the Fox 3 MOA or the designation of the Paxon MOA occurs.

Unmanned Aerial Vehicle Corridors

Under the proposed action in Alternative A, the DEIS proposes to establish seven FAA approved Unmanned Aerial Vehicle (UAV) corridors. Alternative B would establish the same seven UAV corridors via a Certificate of Authorization granted by the FAA. These corridors would extend from Eielson Air Force Base and Allen Army Field at Fort Wainwright to various restricted air space areas. These corridors would be located in and near the second most heavily used airspace in Alaska. The civilian aviation community has expressed

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

significant concerns about the designation of restricted air airspace for operation of UAVs in this area.

The Commission recommends the adoption of Alternative B as an interim measures until such time as the FAA complies with the provisions of Public Law 112-95 the *FAA Modernization and Reform Act of 2012*. Section 334, *Public Unmanned Aircraft Systems*, directs the Secretary of Transportation to issue “guidance regarding the operation of public (military and other government agency) unmanned aircraft systems to –

- (1) expedite the issuance of a certificate of authorization process;
- (2) provide for a collaborative process with public agencies to allow for an incremental expansion of access to the national airspace system as technology matures and the necessary safety analysis and data become available, and until standards are completed and technology issues are resolved;
- (3) facilitate the capability of public agencies to develop and use test ranges, subject to operating restrictions required by the Federal Aviation Administration, to test and operate unmanned aircraft systems; and
- (4) provide guidance on a public entity's responsibility when operating an unmanned aircraft without a civil airworthiness certificate issued by the Administration.

(b) **STANDARDS FOR OPERATION AND CERTIFICATION.**—Not later than December 31, 2015, the Administrator shall develop and implement operational and certification requirements for the operation of public unmanned aircraft systems in the national airspace system.

Alternative B, designation of UAV corridors via a certificate of authorization, would still allow ALCOM to meet its mission and training requirements until such time as the Secretary of Transportation issues the necessary guidance and any necessary regulations for operating UAVs in the national airspace system. Under the provisions of Public Law, the Secretary should have already entered into an agreement with the military to simplify the process for issuing certificates of authorization. In addition, the certificate of authorization process should provide additional opportunities for public involvement before a final decision is made on designation of these corridors.

Subsistence

The Commission is concerned about the Impact Assessment Methodology used in the DEIS to assess the level of dependence on subsistence resources by communities potentially affected by the proposed Fox 3 MOA expansion and the proposed Paxson MOA. In section 3.1.13.3, Chistochina, Dot Lake and Gulkana are listed as having a high dependency and Cantwell, Gakona, Glennallen and Paxson are considered to have a medium dependency. Chickaloon is included in Table 3-24, but is assigned no ranking. We note that the 1982 harvest and use data for Chickaloon are also incorrect.

We find no basis for making different high dependency - medium dependency rankings for these communities when all pertinent factors are considered. All of these communities are on

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

the road system and have similar access to alternative resources. In addition, for the eight communities listed in Table 3-24, an average of 97.25% of households participated in subsistence, with no community having less than 92.7% participation. For the seven communities for which information was available, residents harvested an average of 158 pounds of subsistence resources per capita. Harvest for Paxson, which is ranked as having a medium dependence, harvested 289 pounds per capita. This is more than the amount of per capita harvest for Dot Lake (115 pounds) and Gulkana (152 pounds). However, both of those communities were ranked by the DEIS as having a high dependence on subsistence.

A more realistic assessment of the subsistence harvest data for these communities would indicate that all of them have a high dependence on subsistence. As we did in our scoping comments, we point out that the preference for subsistence uses on Federal public lands in Alaska is provided to all rural residents, both Native and non-Native, under Title VIII of the Alaska National Interest Lands Conservation Act (ANILCA). Congress made that finding very clear in Section 801(4):

"in order to fulfill the policies and purposes of the Alaska Native Claims Settlement Act and as a matter of equity, it is necessary for the Congress to invoke its constitutional authority over Native affairs and its constitutional authority under the property clause and the commerce clause to protect and provide the opportunity for continued subsistence uses on the public lands by Native and non-Native rural residents;"

Ranking a community's dependency on subsistence resources on the basis of the percentage of Native or non-Native residents is inconsistent with both ANILCA Title VIII, as well as federal and state regulations. While it may be appropriate to rank an affected community's dependency, other criteria should be used. We suggest that the discussion in Section 3.1.13 and any discussion of statutory or regulatory provisions in Section B.13.2 be revised accordingly.

To avoid significant adverse impacts to hunting activities regulated under the State of Alaska's general hunting regulations in the Fox 3 MOA (existing and proposed expansion area) and the proposed Paxon MOA, we recommend that no major flying exercises be conducted in these areas from August 10 to September 30 and October 21 to November 31. This will prevent disruption of big game hunting in these areas during the peak seasons.

Fox 2 MOA and Eielson MOA

These areas are used extensively by moose hunters during the fall and winter. The fall hunt extends from August 15 to September 25, with most use occurring between September 1 and September 15. Winter hunting usually falls within two timeframes, November 15 to December 15 and January 15 to February 28. As a mitigating measure, the Commission recommends no major fly exercises during the fall and winter hunting periods and no flights below 5000 feet AGL.

Realistic Live Ordnance Delivery Area

G0026

Lt. General Steve Hoog
JPARC Draft EIS

July 9, 2012

The Commission is concerned about this proposal which would affect 163,230 acres of State owned land under Alternative A and 234,600 acres of State owned land under Alternative B. As the DEIS points out, this area is located within State Game Management Unit (GMU) 20A and is extensively used for moose hunting, with over 4,000 moose permits issued annually. More than 1,100 moose were harvested from GMU 20 A over the last several years. Also harvested are brown bear, black bear, and Dall sheep. Trapping also occurs throughout the entire area. More importantly, this is a priority use area by residents from the Fairbanks area. Any reduction in use would have significant impacts on area hunters and trappers. Should this proposal be adopted under either alternative, specific mitigation measures must be developed in consultation with the Alaska Department of Natural Resources and the Alaska Department of Fish and Game.

In addition, because this proposal would require action by the Alaska Department of Natural Resources to reclassify this area, the Commission will submit to the department any recommendations it may determine appropriate and to be within the scope of its responsibilities.

We again appreciate the opportunity to comment on this project. Please maintain our contact information for future notifications, and contact our office if there are questions about our comments. Thank you.

Sincerely,

Stan Leaphart
Executive Director

Re: EPA comments on the Draft Environmental Impact Statement for the Alaskan Command's Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex, EPA Project #10-066-DOD.

To Whom It May Concern:

Thank you for the opportunity to review the Draft Environmental Impact Statement for the Alaskan Command's (ALCOM) Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex, Alaska (CEQ # 20120090). We have reviewed the EIS in accordance with our responsibilities under National Environmental Policy Act and Section 309 of the Clean Air Act. Section 309 specifically directs the EPA to review and comment in writing on the environmental impacts associated with all major federal actions as well as the adequacy of the EIS in meeting procedural and public disclosure requirements of NEPA.

We appreciate ALCOM's effort to comprehensively evaluate all twelve actions (six projects and six programmatic actions) identified as appropriate for evaluation in the recently developed Joint Pacific Alaska Range Complex Master Plan. We believe this has added value to the consideration of cumulative impacts and provides for more complete disclosure of impacts for the decision maker as well as the public. However, we note that the complexity of multiple projects and actions without identification of preferred alternatives makes the review quite challenging.

Because preferred alternatives are not identified, and because the potential intensity of impacts varies greatly from alternative to alternative, we have rated the impacts associated each alternative individually. Please see the table below identifying our ratings and rating justification. Definitions of our ratings are attached.

Action	Rating	Justification
FOX 3 MOA Expansion and New Paxson Military Operating Area (MOA)	EO	Potentially serious impacts to noise receptors, land use, recreation and other socioeconomic resources, aviation and aviation safety; adverse impacts to air quality, biological resources, access, subsistence and environmental justice.
Realistic Live Ordnance Delivery	EO	Potentially serious impacts to noise receptors, land use, recreation and other socioeconomic resources, aviation and aviation safety.
Battle Area Complex Restricted Area	EC	Adverse impacts to aviation, noise receptors

Printed on Recycled Paper

G0027

Expand Restricted Area R-2205	EC	Potentially moderate impacts to noise, air and land use, hazardous waste, and multiple socioeconomic resources
Night Joint Training	LO	No or minimal adverse impacts to resources
Unmanned Aerial Vehicle Access	EC	Potentially serious impacts to airspace use and aviation safety
Enhanced Ground Maneuver Space	EO	Potentially serious impacts to aquatic, physical, and biological resources
Tanana Flats Training Area Roadway Access	EO	Potentially serious impacts to aquatic, physical, and biological resources
Joint Air-Ground Integration Complex	EC	Potentially serious impacts to physical and biological resources
Intermediate Staging Bases	EC	Potentially serious impacts to physical and biological resources
Missile Live Fire for AIM-9 and AIM-120 in the Gulf of Alaska	LO	No or minimal adverse impacts to resources
Joint Precision Airdrop System Drop Zones	EC	Potentially serious impacts to socioeconomic resources

We have given the EIS an overall adequacy rating of “2” (Insufficient Information). Generally our impacts (alpha) rating is based on our concerns regarding potential impacts to water quality and aquatic habitats, noise receptors, air quality, subsistence, and other socioeconomic factors, such as safety and other adverse impacts to the private aviation community. Our adequacy rating is based on the concerns we have with the criteria used for the “subsistence community” analysis, additional information needed for direct and cumulative impacts analysis, and lack of use of monitoring data from previous projects (e.g. 1997 Alaska MOA EIS) to help inform this EIS.

We recognize the need for the transition to different training activities to fully meet the training and testing requirements for forces and activities in and near Alaska. We also recognize, however, that an increase and expansion of military training activities and areas will result in additional impacts to surrounding communities, users, and resources. We offer the following recommendations to avoid, minimize and mitigate adverse impacts.

Potential Impacts

We recommend that ALCOM continue to work closely with potentially impacted stakeholders (general and commercial aviation owners and groups, tribal governments, land owners, subsistence and sport hunting groups and resource managers) to identify ways to further avoid, minimize, and mitigate adverse impacts, particularly in the resource areas of aviation safety and subsistence. We also specifically recommend that ALCOM work closely with our agency, as well as the Alaska Department of Conservation, to further minimize potential impacts to physical and biological resources from air emissions and noise, the generation of hazardous wastes, and discharges into waters of the U.S.

Discharges and Hazardous Wastes

We are particularly concerned about possible discharge of live munitions into aquatic environments. Depending on the constituents of the munitions, adverse and potentially lethal impacts, such as those

G0027

seen at Joint Base Elmendorf-Richardson Eagle River Flats, could occur. We recommend that for required live firing training, every effort be made to discharge munitions that do not contain white phosphorus or other constituents that could cause increased mortality in waterfowl similar to what was occurring at Eagle River Flats. Wastewater discharges associated with construction stormwater are included in the discussions of several proposed actions. There does not appear to be discussion of the discharge of munitions, which are also regulated under the National Pollutant Discharge Elimination System. This permit program is scheduled to be transferred from the EPA to the State of Alaska on October 31, 2012, as part of the Phase IV transfer of the Alaska Pollutant Discharge Elimination System. For more information about program transfer, please see the Alaska Pollutant Discharge Elimination System website at <http://dec.alaska.gov/water/APDES/phaseIVextension.html>.

We also recommend that the final EIS include, as applicable, a discussion of Spill Prevention, Control and Countermeasure Plans and Facility Response Plans, as required by the Clean Water Act and the Oil Pollution Act of 1990. Finally, we recommend that the final EIS provide detailed information regarding the anticipated types of hazardous wastes that will be generated as part of the proposed action, how the wastes will be managed, and the plans for disposal in accordance with federal, state and local requirements. The EPA regulates hazardous wastes under Subtitle C of the Resource Conservation and Recovery Act.

Subsistence

To address impacts to subsistence, we recommend further coordination with the Alaska Department of Fish and Game Subsistence Division and Board of Fisheries as well as Federal Subsistence Board to determine if additional measures (such as timing windows, higher minimum altitude) would substantially reduce the potential impacts identified in the EIS, particularly from FOX 3 MOA Expansion, New Paxson MOA and Realistic Live Ordnance Delivery proposed actions.

Aviation

To address the potentially serious impacts to aviation and aviation safety, we encourage you to continue working with commercial and general aviation groups as well as individual owners and operators, and the Airports Divisions within ADOT and FAA to determine if additional avoidance, minimization, or mitigation measures can further reduce impacts, particularly to aviation safety. As identified in the EIS, general and small commercial aviation are critical modes of transportation for communities in rural Alaska, including those identified in the project area. For residents in these communities and in more remote locations, effective communication regarding training activities is often difficult. If information regarding the occurrence and scheduling of such activities is not received by the private operators, or is not timely, safety can be seriously compromised. Therefore, we recommend that work be done to ensure the current effectiveness of the existing Special Use Airspace Information Service that is currently used to inform civilian pilots when MOA and restricted areas are activated. If this information is currently available it should be included in the final EIS. If it is not, we recommend that a study be undertaken to determine its effectiveness. If deficiencies are identified, we recommend that improvements be implemented, preferably before the signing of the Record of Decision.

Cumulative Effects

We recommend that coordination with the Federal Energy Regulatory Commission occur to ensure that the most current proposed activities associated with the Susitna-Watana Hydroelectric Project are considered in the cumulative impacts analysis in the final EIS.

G0027

Adequacy

To improve readability, we recommend a detailed table outlining alternatives for each proposed action and a detailed discussion regarding each alternative by resource. We recognize that such a table with “averaged” impacts is currently included in the Executive Summary, but it is important that the EIS present the “sharp contrast” between alternatives. While the narrative in the effects section does this to a certain extent, a detailed table would be helpful to readers to visually present the information.

We also expect that the final EIS will contain much greater detail regarding aspects such as the locations of facilities, access roads, numbers of aircraft, and estimated acres of impact, as well as discussion of the potential impacts associated with proposed structures and project activities. We are particularly interested in the quality, acreage and functions of waters of the U.S. that will be impacted by the discharge of dredged or fill material, and wastewater discharges. We request that for specific proposals where it is appropriate or feasible, a draft Clean Water Act 404(b)(1) analysis be drafted and included as an appendix to the final EIS. By including this analysis for project-specific EISs, permitting decisions under Section 404 can be coordinated with other agency decisions, including the consideration of whether the proposed discharge would represent the least environmentally damaging practicable alternative.

Currently the criteria being used for the subsistence community analysis appears to be based on an arbitrary racial composition, and it seems to discount the common practice of rural Alaskan residents to rely on subsistence resources. Other factors that contribute to this reliance are proximity to food stores and U.S. Post Offices. We recommend that these additional components be considered for the subsistence analysis in the final EIS. If the final EIS relies on the current criteria, we recommend that the document include a discussion of the basis for these criteria.

Mitigation and Monitoring

We appreciate the inclusion of Appendix K, Mitigations, Best Management Practices, and Standard Operating Procedures. We request that the final EIS include avoidance and mitigation measures (e.g. restrictions to avoid lambing, buffers along Wild and Scenic corridors) identified by the Bureau of Land Management, Alaska Department of Fish and Game, and other agencies responsible for the protection and conservation of public resources in previous and more recent correspondence in response to scoping and review of the draft EIS.

We also recommend that additional information be included in the final EIS to clearly distinguish between those mitigation measures that ALCOM has the authority to implement, and those which it cannot and thus, would require the involvement of other agencies to execute them. We believe this information would be consistent with CEQ's Guidance, *Appropriate Use of Mitigation and Monitoring and Appropriate Use of Findings of No Significant Impact*, issued in January 2011 (http://ceq.hss.doe.gov/current_developments/docs/Mitigation_and_Monitoring_Guidance_14Jan2011.pdf). Finally, and also in line with the mitigation guidance, we recommend that a draft adaptive management plan be identified and included in the final EIS to monitor and ensure the success of future mitigation efforts.

G0027

Again, we appreciate the opportunity to offer comments on the draft EIS and look forward to working with ALCOM on addressing the issues we have identified for the Final EIS. Please contact me at (206) 553-1601 or by electronic mail at reichgott.christine@epa.gov, or Jennifer Curtis of my staff in Anchorage at (907) 271-6324 or curtis.jennifer@epa.gov, with any questions you have regarding our comments.

Sincerely,

Christine B. Reichgott, Manager
Environmental Review and Sediments Management Unit

Enclosure

G0027

**U.S. Environmental Protection Agency Rating System for
Draft Environmental Impact Statements
Definitions and Follow-Up Action***

Environmental Impact of the Action

LO – Lack of Objections

The U.S. Environmental Protection Agency (EPA) review has not identified any potential environmental impacts requiring substantive changes to the proposal. The review may have disclosed opportunities for application of mitigation measures that could be accomplished with no more than minor changes to the proposal.

EC – Environmental Concerns

EPA review has identified environmental impacts that should be avoided in order to fully protect the environment. Corrective measures may require changes to the preferred alternative or application of mitigation measures that can reduce these impacts.

EO – Environmental Objections

EPA review has identified significant environmental impacts that should be avoided in order to provide adequate protection for the environment. Corrective measures may require substantial changes to the preferred alternative or consideration of some other project alternative (including the no-action alternative or a new alternative). EPA intends to work with the lead agency to reduce these impacts.

EU – Environmentally Unsatisfactory

EPA review has identified adverse environmental impacts that are of sufficient magnitude that they are unsatisfactory from the standpoint of public health or welfare or environmental quality. EPA intends to work with the lead agency to reduce these impacts. If the potential unsatisfactory impacts are not corrected at the final EIS stage, this proposal will be recommended for referral to the Council on Environmental Quality (CEQ).

Adequacy of the Impact Statement

Category 1 – Adequate

EPA believes the draft EIS adequately sets forth the environmental impact(s) of the preferred alternative and those of the alternatives reasonably available to the project or action. No further analysis of data collection is necessary, but the reviewer may suggest the addition of clarifying language or information.

Category 2 – Insufficient Information

The draft EIS does not contain sufficient information for EPA to fully assess environmental impacts that should be avoided in order to fully protect the environment, or the EPA reviewer has identified new reasonably available alternatives that are within the spectrum of alternatives analyzed in the draft EIS, which could reduce the environmental impacts of the action. The identified additional information, data, analyses or discussion should be included in the final EIS.

Category 3 – Inadequate

EPA does not believe that the draft EIS adequately assesses potentially significant environmental impacts of the action, or the EPA reviewer has identified new, reasonably available alternatives that are outside of the spectrum of alternatives analyzed in the draft EIS, which should be analyzed in order to reduce the potentially significant environmental impacts. EPA believes that the identified additional information, data, analyses, or discussions are of such a magnitude that they should have full public review at a draft stage. EPA does not believe that the draft EIS is adequate for the purposes of the National Environmental Policy Act and or Section 309 review, and thus should be formally revised and made available for public comment in a supplemental or revised draft EIS. On the basis of the potential significant impacts involved, this proposal could be a candidate for referral to the CEQ.

* From EPA Manual 1640 Policy and Procedures for the Review of Federal Actions Impacting the Environment. February, 1987.

Dear Dr. Jerome Montague,

I am writing this letter to you in order to continue the open communication that we established when we previously met in your office in February 2011. Our Tribal citizens have recently expressed concerns about the US Air Force's airplanes in our area and we have several questions:

- What are the Air Force's lateral boundaries along the river valleys? If your limit is 5,000 feet from ground level, how close are you allowed to be next to a mountain when you are flying in a valley?
- Is the Air Force allowed to fly lower than 5,000 feet if you are flying at a slower speed?
- Is the Air Force currently flying or are you planning to fly unmanned aircraft in the Matanuska Watershed area?

I look forward to your response. If you have any questions or need clarification, you can all me at 907-745-0749. I look forward to working with you.

RE: Joint Pacific Alaska Range Complex – Draft EIS

Dear Lt. Gen. Hoog:

Department of Defense Instruction No. 4710.02, and Executive Order 13175 provides for a protocol and process for meetings and consultation on the development of policies that have implications upon tribes. The Knik Tribal Council formally requests government to government consultations in addressing the tribe's concerns and interests regarding the proposed military operational area expansion to the Joint Pacific Alaska Range Complex.

The Knik Tribal Council has specific concern with the effect of the proposed undertaking upon the tribe's cultural and subsistence resources within the Fox 3 MOA, the Fox 3 MOA Expansion, and the Paxson MOA. The tribe cannot support the proposed expansion without first having the opportunity to participate directly in determining the extent of the project's impact upon the tribe, its lands and the resources that it depends upon. The wildlife in the proposed areas is of significant importance to the tribe and it is our contention that increased military training exercises would impact the migration, production and continued sustainability of the tribe's wildlife resources in these areas.

We are asking to be directly involved in mitigation efforts involving the monitoring of impact to wildlife and how the tribe can participate, both in gathering and collecting the data and information; and in developing the conclusions and findings on the implications to the tribe.

Please work with Richard Porter, Knik Tribal Council Executive Director in implementing our request. His contact information is below.

Sincerely,

Debra Call
President

N.2.3 Non-government Comments in Order by Identifier ID Number

N0001

Submittal ID	Commenter	Title	Organization	Topic List	Comment
N0001	Carl Sieber	Vice Chairman	Alaskan Aviation Safety Foundation	NEPA Process	<p>The Alaskan Aviation Safety Foundation (AASF) respectfully requests an extension of the comment period for submitting comments on the Draft Environmental Impact Statement (DEIS) on the Joint Pacific Alaska Range Complex public noticed on March 30, 2012. We request a total comment period of 120 days from the date of the public notice. The National Environmental Policy Act (NEPA) sets forth specific guidelines and requirements for preparing environmental documents and setting time lines for the public to respond. 40 CFR (§) 1502.7 suggests a final EIS should consist of 150 pages, and proposals of unusual scope or complexity shall normally be less than 300 pages. We expect that this draft document is approximately the same length as we should anticipate for the final. The page count is defined in §1502.10. My computer tells me the JPARC DEIS is 655 pages for the pages meeting the definition in §1502.10 d through g. We also note that the total document including appendices is 1,394 pages. §1506.10 (c) says that the comment period should be not less than 45 days on draft statements, and can be extended to accommodate public comments. The AASF feels that a short extension to 120 days total is reasonable and will not adversely affect the USAF decision making process or schedule. The AASF has tried to assemble comments before the published June 7, 2012 deadline, but find that our volunteers will not be able to meet that deadline. We therefore find it necessary to request a further extension in order to provide meaningful comments. USAF staffs have already publicly acknowledged that this is a complex document, and our volunteers can concur. The Congress of Environmental Quality (CEQ) has offered informal guidance that agencies should offer the public every opportunity to provide comments in order to help agencies such as the USAF to make better decisions. The AASF sincerely hopes that the USAF decision makers concur. Thank you for your consideration, and we look forward to your favorable response.</p>

■ [REDACTED] [REDACTED]

3 MR. RAZO: Good evening. My name is Gregory Razo. I work
4 as a Vice President at Cook Inlet Region, Incorporated. Our
5 company calls itself CIRI. We are the regional Alaska Native
6 corporation for Southcentral Alaska headquartered here in
7 Anchorage. We also are delegated the tribal authority for the
8 Anchorage region.

9 In general our company has had an opportunity to review
10 the Joint Pacific Alaska Range Complex proposal and Draft EIS.
11 We believe that the Joint Pacific Alaska Range Complex allows
12 for unprecedented training opportunities for our war fighters
13 that are not found in any other region of the United States and
14 we encourage the development of the JPARC process.

15 We think that in terms of the work done to date with
16 regard to the six definitive proposals they have adequately
17 addressed the specificity, dependence, definition and ripeness
18 requirements of the EIS and in particular with regard to the
19 programmatic proposals we strongly support programmatic proposal
20 eight, nine and 10 which deal with the proposed Tanana Flats
21 training area roadway access, the proposed joint air ground
22 integration complex and the proposed intermediate staging bases.

23 In reviewing the anticipated environmental impacts from
24 the JPARC proposal we are happy to see that there is determined
25 to be little impact on the subsistence uses of the affected

[REDACTED]

16 For all of those reasons Cook Inlet Region, Incorporated,
17 supports this Draft EIS. Thank you.

Comment(s):

Facts: I am a combat veteran that understands and appreciates the need for enhanced military training -

A half century ago, the military displaced us from our land to create the Mt. Rogers State Game Refuge to create a bombing range.

I have experienced near-miss situations with A-10s in Iowa Ridge Area -

For 3
500 AGL

Paxon
MOA
500 AGL

To create a 500 AGL flight zone, especially in the Paxon MOA, with aircraft much faster than A-10s will be extremely hazardous for local pilot citizens, especially in September.

large waterfowl flocks are also an extreme hazard near Delta & Delta/Tanana Rivers -

Use additional sheets as needed.

Please turn in this form at a public hearing or submit by June 7, 2012, to:
ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506
Fax: 907-552-5411; Email: alcom.j08@elmendorf.af.mil

Thank you for your input.

Subject: JPARCEIS Website Support

To Whom It May Concern,

My name is Melissa Martin, I work in the Air Traffic Division at Aircraft Owners and Pilots Association. I am looking to submit comments on the website, I see that there is an area for written form comments but not a way to attach a document. I have gone ahead and attached AOPAs comments to this email, please provide me with confirmation that it was received/ passed along to the correct person who can address our concerns. If there is another way to attach a document via the website please let me know. Thank you.

Re: AOPA requests for extension of Comment Period for the Draft Environmental Impact Statement for the Joint Pacific Alaska Range Complex

To Whom It May Concern,

The Aircraft Owners and Pilots Association (AOPA), representing more than 400,000 general aviation members nationwide, requests a 60 day extension to the comment period slated to close on June 7, 2012 for the Draft Environmental Impact Statement (DEIS) for the Joint Pacific Alaska Range Complex (JPARC) comment period.

Based on AOPA's participation during recent DEIS public meetings and the complexity of concerns raised by both the aviation industry as well as local communities impacted by the JPARC proposed changes, the current 70 day comment period is inadequate to allow for a comprehensive review and public input. The sheer volume and complexity of the JPARC initiative would typically necessitate a minimum of 90 days for public comment and while recognizing the military's desire to move ahead and remain on schedule, attempting to aggressively move forward without ample public review opportunity seems to negate the true spirit of the National Environmental Policy Act (NEPA).

AOPA strongly suggests the Department of Defense offer an additional 60 days for public review of this complex and lengthy DEIS to ensure the public is offered time to provide substantive comments on the potential consequences of the proposed actions. While understanding the desire to adhere to a schedule and budget, there is no substitute for allowing an adequate and thorough public comment period - especially when the DEIS public comment meetings overlapped with a number of already scheduled community events precluding the public from participation at these public meetings.

AOPA looks forward to an extension of the comment period to allow for a thorough public review opportunity and to allow the aviation community and public to provide substantive feedback on this complex DEIS.

Sincerely,

A handwritten signature in black ink, appearing to read "Heidi J. Williams".

Submittal ID	Commenter	Title	Organization	Topic List	Comment
N0005	John Delaquito	Owner	Lake Louise Lodge	Description of Proposed Actions and Alternatives (DOPAA), Airspace Management, Noise, Safety (Airspace), Safety (Ground), Physical Resources, HAZMAT, Biological Resources, Subsistence, Air Quality, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	I oppose the use of the Fox 3 MOA area for a number of reasons which include the following: 1) The area being requested for the Fox 3 is used by a very large amount of people for fishing and hunting recreation, birdwatching, and residents like myself who live in this area on a full-time basis. 2) This area is easily accessible by people that reside all over the state but many live in close proximity to Anchorage and the Matanuska Valley. It is a popular area for private pilots and small commercial pilots/guides and question the necessity of the additional air space that is being requested. 3) The necessity of the additional area is questioned and it is in fact really needed for training area. The Lake Louise tri-lake area is the largest lake system in Alaska which you can drive to and should be preserved for a recreational location for all residents of the state to enjoy. It would make sense to use a more remote area for this training. Thank you for your consideration in not expanding the air space area. In summary, for the preservation of our tranquil environment, wildlife, and enjoyment of our homes, please do not expand this area for your training.

N0006

10

1 four months.

2 The expand or have a boundary say from the Denali Highway
3 north, Talkeetna, Richardson Highway, use that -- don't use that
4 in the month -- for four or five months out of the year and
5 maintain at least 5,000 feet above with your original MOA. We
6 just don't need the conflict with our revenue, tourism, three
7 major holidays and hunting season. And I do a tremendous amount
8 of flying in the Basin in that time and that's just one more
9 thing I got to watch out for. That's one of our main concerns.

10 But we got a tremendous amount of land here and, again, I
11 don't think we should be whipping around here over the top of
12 everybody's houses, homes, cabins. Call it what you like, but
13 essentially it's going to disrupt a tremendous amount of
14 revenue. Thanks.

1 As I said, I haven't looked deeply into the EIS, but where
2 I have it seems to me to be quite inadequate in spite of its
3 great length. I have the impression that the writers simply had
4 a lack of knowledge of this area and its resources. Probably it
5 was written by those who don't live here in the Basin and if
6 they are living in Alaska haven't been here for a long time and
7 probably won't be here for a long time. I -- we are used to
8 seeing environment impact statements that are written by people
9 who live and work here and they're very different.

10 I want to make an example of the cumulative impact area.
11 With regard to cumulative impacts, I haven't found any mention
12 of the Susitna Dam which would greatly affect this area and our
13 biological resources or recreation. No mention of the mineral
14 exploration and possible development around Tangle Lakes. No
15 mention of biomass harvest, climate change. I did find
16 cumulative impacts regarding the oil pipeline and the gas
17 pipeline, but not with respect to the biological resources, only
18 with respect to some of the other resources.

19 With respect to biological resources, there is a very
20 short paragraph on cumulative impacts with other non-military
21 actions. In other words, how does this proposal relate to
22 things that are going on that are non-military in terms of
23 effects on us. No substantive non-military actions have been
24 identified for the areas under the proposed expanded Fox 3 or
25 Paxson MOAs. Therefore, contributions of non-military actions

5 Biological resources, recreation and subsistence all
6 intermesh. Biological resources are essential to subsistence
7 and to almost all recreation and I think that recognition is
8 lacking in this EIS and it makes for a very confusing document.
9 Thank you for your time and for making this opportunity
10 available.

4 MR. MARTINEK: Yeah, my name is Gary Martinek, M-A-R-T-I-

5 N-E-K. I'm the hatchery manager at Gulkana hatchery, a State

6 facility started in 1973. This is the largest sockeye facility

7 in the world. It's three miles north of Paxson Lodge on a

8 series of springs. The salmon that we provide are basically

9 used for commercial fishing, subsistence, personal use and sport

10 fishery. The upper Copper River is the source of one of the

11 most valuable sockeye and king salmon resources in the state.

12 Besides the hatchery springs, there are over 10 different wild

13 sockeye stocks and at least six different stocks of wild king

14 salmon and the most northern stock of wild rainbows in the

15 United States. Like Luke Catledge mentioned, our single biggest

16 concern is during this window of incubation which is roughly --

17 can be 120 days. These eggs are extremely susceptible to any

18 type of noise or shock and can be killed with just a simple

19 sound of a gunfire in an incubator. And we definitely would

20 like you to relook at this situation. I mean this is a very,

21 very valuable resource to not just people in the state of

22 Alaska, but people world wide. So thank you.

8 MR. CATLEDGE: Thank you. My name is Lucas Catledge, C-A-

9 T-L-E-D-G-E. I work with the Gulkana hatchery here locally and

10 my main concern is probably the sonic booms. And working at the

11 salmon hatchery here in the fall especially when we have eggs

12 loaded in the incubators I see that as a potential threat to the

13 safety of the eggs. They're very susceptible to shock and even

14 at the 5,000 foot a sonic boom will rattle and shake things here

15 on the ground. And fortunately we haven't seen any substantial

16 loss in the past, but I see here on the scheduling for their red

17 flag training exercises that this year's proposed to be August

18 -- or scheduled to be in August and again in October. And that

19 first date, August 6th through the 17th, is when we're first

20 loading eggs into the incubators and they're very fragile until

21 they eye up. That's about two months in time. And so that

22 would extend -- and our main egg take extends into the first

23 part of October often and so the eggs are a very fragile state

24 at the -- at that point. And so like I said, even at 5,000 feet

25 a sonic boom directly over the canyon would be detrimental.

■ [REDACTED]

25 MR. PETERSON: My name is Tony Peterson, P-E-T-E-R-S-O-N.

[REDACTED]

N0010

1 I represent Paxson Lodge. I'm also the President of the
2 Community of Paxson. My concerns mostly are the effect on
3 tourism along with this lodge being as old as it is the sonic
4 booms, the possibility of blowing out windows and guests being
5 in the rooms. If a window was to shatter the impact on that
6 guest as well. These are single pane windows. This lodge is
7 old. It's been here forever. It's been in this area since
8 1904, this lodge has been here since 1946.

9 The hatchery is also a concern. The hatchery provides the
10 salmon not only for this area, but like Gary said, for the
11 entire northeast mar -- or northwest market and around the world
12 actually.

13 The drop in altitude to 500 feet above ground level will
14 also impact the hunting for this area as far as I am concerned
15 and it will also impact the industry that we have where we have
16 people coming to stay here and stay at this lodge and in this
17 area and provide business to not only myself but to Myers (ph)
18 Lake and to Mr. Bakewell's Denali Cabins. This area -- I am --
19 I'm for the military training and having the ability to train
20 and to provide these maneuver -- or to do these maneuvers, but I
21 do not believe that the Paxson area is an area that is
22 susceptible to these maneuvers. There's plenty of area to the
23 north. Expand the Yukon River. Yukon River there is little to
24 no inhabitants. I understand that you need the geographical
25 with the mountains and that for your training, but Pax -- the

11 MR. SCHANDELMEIER: John Schandelmeier, S-C-H-A-N-D-E-L-M-
12 E-I-E-R. I'm chair of the.....

13 UNIDENTIFIED MALE: You need to.....

14 MR. SCHANDELMEIER: Did you get it? You didn't get it?

15 UNIDENTIFIED MALE: (Indiscernible).

16 MR. SCHANDELMEIER: S-C-H-A-N-D-E-L-M-E-I-E-R. I'm a
17 Paxson resident, also a resident McClaron (ph) River, Chair of
18 the Paxson Fish and Game Advisory Committee. And my comments
19 are kind of based on this same thing everybody else is here.
20 It's -- low level training is a negative impact for this area,
21 the whole Nelchina Basin actually. It's the highest use
22 recreational area in the interior of Alaska or one of the
23 highest in southcentral I guess it would be if you want to call
24 it southcentral instead of interior. Seems like could have
25 picked a better area, a lot less impact, lot less controversy.

[REDACTED]

N0011

1 The solution I have if you're stuck on this area is no fly
2 zones, 10 mile radius around Paxson, Tangle Lakes, McClaron (ph)
3 River, wherever else is a concern, wherever there's people. If
4 you have the no fly areas around those it seems like that solves
5 a lot of problems as long as you can keep people out of those
6 areas. And that seems to be a concern because right now
7 Paxson's supposed to have aircraft at 18,000 feet and no lower.
8 We certainly do. We have their right on the deck at times. So
9 like to see that -- some -- the way to monitor that, again, is a
10 no fly zone at all, you don't have to worry about it, their
11 altitude. So that's the solution that I see and other than
12 moving the whole MOA out of here and putting it somewhere else
13 where there's less people that's it. Thank you.

N0012

[REDACTED]

15 MR. PETERSON: Tony Peterson, P-E-T-E-R-S-O-N. Again, I'd
16 like to enforce that I do support the training of our military,
17 but this area -- John Schandelmeier made a great point with a no
18 fly zone for a 10 mile radius. However, the entire Gulkana (ph)
19 River, Gakona (ph), Gulkana (ph), the entire system that is
20 supported not only by the hatchery but the wild sockeye and, as
21 they said, that they are so fragile for that 120 days out of the
22 year even in the wild stock. That loss would be a magnitude
23 that I could pretty much assume would be unimaginable. It would
24 devastate the commercial fishing, it would devastate the
25 personal fishing and it would devastate the subsistence fishing

[REDACTED]

[illegible]

N0013

■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]

5 MR. PETERSON: Tony Peterson. As to the expansion area of
6 MOA 3 Paxson the suggestion would be to put a three mile
7 corridor to the east of the Gakona (ph), Gulkana (ph) River and
8 three miles west of the....

9 UNIDENTIFIED MALE: Now (indiscernible) rivers. They all
10 start (indiscernible).

11 MR. PETERSON: Gakona, Gulkana. And three miles to the
12 east as well with a ceiling of 10,000 feet -- this area would be
13 open to 10,000 feet and above for exercises. The way to
14 designate this as a no fly zone is to put this as a kill zone
15 during activity. If they drop below 10,000 feet in this area,
16 in this no fly zone, then they would be essentially terminated
17 as far as the exercise goes.

13 MR. MULFORD: My name is Robert Mulford, M-U-L-F-O-R-D.
14 I'm a local organizer for Veterans for Peace. In the counsels
15 of government we must guard against the acquisition of
16 unwarranted influence, whether sought or unsought by the
17 military industrial complex. The potential for the disastrous
18 rise of misplaced power exists and will persist. We must never
19 let the weight of combination endanger our liberties and
20 democratic processes. We should take nothing for granted. Only
21 alert and knowledgeable citizenry can compel the proper
22 messaging of the huge industrial military machinery of defense
23 with our peaceful methods and goals so that security and liberty
24 may prosper together. President Dwight David Eisenhower in his
25 farewell address to the nation, January 17th, 1961.

[REDACTED]

N0015

1 I appreciate the courage of you men in uniform. I wore
2 the uniform myself. I was never in combat, but I appreciate
3 your courage. I understand -- I do understand your courage, but
4 I want to speak real briefly about the courage of another man
5 and another type of courage. Three weeks ago I attended a pre
6 court-martial hearing of a young PFC who exhibited a different
7 kind of courage. I only hope that down the road if you men
8 realize -- come to realize that the misplaced power, the
9 disastrous rise of misplaced power is not only a potential, but
10 it exists in these technologies and these policies that are
11 based on these technologies. That you find the courage within
12 yourself to do much the same thing that that brave young PFC,
13 Private Bradley Manning (ph), did and help save this country
14 from this disastrous rise of misplaced power. Thank you.

N0016

10 MR. MCGREGOR: Oh, okay. Dan McGregor, M-C-G-R-E-G-O-R.
11 As we reported, with Denali Air. Primarily focusing concerns on
12 areas basically out the Nenana River Valley and glaciers
13 surrounding the Mount Devera (ph) area. There are right now two
14 main operators that spend a lot of time, but there's more,
15 Atkins Flying Service in different areas, different companies
16 that fly out there with regular routine flights out that area
17 doing landings, being on the glaciers. The concern was low
18 level traffic in that area affecting that commercial status and
19 the ability to make money and of course safety concerns with
20 fast movers and very slow movers, being us, on wheel skis and
21 different things. So I just wanted to mostly go on record that
22 that was brought up in concern.

23 A lot of the areas focus more under the Fox 1 MOA, which
24 is not going to be an issue as long as that surface ceiling goes
25 down to -- or stays above 5,000 AGL. Any change to that in the

N0016

1 Fox 3, that 500 feet. I understand the need for training at
2 that low level and that's of value. It's a drastic change and
3 that's one of the things that concerns us I guess is the severe
4 change in that from 5,000 down to 500. Most of the glaciers
5 that we are flying into are going to be out of that realm, but
6 there are some and there's transit areas where we cross that --
7 through that. It's very difficult without being able to get in
8 contact and alert the MOAs. I think radio repeater -- as I
9 understand it, the radio repeater or the alert systems through
10 the radio traffic is not quite operational yet and the funding
11 is in place, but those aren't at full capacity yet I guess for
12 us to be able to update or get updates on any MOA traffic while
13 we're in the air as far as I understood and I can find out more
14 on that later.

15 But in general I just wanted to have it known that there
16 is commercial traffic out there. We do fly out there regularly
17 and if that is taken into account that would be a good thing to
18 have noted. That's it.

N0017

19 COLONEL WEISS: Thank you very much. Mr. Adam White.

20 MR. WHITE: Thank you. Name is Adam White serving as the
21 President of the Alaska Airmen's Association, last name spelled
22 W-H-I-T-E. First of all, I want to thank the military for your
23 efforts in educating the public. I've learned an awful lot
24 about the way our government operates and this whole NEPA
25 process. Appreciate your patience as you have been educating me

N0017

1 and a lot of our constituents and members and thank you for your
2 efforts and your time for that.

3 A couple of areas that I wanted to comment on tonight.
4 We, especially here north of the Alaska Range, have really
5 appreciated and enjoyed the safety and the peace of mind of
6 having access to the SUAIS Service, the Special Use Airspace
7 Information Service. That has been a tremendous help in us
8 transiting the area that you guys use for your operations. It
9 has helped de-conflict our passage through that area and from
10 what I hear from your direction back towards us you appreciate
11 having the knowledge where we are and when we're going to
12 transit that area.

13 I would like to encourage you to expand that system, and I
14 know that's been talked about, but especially with the proposal
15 for the Fox MOA expansion and the Paxson MOA. The most coverage
16 we could have down there the better and it would -- from our
17 perspective if the coverage is not there or if a certain
18 repeater may be out of service consider mitigations for not
19 using the lower level, lower strata of that airspace when the
20 communications may not be available for any given time. Because
21 we've had such great success with that service we would like to
22 see it implemented actually nationwide to be honest with you.
23 And we know that there's a couple of other areas in the U.S.
24 where they have similar type systems, but knowing the success
25 that we've had here we especially want it implemented statewide

N0017

1 and especially in these lower altitudes where the potential for
2 conflicts exist.

3 One of the things, that as the Airmen's Association we try
4 to make sure that we're up to speed and aware of what's going on
5 not just with this particular procedure and policy change, but
6 with other areas that the military's acting as well as how that
7 interacts with the FAA. And it's not an easy task, but some of
8 the things that we've talked about previously, the moving of the
9 F-16s from Eielson down to JBER and how that might affect some
10 of your proposals and want to make sure that that's at least
11 considered or talked about during some of these areas.

12 Looking at my notes here. As we brought up earlier, with
13 the UAV corridors and the lack of definition from the FAA about
14 your ability to operate these vehicles in the national airspace
15 system, want to make sure that if your proposal for the
16 realistic live ordinance does include connecting R-2211 and R-
17 2202 that you would not be limited to using that airspace for
18 what it was specifically requested for. But since that airspace
19 would potentially be there it would be better to be able to use
20 it for multiple uses, including the UAVs.

21 Question that we also have that -- not sure that it's been
22 dealt with sufficiently is the use of Fort Greely and class
23 delta airspace there with the potential for traffic to possibly
24 decline in that area and the potential for that no longer being
25 a full-time type operations, what would that do for some of the

N0017

1 transit areas through that area as far as general aviation and
2 civilian traffic. One of the things that has been brought up
3 numerous times by our members.....

4 COLONEL WEISS: Sir, you've.....

5 MR. WHITE: Okay.

6 COLONEL WEISS:you've taken up four minutes at
7 least.

8 MR. WHITE: Okay.

9 COLONEL WEISS: (Indiscernible).

10 MR. WHITE: Sorry about that. One of the things that's
11 been brought up by our members is the narrow slot that would be
12 available to transit up the Richardson Highway and the
13 possibility of possibly shaving some of the eastern boundary of
14 2202 if the restricted area is approved over the battle area
15 complex to give us a little more breathing room to transit that
16 area and de-conflict with opposite traffic. That is a heavily
17 traveled area, especially in low weather, because we tend to
18 follow low terrain and we need as much room as we can. Also
19 understanding that if it's bad weather chances of you having
20 live weapons release from an aerial platform in the battle area
21 complex is probably pretty limited.

22 But here again, we're dealing with an education issue of
23 our constituents. They see an area on a map. Unfortunately
24 they don't always research it to the point to realize that it's
25 only activated during certain times and that's an education

N0017

1 issue that we constantly struggle and deal with and ask for your
2 patience on especially.

3 And I guess that concludes my oral statements and
4 encourage you to look for a written statement before the
5 deadline of June 7th. So thank you.

Re: AOPA requests for extension of Comment Period for the Draft Environmental Impact Statement for the Joint Pacific Alaska Range Complex

To Whom It May Concern,

The Aircraft Owners and Pilots Association (AOPA), representing more than 400,000 general aviation members nationwide, requests a 60 day extension to the comment period slated to close on June 7, 2012 for the Draft Environmental Impact Statement (DEIS) for the Joint Pacific Alaska Range Complex (JPARC) comment period.

Based on AOPA's participation during recent DEIS public meetings and the complexity of concerns raised by both the aviation industry as well as local communities impacted by the JPARC proposed changes, the current 70 day comment period is inadequate to allow for a comprehensive review and public input. The sheer volume and complexity of the JPARC initiative would typically necessitate a minimum of 90 days for public comment and while recognizing the military's desire to move ahead and remain on schedule, attempting to aggressively move forward without ample public review opportunity seems to negate the true spirit of the National Environmental Policy Act (NEPA).

AOPA strongly suggests the Department of Defense offer an additional 60 days for public review of this complex and lengthy DEIS to ensure the public is offered time to provide substantive comments on the potential consequences of the proposed actions. While understanding the desire to adhere to a schedule and budget, there is no substitute for allowing an adequate and thorough public comment period - especially when the DEIS public comment meetings overlapped with a number of already scheduled community events precluding the public from participation at these public meetings.

AOPA looks forward to an extension of the comment period to allow for a thorough public review opportunity and to allow the aviation community and public to provide substantive feedback on this complex DEIS.

Sincerely,

Heidi J. Williams

May 10, 2012

Lieutenant General Stephen L. Hoog
Commander, Alaskan Command
9480 Pease Avenue, Suite 110
JBer, AK 99506-2101

Dear Sir:

The Greater Fairbanks Chamber of Commerce (GFCC) would like to respectfully request the extension of the comment period for the Joint Alaska Pacific Range Complex (JPARC) draft Environmental Impact Statement (EIS). We would like to recommend an additional 60 days which will allow for further comments and analysis based on recent USAF proposals and basing decisions at Alaskan installations.

The Air Force, by its force restructuring action, which is not considered in the current EIS draft, of shifting the Eielson F-16s, associated military, and civilian personnel to JBer has created undetermined impacts on Alaskan air space and Alaska's population. These changes are more than sufficient to warrant an extended period for analysis and comment by the local governments, businesses, organizations and individuals potentially affected by, as yet, unidentified impacts on Alaska's land, water and air space.

The GFCC has a longstanding relationship with the military in Alaska and supports the military's involvement in the Interior in several ways. In 2012 the Chamber's Board of Directors and Military Affairs Committee adopted "Continue to Strengthen the Military Presence in Interior Alaska" as one of its most important priorities. We understand the importance and strategic advantage that JPARC offers for a variety of military training opportunities. However, for the reasons stated above we believe this 60 day extension is warranted.

Sincerely,

Lorna Shaw

LAKE LOUISE COMMUNITY
NON-PROFIT CORPORATION

May 30, 2012

To: ALCOM Public Affairs
Subject: MOA Expansion

The Lake Louise Non-Profit Corp. (LLCNPC) represents the 245 homes and cabins in the Tri-Lakes area. With the exception of a few owners, the Community is opposed to the expansion of the FOX 3 and Paxson MOA.

Residents have expressed many different reasons for their opposition: low level military aircraft pose a hazard to civil aircraft, disturbance of nesting birds and waterfowl, disturbance of caribou calving, excess noise, fire hazard, use of State lands when the majority of Alaska land is held by the Federal Government.

The Lake Louise area has been chosen by residents because of its beauty, quiet, clean water, and wildlife. Had they wanted air traffic, their property would have been selected next to an airport.

Five hundred AGL operations are totally unacceptable and the LLCNPC wants to go on record as strongly opposed.

Sincerely,

Beverly Matthews, President

RE: Moderation and Enhancement of Ranges, Airspace, and Training Areas

On behalf of the AmberLake North Homeowner's Association, who won, material sites, for the prosperity of its creation by the DNR, the position is that we object.

We were created for public purpose and mission. We have had past experiences, of being excluded from consistencies reviews in coastal consistencies, due to re-drawn boundaries. We have had plane crashes, not addressed by the DNR, to the satisfaction needed. We can not be subject to political whim, because there is a record establishing the objectionable nature is ruled under a recreational standard, such as when opposing the loss of Oil Well Road, for keeping animals protected in the corridor called Alaska Wild Rivers; before the Alaska legislature (by testimony).

The State has a whistle blower statue, but only for state employees. This makes the EIS deficient on its face, because there are unsettled land claims in our area. If the State has not reconciled, the tentatively transferred federal land to the state, and notices have been ignored because of the whistleblower statue and employees, who do not have confidence in their job security.....the region known as Amberlake/ Amberlake North; humbly respects removal, from your consideration.

Creating titles on non recognized parties, before claims are settled, makes this region unsuitable for your or the nation's needs.

Peer review is deficient under an engineering standard, because this past semester, peer review demonstrated that buildings do not implode by fire intensity, because the quantum physics properties recognize the second property of thermodynamics. That property has fire reversing on its self, and is seen. The necessity does not call for an EIS.

The idea that you can use quantum physics, and I can get academically punished, is ground, to file a complaint. Who am I going to complain to?

When a student desires to know the truth and the truth is structured to support social sciences only, I object under science.

Until the President of the United States decides the land Claim issues, decisions concerning who owns what, will cloud your efforts. I applaud your science, but I am

N0022

2

bound to a rock geology standard, that is suppose to give the prevailing notice or approval. While those who seek to discredit me, my work is on Elmendorf, and Eielson ABF.

Sincerely in objection,
The folks and dissents in the AmberLake/ AmberLake North region

Submittal ID	Commenter	Title	Organization	Topic List	Comment
N0023	Dwayne King	Director	Kingdom Air Corps	1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	<p>We at Kingdom Air Corps, mile 81 on the Glenn Highway are grateful for the opportunity to make comments to the Alaskan Command. We appreciate your desire to get public input, and we hope and pray that you take us very seriously. I have over 15000 hours, and 45 years experience as a commercial pilot and flight instructor in this area of Alaska. Training dozens of people in the Glennallen, Chickaloon, Tok, and Bettles area. We make numerous flights to Fairbanks from our base at AK-59 King Ranch, operating 14 aircraft, 3 turbine helicopters, from our base north toward Fairbanks, Talkeetna and Paxson. My son, David King operates in the Alaska Range, especially in the Tangle Lakes area, with three helicopters, in mining operations. We oppose the expansion of the FOX MOA, because it endangers our people, our business, and our lifestyle. We have managed all of these years to be accident free, but an expansion of the MOAs, puts a greater risk on all of us. We're not authorities in military operations, how can we be experts in military operations? But we think it will be more risky for all of us. And for sure it will change the freedom that we have had all of our lives, hunting, mining, working, and flying in these areas that are proposed to become Military Operations areas. We fought the expansions of Federal lands for Parks, and have seen the encroachment of Federal rules upon us through the years. When we lived in Bettles, we opposed the massive Parks acquisition of The Gates of the Arctic; sitting in meetings and voicing our opinions. The same thing happened to us when we lived in Glennallen for eight years; just at the time the Wrangle-St Elias Park was established. We voiced our opinions and we never really got any good answers. They said it wouldn't effect public flying, but then we began to hear that they complained that we flew below 2000 feet above Park lands. We are the kind of people that are very supportive of our military. We really like the free lifestyle of Alaska. We like our guns, our hunting, flying low, gravel bar-hopping, and flying around the peaks. We take about 300+ people sightseeing at all different altitudes, in the Talkeetna and Chugach Mountains. I can't ever remember getting a response from these comment sections that we fill out. Does it really do any good to fill these out. We know our voices are being heard, but does it make any difference? Please respond. We are people who are seriously impacted by the expansion of military operations. Thank-you for listening, Dwayne King Director Kingdom Air Corps.</p>

June 11, 2012

Lt. General Stephen Hoog
Alaskan Command & Joint Task Force Alaska
9480 Pease Avenue, Suite 107
JBER, AK 99506-2100

Dear Lt. General Hoog:

On behalf of the Alaska Railroad Board of Directors and our employees, I would like to express our support for the continued development and investment in the Joint Pacific Alaska Range Complex (JPARC). The JPARC Draft Environmental Impact Statement (DEIS) is a welcomed next step in a process that we hope will result in enhanced training opportunities for our United States Armed Forces.

As a state-owned corporation, part of the Alaska Railroad's charter is to support economic development and provide critical support services to our military operations. Our current project to build a bridge across the Tanana River near Salcha meets both requirements. This project is phase one of a multi-phased project called the Northern Rail Extension that will eventually build rail to Delta Junction. This will support future resource development, passenger service options for civilians and military personnel, and will connect the Fort Greely Army Installation by rail to all other major military installations and strategic port facilities in Alaska. In the short term, the Tanana Bridge will provide an important year-round transportation land link to the vast military training grounds encompassed in the JPARC area.

We are proud to be constructing a project that represents an important first step in modernizing and enhancing JPARC and we encourage the adoption of alternatives that continue building on this investment. JPARC is the largest military training range in the United States and is critical to securing and defending our nation.

The Alaska Railroad will continue to work with the State of Alaska, the Federal Government, the U.S. Military and the local community to help ensure we are providing the best support possible to the courageous men and women who defend our nation.

Warm Regards,

A handwritten signature in blue ink, appearing to read "Linda Leary".

6/14//12

Dear JPARC Planning Team.

The following comments are submitted by the Alaska Quiet Rights Coalition (AQRC) as testimony concerning the Joint Pacific Alaska Range Complex Modernization and Enhancement Draft EIS, published March 2012.

As stated in the AQRC scoping comment letter of 1/31/11, AQRC is a statewide non-profit organization dedicated to protecting the important resource of natural quiet on our public lands for the benefit of all Alaskans, visitors, wildlife, and future generations. State surveys have shown that the majority of Alaskans cherish the beauty, peace and quiet of wild places, and consider that peace and quiet necessary and important to their lives. Natural Quiet is a natural resource that is an essential ingredient of wild areas.

AQRC reluctantly supports the no-action alternative, but has a strong preference for an alternative that would reduce the size of the existing MOAs, not leave them as they are or increase them. While AQRC is appreciative of the role of the military and the need for training to stay current, the proposal to, once again, expand the already enormous areas of MOAs and increase the training exercises with their accompanying noise, safety, and environmental degradation issues, sacrifices the quality of life that Alaskans cherish. It is also a major threat to wildlife resources.

Human effects:

Low altitudes to 500 feet are not compatible with acceptable civilian quality of life. Both Alternatives A and E include this level which was rejected in the past by both military and civilian reviewers and should be rejected now.

Noise created by military aircraft adversely affects rural and backcountry users. There are all kinds of recreationists along the Richardson and Denali Highways, cabin owners in the Lake Louise area, backpackers in the Talkeetna Mountains and near the Denali Highway, and hunters and fishers throughout the expanded areas being proposed. The mitigation suggestion of publishing times of training missions, as proposed, will not be sufficient to meet their many and varied interests and needs. Further, there are many homes and growing communities along the Glenn and Richardson Highways, and elsewhere in the Copper River Basin that would be negatively affected by either Alternative A or E.

The Draft EIS quotes various standard noise measurements such as the day-night average noise level and the FAA and EPA standards for noise safety. The FAA mission is airplane safety. The EPA standards address noise as it effects physical health. None of this is relevant. As is admitted in Chapter 3, noise is not experienced as an average and noise increase in quiet areas has greater impact than in less quiet areas. The impact of machine or ordnance noise is to remove peace and quiet. The Draft EIS Alternative A indicates that sonic booms would become much more frequent in Fox 3 and "would be expected to be considered significant." (3.1.2) According to the Draft EIS, in Alternative A subsonic noise under the Fox 3 expansion and new Paxson MOA would result in problems. "Overall, the relative (noise)change

N0025

is high, and in quiet settings, these increases would be highly noticeable and cause potentially significant impacts on communities." (3-79)

The Draft EIS describes the expanded Fox 3 and the new Paxson MOA as being over rural and sparsely populated areas, as if that made noise less of a concern. The opposite is true. The very value of those areas are that they are rural and sparsely populated and therefore a resource to be enjoyed and treasured. If the military judges the effect of its actions by the number of people adversely affected, then the judgement being made is that cities are to be saved and wild areas are appropriate sacrifice zones. Many Alaskan civilians see it the other way around. Cities and noise are expanding. Wild areas and natural quiet are shrinking and becoming progressively more valuable. Alaskans live here in this cold dark place because we value the wild and the peace and quiet above all.

Wildlife effects.

As AQRC has stated in the scoping letter, mammal mating, birthing, feeding, resting, and migrating have been shown to be sensitive to stress in different species at different times. Similarly bird mating, nesting, feeding their young, fledging, food storing for migration or winter, migrating or wintering have been shown to be sensitive to stress in different species at different times. Few, if any, windows of opportunity are available when air noise and/or ordnance will not have negative effects on wildlife. The Alaska Department of Fish and Game has written to you with concerns that both the low level flights and the large scale training could disturb all species. (March 1, 2011)

The Draft EIS Alternative maps show extensive overlay of Dall Sheep, Caribou calving, and Trumpeter Swan nesting areas. The EIS claims that effects would be short term based on a few studies in other areas. No reference adequately supports the claim that Alternative A with mitigation would have "moderate effects on wildlife and would not be measurable at the population level and not significant." (3.1.8) No MOA expansion or decrease in flight altitude should occur before specific studies on the effect of various kinds of military noise on moose browsing, Dall sheep lambing in both the Alaska Range and Talkeetna Mountains, caribou calving in the northern Talkeetna Mountains, migration, nesting and fledging of water fowl, including Trumpeter Swan, are done.

For the above reasons, AQRC supports:

- No action alternative.
- No reduction in flight altitude levels.
- No increase in ordnance and training areas.

The perceived need to keep expanding air and training space to keep up with technology never ends. However, our land is finite. When will enough be enough? What volume of civilian outrage is sufficient to stem this inexorable take-over by the military asking itself if it should have more space and answering "More More More."

Sincerely,

Elizabeth Hatton
Alaska Quiet Rights Coalition

Re: Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges,
Airspace and Training areas in the Joint Pacific Alaska Range Complex

To Whom It May Concern:

The Aircraft Owners and Pilots Association (AOPA), representing more than 400,000 members nationwide, submits the following comments in response to the Draft Environmental Impact Statement (DEIS) for the modernization and enhancement of ranges, airspace and training areas in the Joint Pacific Alaska Range Complex (JPARC). The U.S. Department of Defense (DoD) has proposed a significant expansion to the Joint Pacific Alaska Range Complex (JPARC) in support of military training. This complex, already the largest military airspace complex in the country occupies some 65,000 square miles of airspace over land, and 42,000 nautical square miles of airspace over the Gulf of Alaska. A series of proposals are included in the DEIS that would further expand this complex. It is imperative that aviation safety and access be preserved for civil users of the complex, given the importance of aviation for basic transportation in the state of Alaska.

Economic impact of civil aviation in Alaska

According to *The Economic Contribution of the Alaska Aviation Industry to Alaska's Economy*, by Northern Economics, Inc., the aviation industry in Alaska contributes \$3.5 billion, or approximately 8% of the gross state product. The fact that this is proportionately almost 40% greater than the industry's role in the national economy demonstrates the importance of the aviation industry to Alaska's economy. An estimated 47,000 jobs are directly and indirectly related to aviation in the state of Alaska. Given the importance of aviation to the state's economy, it is important that the proposed changes to the airspace do not harm this industry, or significantly limit access to resources in the state.

Proposed MOA Expansion

The proposed expansion of the Fox 3 Military Operations Area (MOA) is a significant increase both in lateral and vertical dimensions, lowering the floor from 5,000 feet above ground level (agl) to 500 feet agl. The area encompassed in the proposed expansion is frequently used by

AIRCRAFT OWNERS AND PILOTS ASSOCIATION

N0026

ALCOM Public Affairs
June 26, 2012
Page 2

general aviation pilots and air taxi operators to support hunting camps and mining operations, conduct air tour operations, access recreational areas or make other uses of this region. Due to its proximity to the population centers of Anchorage, the Mat Su Borough and Fairbanks, where the airspace is heavily used by civil aviation, there would be an increased collision potential with high-speed military aircraft executing training maneuvers in the Fox 3 MOA airspace. Due to the importance of the proposed airspace area for access to the southern Alaska Range, Denali Highway and Talkeetna Mountains, and to minimize the risk of mid-air collision, expansion of the Fox MOA should be limited to no lower than 5,000 feet agl, and to the smallest possible lateral extent to minimize the risk of mid-air collision.

The DEIS includes the proposed Paxson MOA, which covers Isabel Pass and portions of the eastern Alaska Range. The pass is a major Visual Flight Rules (VFR) route which links northern Alaska with south central and south east regions of the state. Along the southern flanks of the Alaska Range are mining operations, recreational cabins, airstrips and lakes which experience high levels of use and are not compatible with high speed, low level military aircraft. While the concept of VFR corridors has been discussed, the variable weather in this area is not conducive to identifying a single corridor which tends to concentrate VFR traffic and increases additional potential for a mid-air collision risk. The proposed Paxson MOA should be limited to high altitude usage only, recognizing the importance of Isabel Pass, and the air traffic routes extending from the interior south to Gulkana and beyond for civil aviation.

Special Use Airspace Information Service Coordination

The creation of the Special Use Airspace Information Service (SUAIS) in the 1990's for portions of the JPARC has had a positive impact on VFR usage of the current airspace complex that extends across an area over 300 miles wide. In areas where there is adequate communication and surveillance, this has greatly improved the situational awareness for both civil and military airspace users. Pilots have reported that in the eastern portions of the complex, communications are not adequate and they are experiencing difficulties with the mix of civil uses and military training activities.

Any expansion of MOA airspace must have accompanying radio coverage, staffing and other elements of the SUAIS infrastructure to allow civil pilots to communicate with Range Control during times that MOAs are active. It is also essential that the tape recorded message broadcast during hours when Range Control is unmanned, be more uniformly broadcast across the JPARC complex. While the current language in the DEIS indicates that "funding will be pursued," given that we still do not have adequate communication in the existing airspace this is not ample assurance that infrastructure will be provided. It is essential that funding be allocated for the addition of radio repeaters, staffing or other infrastructure costs to provide sufficient coverage for any expanded airspace. This infrastructure should be installed and operational before any additional airspace is approved.

IFR Access to MOA airspace

Instrument Flight Rules (IFR) access is essential to improving access and aviation safety between Alaska's communities, including those that are under the MOA airspace already contained within the JPARC. Expansion of T-Routes and WAAS approaches are providing this

N0026

ALCOM Public Affairs
June 26, 2012
Page 3

access under a wider range of weather conditions, adding to the benefits of the IFR system. Those benefits are seriously degraded by expansions of MOAs that preclude IFR access for all but emergency or Lifeguard flights. AOPA requests that no additional MOA airspace be added to this complex until provisions are made to provide real-time IFR access through active MOAs. While the access may be restricted to limited flight altitudes, it is essential that civil traffic, both emergency and routine, have access to communities both inside and adjacent to MOA airspace given the critical role aviation plays in the Alaskan transportation system. For example, an aircraft needing to fly from Fairbanks to Tok would normally make a relatively direct 158 nautical mile flight along the airways. When the Delta MOAs are active, aircraft are re-routed, increasing the distance around the airspace to 450 nautical miles, a 2.8 times increase in distance. Due to the huge size of this MOA complex, lacking the ability to cross them using the protections of the IFR system is a significant safety as well as economic impact on the aircraft operators, and the customers that pay for the increased operational cost.

The relatively low volumes of IFR operations suggest that the impact to military training of supporting IFR access would be minimal. As more military actions across the globe are conducted around civil flight operations, learning how to dynamically allocate airspace will also help the military "train like they fight." The JPARC provides an ideal test bed to develop this capability, which will require cooperation with the FAA and military agencies.

Proposed Battle Area Complex Restricted Area

The proposal to establish restricted airspace over the Battle Area Complex southeast of Delta Junction is of particular concern to the civil aviation community. Existing Restricted Area 2202 to the west already forces civil traffic out of the most desirable terrain route to and from Isabel Pass, a major VFR corridor connecting the northern half of the state to south central and south eastern Alaska. Winds and highly variable weather associated with the Alaska Range and the mountain pass make it impractical to confine civil traffic to a single, narrow corridor in this area.

AOPA opposes the addition of restricted airspace as proposed in this area, given the need to access the mountain pass, unique weather and terrain, and presence of existing restricted airspace. We suggest the military seek other means to allow training to take place, such as the controlled firing area used today, where firing is halted when a civil aircraft enters the area.

Realistic Live Ordinance Delivery

The proposals to establish restricted airspace for live ordinance delivery impact access between Fairbanks, Delta, the Richardson Highway corridor and the recreational and mineralized areas in the Alaska Range to the south. Existing Restricted Areas R2211 and R-2202 already inhibit air traffic attempting to transit the airspace. Connecting these two restricted areas would create an overall barrier to access in this area; AOPA would like to see effective mitigation to address these concerns.

Remotely Piloted Aircraft/Unmanned Aerial Vehicle corridors

The DEIS proposes establishing restricted airspace corridors for the purpose of navigating Remotely Piloted Aircraft (RPA)/Unmanned Aerial Vehicles (UAV) from military airfields into various restricted airspace areas. There is no doubt that unmanned aerial vehicles play an

N0026

ALCOM Public Affairs
June 26, 2012
Page 4

important role in today's military, and that training is required. Integrating these vehicles into the National Airspace System is currently a topic of discussion at the national level. Restricting civil airspace to accommodate UAV transits next to the second largest air transportation hub in the state is a concern for the civil aviation community.

The FAA has consistently denied the addition of new restricted airspace areas for the sole purpose of RPA/UAV operations or for anything other than hazardous activity since Restricted airspace is for containment of hazardous operations. En-route RPA/UAV flights transitioning between the Eielson Air Force base and existing restricted airspace is not a hazardous operation. The proposed establishment of restricted airspace corridors for this purpose is an attempt to circumnavigate the RPAs/UAVs inability to see-and-avoid participating traffic. While awaiting development of a true sense-and-avoid capability that will allow full integration of unmanned aerial vehicles into the National Airspace System, we must rely on other means to separate unmanned from manned aircraft without segregated airspace. The corridors that are proposed would clearly interfere with the safe and efficient access between Fairbanks, the Richardson Highway Corridor and the Alaska Range.

F-16 Relocation Proposal

While not identified in the JPARC Draft EIS, announcements in the press have communicated an Air Force plan to relocate the F-16 squadron, currently based at Eielson Air Force Base in support of military training activities, to Joint Base Elmendorf Richardson (JBER). The stated purpose of the proposed move is to reduce operating costs. Statements in the Draft EIS indicate that part of the justification for expanding the FOX MOA airspace to the south, is to reduce operational costs of training exercises, by lowering the amount of fuel required to reach the training airspace from JBER. These two statements seem to be in conflict with one another. It is also not clear what the impact of relocation of the F-16 squadron might have on airspace and the corresponding civil facilities in Anchorage, including Anchorage International Airport.

Given the conflicting nature of these two military proposals, it appears that the F-16 relocation cannot help but influence the cumulative impact of the overall JPARC proposal. More analysis of this plan by the military with presentation to the public is required to understand the true impact on this development to allow informed public comment.

Fifth Generation Fighter Jet Statement Inconsistent

AOPA has concerns with a portion of the JPARC document "description of proposed action and alternatives", Section 2.0, 2.1.1 Fox 3 MOA Expansion and New Paxson MOA which states, "...as the fifth generation of U.S. fighters (F-22 and F-35 aircraft) are developed, fielded and deployed in combat, pilots will need to train in the skills and tactics appropriate for these aircraft within an airspace best configured for such training." This statement is in direct contrast with the United States Air Force (USAF) F35A Training Basing EIS, Airspace and Range Use, F-35A, which states, "...flight activities would take place in existing airspace; no airspace modifications would be required for any of the scenarios."

It remains unclear whether the USAF is stating that the addition of fifth generation type fighters require additional airspace accommodations or they will be contained in existing airspace.

N0026

ALCOM Public Affairs
June 26, 2012
Page 5

AOPA would welcome clarification on this issue as these two USAF documents appear to be in conflict with one another. With the national implications inherent in this debate, AOPA opposes the creation of additional Special Use Airspace to accommodate new aircraft without further consideration of a “giveback” of airspace no longer needed.

Evaluation of other Alaska MOAs

While the DEIS proposals focus on expansion of the airspace in the core area centered on Eielson AFB, there are historical MOAs in other parts of the state that are defined as elements of the JPARC. Given the emphasis on reduction of operating costs, this is an appropriate time to evaluate the present uses of the Stony, Naknek, Susitna and Galena MOAs to determine if they are still required to meet modern training needs. No data was found in the DEIS on uses of these MOAs other than limited use data on the Stony MOA.

AOPA would ask the DoD to perform an analysis of existing and future uses of Stony, Naknek, Susitna, and Galena MOAs as part of JPARC to establish their continued need given the changes in training requirements, and need for operational efficiency described in these proposals. Results should be included in the final JPARC Environmental Impact Statement and shared with the public with an opportunity for comment.

Summary

AOPA appreciates the opportunity to submit comments on the DEIS for the JPARC and looks forward to working with the DoD on solutions that equitably accommodate both the military’s need for realistic training, and the needs of the civil aviation community.

We urge the military to work collaboratively with the aviation community on plans that incorporate more effective IFR coordination for transit through active MOAs and more reliable SUAIS implementation. Finally, we implore you to keep in mind that airspace, especially in the Alaskan Frontier, is the lynchpin that enables many small communities to exist. Any alteration to this vital resource must be approached with the utmost caution. Thank you and please contact me with questions you may have.

Sincerely,

Melissa McCaffrey

PUBLIC COMMENT
MODERNIZATION AND ENHANCEMENT
DRAFT ENVIRONMENTAL IMPACT STATEMENT
JOINT PACIFIC ALASKA RANGE COMPLEX

7/4/12

BOARD OF DIRECTORS
ALASKA SURVIVAL
[REDACTED]

Alaska Survival is a Talkeetna-based nonprofit Alaskan corporation that seeks to protect the health of both people and the natural ecosystem by endeavoring to maintain the integrity of Alaska's land, air, and waters.

THE NO ACTION ALTERNATIVE: THE ONLY REASONABLE ALTERNATIVE

The JPARC military representatives have said that they cannot consider the No Action Alternative. Page 6 of the DEIS says that the status quo is not good enough for the modern and emerging weapons. There is no proof for this assumption beyond what JPARC says.

At the Talkeetna public meeting, we were told that if this expansion is accepted that there would be 2 supersonic sorties a day, 5 days a week with the potential for increased supersonic flights during training periods with other military from other countries. This will irrevocably change the public lands, the environment and the quality of life for those areas. People outside the areas will hear the sonic booms.

The April, 1997, Record of Decision for the final EIS for the Alaska Military Operations Areas diminished the Fox MOA by 910 square miles to its present location and raised the proposed minimum flight altitude from 3000 feet AGL to 5000 feet AGL due to undesirable noise impacts and to preclude the potential for direct over flight of sensitive resources. These were sensible decisions and should be retained as the status quo.

Much of the existing Fox 3 and proposed expansion is within the Mat Su Borough (MSB). The MSB is the fastest growing area in Alaska with the population expecting to double in the next 20-25 years. The expansion of Fox 3 and the creation of Paxson MOA would expand military operations southerly including the Talkeetna Mountains which are adjacent to the growing communities of Lake Louise, Wasilla, Palmer, Sutton, Chickaloon, and Glacier View. The Lake Louise area has approximately 80 year round residents with about 500 private

N0027

property parcels. To do good planning, it must be assumed that these parcels will be occupied year round in the future.

We support the Lake Louise Community Non Profit Corporation and the Talkeetna Community Council in their concerns of the noise impacts on the local economy, lifestyle, wildlife, recreational use, and civilian aviation.

In the 15 years since the last EIS, the civilian use of the air and ground space in the Fox 3 and Paxson MOAs has significantly increased. There is more public use of the air space and the military must take this into consideration. These 2 areas are the breadbasket of Alaska, the heart of valuable natural resources that make Alaska what it is. Pristine public land, fish and wildlife resources, remote wilderness lifestyles, hunting, fishing, recreating, subsistence uses. This is what makes Alaska what it is. This is threatened by anything than the No Action Alternative.

SUPPORT MSB RESOLUTION 12-076

This Resolution was passed unanimously by the Borough Assembly 6/28/12, and it states our concerns succinctly.

Many MSB residents and visitors depend upon the airspace within the proposed expanded airspace for accessing the natural resource rich lands and waters below, for accessing private and public lands via aircraft, for commercial enterprise such as air taxi operations, outfitting, hunter/hiker guiding, operating lodges, operating mines, and for various non-commercial, recreation, and subsistence activities, such as hunting, hiking, food gathering, sightseeing.

The proposed airspace expansion would cover the Nelchina caribou herd calving grounds located within the MSB and the important Dall sheep lambing area/important ewe/lamb habitat in the Black Rapids Glacier and Mountain areas.

The proposed lateral and vertical expansions would increase the probability of conflict between civilian and military aircraft. The potential for near misses or midair collisions is significant and will impact general aviation pilots, air taxi pilots, and air charter pilots who use these areas for hunting, fishing and other recreational and subsistence activities traveling at low altitudes under Visual Flight Rules.

General aviation, air taxi, and air charter pilots flying under Instrument Flight Rules conditions would be prohibited from travel through an active MOA. The Richardson Highway is a major aviation transportation corridor for civil aviation traveling north-south.

N0027

We agree with the MSB Assembly that the minimum flight training altitude should NOT be lowered to 500 feet for the Fox 3/Paxson MOA's due to potential impacts on wildlife, civilian aircraft traffic and recreational uses. In these MOA's, the Air Force must conduct all supersonic operations at or above 5,000 feet AGL or 12,000 feet MSL whichever is higher in order to reduce sonic boom intensity and its effects on the surface.

The Department of Defense must delineate and establish seasonal flight avoidance areas and overflight/operational restrictions over wildlife areas underlying any new or expanded MOAs consistent with the current restriction identified in the 1997 Alaska MOA EIS. These restrictions would include, but not be limited to, minimum overflight altitudes over wildlife areas, including waterfowl, raptor and other migratory bird nesting/breeding/concentration areas, Dall sheep lambing areas, caribou and moose critical season habitat areas. These should be reviewed, identified and expanded if necessary with the assistance of the Alaska Department of Fish and Game and the US Fish and Wildlife Service.

Time and area restrictions must be evaluated and established to ensure the public's use of the area and the sustainability of the natural resources. There should be NO Major Flying Exercises and overflight of popular subsistence areas, hunting, areas, campgrounds and trails (5000 feet AGL and half-mile lateral distance) during peak use periods between June 27-July 11, mid-August through September, and during other important hunting seasons determined by the Alaska Department of Fish and Game.

There must be detailed maps, aeronautical charts and information to the public especially in the communities near Fox 3 and Paxson MOA's that identifies flight corridors, restricted or closure areas and dates of training use.

CUMULATIVE IMPACTS

We disagree with the statement on page 13 of DEIS that the cumulative noise impacts that would occur where the twelve JPARC proposed action overlap would not be significant and would not create disproportionately high and adverse environmental or health effects. There is no data supporting this statement. We disagree with the statement on page 14 that no significant restriction to subsistence resources are expected from the cumulative effects of the JPARC proposed action, other DoD actions, and non-DoD actions.

There are 3 current and proposed actions and 1 legislatively designated area that did not make it to your list of cumulative impacts in the DEIS and must be considered.

3

N0027

Proposed Susitna-Watana Hydroelectric Project

This is a megaproject that would develop a large footprint in the Fox 3 MOA. It is proposed to build a 700 to 880 foot dam at River Mile 184 of the Susitna River. There would be a permanent airport and a permanent road built. During the construction of the proposed project, there would be many airplane flights bringing workers and equipment into the area. In the next three years, there will be over 50 studies done in the area as part of the Federal Energy Regulatory Commission Licensing process and the NEPA process. The reservoir will be approximately 40 miles long by 2 miles wide and will be a focal point for increased human presence in the project area.

Mineral Exploration/Production in Fox 3 and Paxson MOA

There is active mineral exploration on claims by the company Pure Nickel's Man Alaska Project (2009-2014). These are 240 miles of claims on state land called the Denali Block as well as some on the federal Bureau of Land Management land. The production could be open pit or underground mining. Both methods involve waste rock dumps, tailing stacks and ponds, toxic dust from ore trucks, mine drainage, transmission lines, and access roads. This mineral exploration affects the same migratory wildlife, and the same recreational and subsistence resources of the JPARC expansion DEIS and has its own air and noise pollution negative impacts.

Denali Air Special Recreational Use Permit

Denali Air is requesting to be able to conduct scenic glacier landings by fixed-wing aircraft near Mt. Deborah on portions of the Yanert and Gillian Glaciers, with up to three departures daily from May 10 to October 10. Currently, BLM is conducting an Environmental Assessment.

Nelchina Public Use Area (NPUA)

The NPUA encompasses 2.5 million acres of state land in the Talkeetna Mountains and was established by the state legislature in 1985. AS 41.23.010 states that the mandate is to protect, perpetuate, and enhance the fish and wildlife habitat and the public enjoyment of such habitat by the activities of fishing, hunting, trapping, recreation, and additional public uses. In particular, the Nelchina Caribou calving grounds, trumpeter swan nesting areas, and habitats for Dall sheep and brown bear are to be protected. Under AS 41.23.020, the Alaska Department of Natural Resources is directed to adopt a management plan, but this has never been done. It has been managed for

4

N0027

multiple-use under the guidelines of the 1985 Susitna Area Plan and now under the 2010 Susitna Matanuska Area Plan, currently under appeal.

Not enough attention is being given to the proposed JPARC expansion on this this legislatively designated area, which is vulnerable to project impacts because there is no specific management plan. This needs to be considered.

CONCLUSION

For all of the above reasons, we support the No Action Alternative, the status quo with the caveats discussed in these comments. We do NOT want Alaskan lives and lands to become a live-virtual-constructive range. This expansion creates a war zone type atmosphere in a state that treasures the pristine and spectacular public lands that underlie the expanded Fox 3 MOA and the creation of a new Paxson MOA.

Submittal ID	Commenter	Title	Organization	Topic List	Comment
N0029	Arthur Hussey	President	General Aviation Association of Fairbanks International Airport	General (to the EIS), Airspace Management, Safety (Airspace), Infrastructure and Transportation, All proposed actions	<p>The General Aviation Association of Fairbanks International Airport works with approximately sixty pilots and businesses in promotion of general aviation in and around the Fairbanks International Airport area. In this context, we are pleased to submit comments on the proposed JPARC expansion. Key points of concern to our membership include: a) in light of the proposed relocation of fighters from Eielson to JBER, the expansion should be re-evaluated. It is likely that training requirements for Eielson based aircraft and airmen would substantially change if the relocation were to occur. b) The EIS should strongly re-examine the possibility of expanded SUAIS. This is needed because of the increased low level traffic the JPARC envisions, combined with frequent slow-moving VFR traffic in the area. c) The floors for the Fox MOAs should be re-examined, and lifted from the 500 feet proposed to at least 2,000 feet. It should be noted that flight, even VFR flight, at less than 500 feet, as would be needed to remain away from active military operations, is hazardous and in some cases could be deemed illegal. d) UAV Corridors, while understandable for increasingly common UAVs, should not be constructed in such a manner as to significantly restrict access of general aviation aircraft, both VFR and IFR, to Fairbanks airport. It should be noted that there is significant General Aviation traffic on the east-west axis and that the UAV corridors, as proposed, would restrict that, placing higher requirements on fuel to be carried (due to more circuitous routings) or potentially reducing safety margins. e) Finally, the proposed Battle Area Restricted Area is of significant concern. As anyone familiar with the area knows, this Restricted Area would occur in a region of potentially high winds and varying visibilities. To confine the general aviation community to a single north south corridor could easily compromise safety. We ask that this new Restricted Area be dropped from consideration. In closing, the General Aviation Community appreciates the opportunity to comment on the EIS and looks forward to continued partnership with the military and other parties involved in this important discussion. Sincerely, Arthur Hussey President General Aviation Association of Fairbanks International Airport</p>

RE: Comments on Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement
– Draft Environmental Impact Statement

To Whom It May Concern:

Thank you for the opportunity to comment on this important proposal to expand the Joint Pacific Alaska Range Complex (JPARC). The members of the Alaska Miners Association will be severely impacted by this proposal.

The Alaska Miners Association is a non-profit membership organization established in 1939 to represent the mining industry in Alaska. The AMA is composed of more than 1400 individual prospectors, geologists and engineers, vendors, suction dredge miners, small family mines, junior mining companies, and major mining companies. Our members look for and produce gold, silver, platinum, molybdenum, diamonds, lead, zinc, copper, coal, limestone, sand and gravel, crushed stone, armor rock, and other materials. Our members live and work throughout the state including much of the area covered by the proposed expansion of JPARC.

We are pleased with some of the changes that have been made over previous alternatives but the current proposals DO NOT address the concerns expressed in AMA's letter of March 4, 2011 submitted during the scoping period for the DEIS. AMA noted that "Expansion of restricted airspace will greatly complicate the ability to develop mineral resources on state, borough, federal, and private lands, including Native owned lands. Much of the region covered by JPARC alternatives is remote and is accessible only by air." With the current DEIS proposal this statement should be changed to read "... will effectively close some State of Alaska lands to any use, including exploration and mining." Also, the DEIS does not adequately recognize the conflicts between low-level high speed military aircraft and helicopters and fixed wing aircraft used to access remote exploration and mining properties. The proposed changes in the DEIS will result in significant conflicts regarding access to and use of mineral lands. The DEIS significantly underestimates the potential conflicts and the impact on mining.

Specific comments and recommendations:

1. **Maximize the use of airspace above the 60% of Alaska that is federal land.** This recommendation was made in the AMA March 4, 2011 letter but we can discern no attempt to consider this approach. Most of the land under the proposed new and expanded MOAs is state owned and currently available for mineral exploration and development and much of this land has mineral potential and/or active mineral exploration and development.

The Alaska Statehood Act promised the State it could select and receive title to approximately 104 million acres out of the 365 million total acres in the State. However, before the State could complete its selections, Congress passed the Alaska National Interest Lands Conservation Act (ANILCA) which placed more than 100 million acres in federal Conservation System Units (CSUs) which included parks, preserves, refuges, monuments, "Wildernesses", wild and scenic rivers, etc. This Act removed these lands from the opportunity for selection by the state and removed them from all commercial development, including resource development. Much of

N0030

these lands were highly prospective for mineral development. The current JAPARC DEIS would eliminate mineral development on portions of the now State-owned land that was not taken by ANILCA.

MOAs could readily be defined to overlay non-multiple use federal lands that are now in federal CSUs and this should be the very first step prior to expansion of any MOA or Restricted airspace.

2. Use a minimum 3,000 feet AGL base for military aircraft operating in Military Operations Areas (MOAs). The proposed 500 feet AGL would be unsafe and such restrictions would nearly eliminate the ability for exploration or for mining companies to access their claims or conduct mineral exploration using aircraft. Generally, mining companies operate their aircraft above 1000 feet AGL for safety and to minimize impacts on wildlife and other users. A 3000 foot AGL lower limit for military aircraft would provide a separation safety zone and reduce impacts on wildlife and other users.

Expansion of Fox 3 MOA to include a larger area and much lower altitudes would be a huge problem for the mineral industry. The current Fox 3 MOA primarily overlays the Alaska Range and Denali Highway from west of Tangle Lakes to near Cantwell and has a base of 5,000 feet AGL. The proposed geographic expansion would extend south to include much of the Talkeetna Mountains and east to encompass an area east of Tangle Lakes. The proposal would lower the entire expanded MOA to include the airspace down to 500 feet AGL. The expansion would encompass areas with previous mining and much of the 260 sqmi of mining claims that makeup the M.A.N. project. This project north and west of Paxson has received several \$10s of millions of exploration investment over the past 15 years and drilling continues today as this letter is being written.

The New Paxson MOA would extend east from the expanded Fox MOA to include the Richardson Highway corridor (including Isabel Pass) down to 500 feet AGL. This MOA includes much of the Alaska Range East of the Richardson Highway to approximately Mt. Kimball, including the Slate Creek (Upper Chistochina) mineral district. There is past mining in this area and there are currently several major exploration projects working here. To impose an MOA with a 500 foot AGL base would be a significant hardship for exploration and development.

The only feasible and environmentally acceptable access to most of the Fox 3 MOA and the Paxson MOA for exploration work is by helicopter and fixed wing aircraft.

3. The Special Use Airspace Information System (SUAIS) should be expanded to include the Fox 3 and proposed Paxson MOA and all other MOAs in the state.

4. Expansion of Realistic Live Ordnance Delivery (RLOD) must not be over State-owned lands. Currently these activities occur on and over federal land controlled by Department of Defense (DoD). The proposals include expanding RLOD areas onto a considerable acreage of state lands and some BLM lands not currently under DoD control. These lands are open to mining and under Alternative A include a small, active mining in the Portage Creek area in Little Delta River drainage. RLOD requires that lands included "safety controls necessary to exclude nonparticipating persons and aircraft from the WDZ when ordnance delivery training is taking place in the range training area and the associated air and ground surface areas are active". The areas would be used and the restrictions would be in place for "90 to 150" days (see page 2-10).

N0030

Under DEIS Alternative A, the area of state lands subject to these restrictions is 163,000 acres (page 3-144) located Northwest of the Oklahoma Impact Area in the Donnelly Training Area (described in the DEIS as the expansion of Restricted Area 2202 to include underlying lands). As noted above, this area includes a number of state mining claims. Under Alternative B, 234,600 acres of state land are subject to restrictions, including an almost continuous strip of state land between the Tanana Flats Training Area (R-2211) and the Donnelly Training Area Fort Greeley (R-2202). If these restrictions were in place for 90 – 150 days, they would effectively eliminate other uses of these state lands, and specifically mineral exploration and mining. If the area was closed 150 days of the year, it would be impossible to conduct exploration or mining on the claims. If a mining operation did operate in this area, it would repeatedly be forced to suspend operations and evacuate workers which would be totally impractical. The Environmental Consequences section of the DEIS (Section 3.2) does not address this impact on mining. The proposal would preclude current mining and no new mining operations would be possible on this state land. This should have been assessed in Section 3.2.10.3.1.

5. Restricted airspace corridors for Unmanned Aerial Vehicles (UAV) must not extend lower than 3,000 feet AGL. The DEIS proposes to establish corridors where non-military aircraft would be prohibited (Restricted Airspace) when they are being used for UAVs. Several of these corridors bisect, and therefore would block, corridors commonly used by small aircraft, such as a corridor between Eielson AFB and the Tanana Flats Training Area (R-2211), Fort Wainwright to R-2211, and from R-2205 (Yukon Training Area) to R-2002 (Donnelly Training Area), all of which cross both the Richardson Highway and the Tanana River southeast of Fairbanks. The Corridors from Fort Wainwright to the Yukon Training Area (R-2205) and from R-2211 to R-2202 would also impact small aircraft traveling east and southeast of Fairbanks. According to Table 2-15, the corridors would be used approximately 238 days annually (2/3 of the year) and generally between 7 AM and 7 PM, Monday through Friday. The corridors are proposed to be 5 or 8 miles wide and from 1,200 feet AGL to 17,999 feet MSL.

These corridors would directly impact mining operations such as flights from Fairbanks to the Pogo Mine and flights from Fairbanks to the Fortymile Mining District. These Restricted Areas, when active, could result in very lengthy detours, at a minimum adding significant time and costs, and in marginal weather, creating a safety hazard by forcing pilots to deviate significantly from the most direct routes and often to fly over more remote areas and higher terrain to reach their destinations.

6. The Governor of Alaska, the Alaska Congressional Delegation and the Millennium Safety Foundation should be petitioned to get the Federal Aviation Administration (FAA) to formally define “see and avoid”. A definition for what is meant by this term would eliminate the need for Restrictive airspace corridors for UAV operations. This is clearly the simplest solution for this problem.

7. Establish a 3,000 feet AGL base for the expansion of R-2205 (Yukon Training Area). This proposed expansion would establish restricted airspace from Eielson AFB to the existing restricted area R-2205 that overlies part of the Yukon Training Area. This alone would be a major problem, even if the UAV corridors were not established. The cumulative impact of the expansion of R-2205 and the proposed UAV corridors would be to restrict aircraft from traveling up and down the Tanana Valley.

8. The restricted area proposed between the training area and Fort Greeley must have a base of on not lower than 3,000 feet AGL. General aviation must have the ability to fly the road system from the Glennallen north through the Delta Junction area and on to Fairbanks without

N0030

encountering a restricted area. Inclement weather is often present in this area, especially between Glennallen and Delta Junction and not allow pilots to fly this route is guaranteed to result in the deaths of many Alaskans when they must fly other more dangerous routes.

Thank you for the opportunity to comment on this important issue. The Alaska Miners Association supports our military (a large percentage of our members are military veterans) and recognizes the need for realistic training but this training can be accomplished as we have recommended without compromising the limited areas of this state that are still open to mineral development.

Sincerely,

Deantha Crockett
Executive Director

N0031	Rodney Arno	Executive Director	Alaska Outdoor Council	General (to the EIS), Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA	<p>ALASKA OUTDOOR COUNCIL and Alaska Fish & Wildlife Conservation Fund 310 K Street, Suite 200 Anchorage, Alaska 99501 (907) 264-6645 aoc@alaskaoutdoorcouncil.com</p> <p>July 9, 2012</p> <p>Lt. General Stephen L. Hoog Commander, Alaska Command 9480 Pease Avenue, Suite 110 JBER, AK 99506-2101</p> <p>SUBJECT: Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement DRAFT Environmental Impact Statement (DEIS)</p> <p>RE: Alaska Outdoor Council (AOC) comments on (JPARC) Modernization and Enhancement (DEIS) Dear</p> <p>Lt. General Hoog:</p> <p>As Executive Director of the Alaska Outdoor Council (AOC) I have reviewed the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement DRAFT Environmental Impact Statement (DEIS) and attended a number of public and an individual meeting hosted by very knowledgeable JPARC staff. The Alaska Outdoor Council (AOC) is a statewide organization made up of individual members and clubs that hunt, trap, fish, and recreate outdoors primarily on public lands and waters. AOC represents over 10,000 Alaskans in the regulatory process regarding access to public lands, waters, and renewable resources that they depend on. AOC, and its parent organizations, has advocated for equal access by the public to public resources in Alaska since before Alaskan Statehood was approved by the US Congress and signed into law. In the past AOC has worked cooperatively with the military regarding access within and over Military Operation Areas and weapons transfer across military lands. During the JPARC DEIS public process, AOC found the military staff involved with this project to be genuinely interested in informing the public. The willingness to extend the original comment period deadline is an example of how JPARC was making sure all Alaskans who may feel they could be impacted by the expansion of military training operations could have their concerns addressed. AOC thanks you for the extra time to comments and the additional information we received on the DEIS.</p>

N0031

N0031

AOC offers the following comments regarding Subsistence Resources as they relate to proposed action #1. Fox 3 MOA Expansion and New Paxson MOA:

- The DEIS violates Title VIII of ANILCA by using race as a factor to determine dependence of federally qualified communities who hunt, trap, fish, and gather vegetation within the Fox 3 MOA and newly proposed Paxson MOA. The history of ANILCA clearly states a position of race neutrality regarding a priority to public resources. An evaluation of possible restrictions on subsistence uses by all federally qualified communities is required by ANILCA 810(a), not just the villages selected in Table 3-24.
- The DEIS fails to consider adverse impacts on subsistence uses of thousands of Alaskans (average 3,500 licensed hunters annually) who qualify under AS 16.05.258 as subsistence users on State and private lands in the Fox 3 MOA (GMU 13B - 1,428,519 acres of State land, 28,917 acres of private lands. GMU 13A - 2,519,061 acres of State land, 152,282 acres of private land) and newly proposed Paxson MOA (788,082 acres of State land, 330,927 acres of private lands). State and private lands are by far the major land owners under the Fox 3 MOA and proposed Paxson MOA.
- The DEIS fails to report Alaskan resident hunter participation in GMU 13. 5,015 hunters reported hunting moose in GMU 13 in 2010. 4,887 hunters reported hunting Nelchina caribou in 2010, ADF&G harvest data. The population of individual Alaskans living in subsistence communities in the vicinity of the proposed expansion of MOA (Table 3-24, JPARC DEIS) total 1,506 Alaskan residents. The final ROD on the JPARC Modernization and Enhancement should account for impacts to all subsistence users under both federal, ANILCA Title VIII and State subsistence laws, AS 16.05.258, not just the 1,506 subsistence users listed in JPARC DEIS Table 3-24. AOC offers the following comments regarding Biological Resources as they relate to proposed action #1. Fox 3 MOA Expansion and New Paxson MOA:

N0031

• Biological resources are currently being managed for an abundant harvestable surplus of moose and caribou by ADF&G. The availability of moose and caribou directly impacts thousands of Alaskan families who choose to make gathering a wildfood harvest part of their sustenance. Fox 3 MOA and the proposed expansion plus the newly created Paxson MOA is airspace over one of the few areas in Alaska where predator/prey management under State law, AS 16.05.255(e) – (g), can be successfully conducted. The final ROD on the JPARC Modernization and Enhancement proposed action #1. Fox 3 MOA Expansion and New Paxson MOA should take into consideration the fact that biological resource enhancement programs are not allowed by federal land managers in the vicinity of the proposed action. Federal land managers continue to reduce the areas where the State may conduct predator/prey management, which makes any adverse impact on biological resources where the state can still manage for abundant harvest that much more of value to Alaskans.

The expansion of Fox 3 MOA and the addition of the proposed Paxson MOA in combination with the lowering of the AGL down to 500 feet has the potential to negatively impact a large number of Alaskans who hunt, trap, fish, and recreate via snowmachine, ATV, boat, or aircraft throughout the year in the proposed area. AOC does not want to see folk's use of public resources on public lands underlying this proposed action diminished by proposed military activities. AOC strongly supports the military presents in Alaska and hopes to work toward continuing our public access to lands under MOAs.

Sincerely,

Rod Arno Executive Director, Alaska Outdoor Council (907) 841-6849

Dear Madam or Sir:

The Fairbanks International Airport Operators Council (AOC) is comprised of managers, directors, and owners of businesses and organizations conducting business at Fairbanks International Airport and in the Fairbanks aviation community. The AOC consortium includes representatives from airline and regional air carriers, ground handling services, commuter and air taxi services, local tour companies and advocates for interests in the private aviation community. We have participated in the JPARC public meetings held in Fairbanks, and based on our analysis of the Draft EIS document, would like to comments concerning the proposals.

Economic impact of the airport on Fairbanks and Fairbanks North Star Borough is significant. As second busiest passenger airport in the state, the airport serves as a hub for more than 50 communities in northern Alaska, with an estimated expenditure of \$261 million annually in wages, capital and operating expenses. It is an economic engine for the community and the state, resulting in over 2,000 jobs, primarily in the Fairbanks North Star Borough, according to a State of Alaska study conducted by Northern Economics. The ability to maintain, or grow this engine, is directly impacted by the ability of air traffic to reach the airport thorough surrounding airspace. Given this back ground, several proposed changes to airspace described in the JPARC Draft EIS are of concern.

IFR Access to MOAs

The FAA is working to expand and enhance the IFR infrastructure in Alaska. GPS based IFR routes are being developed, and access to rural communities is being enhanced with the addition of WAAS approaches. We have already seen impacts with the recent implementation of the Delta MOAs, which block V-444 between Fairbanks, Delta Junction and communities to the south and east. Additions to MOA airspace, specifically by the proposed Paxson MOA, would further limit IFR access, when active. This is directly in conflict with the efforts to improve safety and access thorough expanding IFR infrastructure. It is essential to develop procedures between the FAA and the military, to provide real-time IFR access to MOAs, at least for limited flight altitudes, to assure routine IFR access between Fairbanks and the surrounding communities. This not only impacts the air taxi or small commuter operators that provide service, but it also impacts the larger air carriers that those commuter flights need to connect with to efficiently move passengers and cargo to more distant locations inside and outside the state. No additional MOA airspace should be established without provisions for real-time IFR access.

N0032**UAV Corridors**

The JPARC proposes establishment of corridors for UAV access to restricted areas south and east of Fairbanks, including the use of Restricted Airspace to establish these corridors. Restricting airspace across important civil traffic corridors (including IFR airways), has a direct negative impact on access to Fairbanks International Airport. Other means that do not include segregated airspace must be found that do not restrict access, or compromise safety, with civil aviation arriving or departing from Fairbanks International Airport.

Restricted Areas

Several proposals seek to add restricted airspace south and east of Fairbanks. The Realistic Live Ordinance Delivery has an alternative that would link the existing Restricted Areas 2211 and 2202, forming a barrier to civil traffic headed into the Alaska Range from Fairbanks, Delta Junction and the Richardson Highway corridor. We opposed restricting that access to mining, hunting and recreational areas in the Alaska Range. Similarly, the proposal to establish restricted airspace over the Battle Area Complex near Delta Junction also impacts access to Isabel Pass, a major civil aviation corridor between the interior and south central Alaska. Restricting access to these areas again has an impact as many of these flights either depart from or arrive at Fairbanks International Airport.

F-16 Relocation

Not addressed in the JPARC Draft EIS is the recently proposed relocation of the F-16 aircraft based at Eielson to Joint Base Elmendorf Richardson (JBER). This change would undoubtedly impact the already very busy airspace in the Anchorage area, including Anchorage International Airport. Fairbanks and Anchorage airports are part of a system. We would like to see an analysis of this proposal, to understand the potential impacts of the planned F-16 move on the JPARC proposals.

We recognize the value of military training, and understand these activities can have a positive impact on the Fairbanks area. Our interest is in working with the military and FAA to identify mitigations that allow this training to continue, without negatively impacting the activities at Fairbanks International Airport.

Sincerely,

Cory Christian, President
FAI Airport Operators Council

To Whom it May Concern,

Ahtna Incorporated is supportive of the military's effort to enhance and upgrade the military's technological capabilities and weaponry for combat preparation. We appreciate and honor all of the servicemen and women who serve our country. Our Ahtna People have and continue to proudly serve in the military. We are proud of our armed forces, and indebted to them. Unfortunately, Ahtna Incorporated has some concerns with the preliminary JPARC Environmental Impact Statement.

Section 3.1.9 Cultural Resources page 3-53: In Appendix B Definition of the Resources and Regulatory Setting, section B.9 the definition is given as follows: Cultural resources are prehistoric and historic sites, buildings, districts, or objects that are important to a culture or community for scientific, traditional, religious or other purposes. Cultural resources are generally divided into six categories: archeological resources, architectural resources, traditional cultural properties, cultural landscapes, National Historic Landmarks, and National Monuments.

Traditional cultural properties are properties, sites, or other resources associated with the cultural practices and beliefs of a living community that link the community to the past and help maintain its cultural identity and are listed or eligible for listing on the National Register. Traditional cultural resources are areas associated with the cultural practices and beliefs of a living community that link the community to its past and help maintain its cultural identity that have not been evaluated for National Register eligibility. Sacred sites are well-known areas associated with cultural practices or beliefs of a living community. Most traditional cultural properties, resources, or sacred sites in Alaska are associated with Alaska Natives. Traditional cultural properties or resources can include archeological resources, locations of prehistoric or historic events, sacred areas, sources of raw materials used in manufacture of tools and sacred objects, certain plants, or traditional hunting and gathering areas. Both historic properties and significant traditional resources identified by Alaska Natives are evaluated for potential adverse impacts of action.

On page 3-50, under the title Traditional Cultural Properties and Alaska Native Concern, there is the following statement: **There are no Alaska Native tribes within this area**, but there

N0033

are scattered remote residences. **There are no properties of traditional religious and cultural importance known to be located within the area. This needs to be corrected.**

Ahtna Incorporated is one of the 13 Alaskan regional Native corporations. The Ahtna traditional territory stretches from Cantwell across the Alaska Range through Paxson to the Mentasta Mountains. The territory continues south through the Susitna River headwaters to the Chugiak Mountains, east to the Wrangell Mountains, and west to the Talkeetna Mountains. The territory encompasses the entire length to the Copper River from the headwaters to Woods Canyon south of Chitina (Attachment A). The Ahtna people have used and occupied this land for 5000 to 7000 years (USDA–NRCS 1999). **Department of Defense Instruction number 4710.02 Enclosure 2 section E2.1 states “As tribal boundaries have shifted and tribes have migrated, tribes that seem far removed geographically may have a traditional interest in assets and action at specific, present day installations.”** The entire proposed Fox 3 MOA expansion lies entirely within the Ahtna people’s traditional territory. The majority of the proposed Paxson MOA lies within this territory as well (Kari 2010).

Ahtna Incorporated is comprised of eight villages: Cantwell, Chistochina, Chitina, Copper Center, Gakona, Gulkana, Mentasta and Tazlina. Each of these villages has a village council which is recognized as its own tribe by the United States government. Each of these villages was contacted by letter, by the United States Air force through the Alaska Command (ALCOM) concerning the JPARC proposal. The ALCOM has also had two meetings with Ahtna Incorporated in regards to the JPARC proposal.

Paragraph 4 section 3.1.9.31 Environmental Consequences Alternative A states: In compliance with Section 106 of the National Historic Preservation Act (NHPA), ALCOM, on behalf of the Air Force, has completed consultation with the Alaska State Historic Preservation Office (SHPO) and determined that no historic properties will be affected by implementation of the proposed action. Consultation with potentially affected Alaska Native tribes, Alaska Native Claims Settlement Act (ANSCA) corporations, and Tribal government entities regarding ALCOM’s finding of no historic properties affected is ongoing. In accordance with AFI 32-7065, all NHPA Section 106 consultation will be completed, unless circumstances prevent it, prior to finalizing the EIS and signing the ROD. **By your own words and actions in this section you acknowledge the Ahtna tribes in the region.**

Under ANSCA section 14 (h) (1) Regional Native Corporations have the right to receive title from the federal government to existing cemetery sites and historical places. Currently, Ahtna has on file with BLM ten applications for 14 (h) (1) sites within the Fox 3 MOA expansion area. All ten sites have been examined by a Bureau of Indian Affairs (BIA) archeologist and each site received a Certificate of Eligibility. Ahtna Incorporated hopes the protection of the Tangle Lakes Archeological District (VanderHock 2011) is also taken into account. It appears to be a logical conclusion that air traffic and sonic booms should not have a significant impact on these sites. **The fact remains that these sites need to be acknowledged in your report.**

Section 3.1.8 Biological Resources page 3-38: Under section 3.1.8.1 Affected Environment, the vegetation cover is described as: shrub communities of willow (*salix* spp.), birch (*Betula* spp.), and alder (*Alnus* spp.) occupy lower slopes and valley bottoms. Forests are rare and

N0033

confined to low-elevation drainages (Nowacki 1995). The Copper River Basin ecoregion, which underlies the southwestern portion of the expanded Fox 3 MOA and proposed Paxson MOA, is a large wetland complex underlain by thin to moderate thick permafrost and pockmarked with thaw lakes and ponds. A mix of low shrubs and black spruce (*Picea mariana*) forests and woodlands grows in the wet organic soils. Cottonwood (*Populus* spp.), willow, and alder line rivers and streams as they braid or meander across the basin.

The paper cited in this paragraph by Nowacki is not listed in your references. A Google search of the authors name provided contact information at the USDA Forest Service. Personal correspondence with Mr. Nowacki revealed that the paper cited was an earlier version of an effort to map the ecosystems of Alaska. The newest version was published in 2003. It is a combined effort of the National Park Service, USDA Forest Service, U.S. Geological Survey, and Alaska Biological Research, Inc.

According to this paper, the Fox 3 MOA, the Fox 3 MOA expansion, and the proposed Paxson MOA lie within the Alaska Range Transitional Division (Spencer *et al*, 2003). The description given of this area is "boreal forests distributed in the valleys and lowlands of the division, but wildfire and permafrost have much influence on vegetation. Soils in the mountainous units of the Alaska Range and Lime Hills are generally thin, rocky, and cold, with scattered pockets of permafrost. The Copper Basin floor is formed of interleaved lacustrine deposits, glacial material, and volcanic debris that form fine-grained saturated soils with ice-rich permafrost. The basin support Boreal vegetation patterns, with white spruce and birch on higher ground and black spruce, low shrubs, sedges and mosses growing in wetlands. White spruce and balsam poplar form successional stands along the rivers. The lower slopes of the Talkeetna Mountains are cover with dense thickets of alder that transition to low shrubs in the sub-alpine and blueberry rich alpine tundra. Vegetation of all types succumbs to the harsh conditions at about 4000 feet, leaving the higher area to bare rock, talus (broken loose bedrock), and ice."

The soil surveys for the Copper River area, the Gulkana River describe the cover type as boreal forest. Species composition in boreal forest is determined by wildfire frequency. Wildfire frequency, intensity, and distribution create a mosaic of species across the landscape (USDA 1991). The Soils of the Gulkana Area list 47 different forest cover types (Clark and Kautz 1999). The Soils of the Copper River Area list five forest cover types: black spruce, white spruce-quaking aspen, white spruce-paper birch, white spruce-quaking aspen-balsam poplar, and white spruce-black spruce (USDA 1999). White spruce, aspen, and balsam poplar grow on soils with no permafrost (National Park Service 2012). **The area of the Fox 3 MOA expansion and the new Paxson MOA is an incredibly rich and varied ecosystem and not just black spruce and wetlands. This ecosystem supports Ahtna's year round subsistence resources.**

Boreal forests are a wildfire ecosystem. The largest wildfires in acreage are cause by lightning strikes, while most small acreage fires are human caused. Wildfires create a mosaic of vegetation types across the landscape of different stages of succession (Johnson *et al*. 2001). Fuel moisture and fuel load are the two largest factors determining fire intensity (Ross *et al*. 2001). The boreal forest contained in the proposed Fox 3 MOA expansion and Paxson MOA are particularly prone to intense wildfires. In the 1990's there was an intense spruce beetle, *Dendroctonus rufipennus*, infestation. Several million acres of spruce trees were killed in this

N0033

decade long outbreak. The Copper River Basin was one of the areas heavily impacted by this infestation. There are still many tens of thousands of beetle killed, standing dead trees within the Copper River Basin (USDA 1997). These standing dead trees are susceptible to torching, where the fire quickly travels up the stem of the tree to the crown. If the wind is blowing the fire can quickly spread to neighboring live trees (USDA 2001).

Much of the proposed areas have forest cover types of 1) white spruce, *Picea glauca*, 2) mixed white spruce/ black spruce, *Picea mariana*, and 3) black spruce cover type (USDA 1999). These forest types are especially vulnerable to wildfire. This is because of the low moisture content of the leaves compared to deciduous tree, and the presence of dead retained lower branches that is conducive to torching. Black spruce is particularly highly flammable (Chapin et al. 2008).

Finally, heavy wildfire suppression since the 1950 has resulted to excessive fuel loads in the boreal forest. Fire suppression has increased landscape flammability. This is of particular concern because of climate shift in the last decade due to global warming. This volatility is of great concern around local communities (Chapin et al 2008).

The use of the Chaff & Flare defensive flares over the boreal forest is a great concern to Ahtna Incorporated. In **Chapter 3.0 Affected Environment and Environmental Consequence** it is stated that 1) there will be altitude restrictions of 5000 feet AGL from June through September, and 2000 feet AGL for the rest of the year. 2) It also states that the defensive flare is composed of small pellets of highly flammable material that burn rapidly at extremely high temperatures. It burns completely within approximately 3.5 seconds, or approximately 400 to 500 feet from the release point. **There are no independent studies to measure the chance of igniting a wildfire in this highly flammable landscape. What measures will the Air force take to ensure that a wild fire will not be ignited? What measures will the Air Force take if they do ignite a wildfire? Who will be responsible for putting the wildfire out? State and Federal agencies will not suppress fires in areas with possible live ordinance present. One of the papers in your references section (Air Force 1997) Use of flares will be suspended when warranted by the fire condition code. Who determines the fire conditions?**

In the **environmental consequences section 3.1.8.3.1** there is a discussion on chaff and flare use. It says "extensive studies of chaff particles and defensive flare constituents have found no negative impacts on biological resources. There is nothing cited here. You can't make a statement like that and not back it up. A study was located in the references (Air Force 1997). The Air Force study says that fire danger assessment will be addressed by using BEHAVE, a predictive fire model. Then the paper goes on to say "Although the study examined fire history data from various locations for correlations between level of flare use, method of flare employment, environmental conditions, and fire occurrence, no correlation could be derived at a statistically valid level." **In short, the Air Force has no idea how chaff and flare will affect the probability of starting a wild fire. There are no independent studies of chaff and flare devices cited.**

The Environmental Effects of Self-Protection Chaff and Flare Final Report states "information from range personnel and investigative reports for specific fires indicates that fire

N0033

from flares have occurred, even in areas where minimum release altitude is 5000 feet AGL. Specifically, one fire in Meadow Valley, which burned 21,600 acres in 1993, was attributed to flare use according to a BLM fire investigator."

The Alaska Interagency Fire Management plan (1987) provides for a natural fire regime in unit 13 for the purpose of wildlife habitat enhancement. This plan provides for small scale fires in the area. Caribou will not return to a burn area for 50 years. It is important to create a mosaic of landscape types for optimum wildlife habitat (Schwanke 2010). Ahtna Incorporated feels that the possibility of chaff & flare cause wild fires will disrupt this management plan. The Air Force's own report supports the fact that chaff and flare can trigger large acreage fires.

Section 3.1.8.1 Continued. The EIS acknowledges the fact that "caribou habitat underlies most of the airspace, with summer range and calving habitat underlying the central and western parts of the airspace and winter habitat under both the eastern and western portions." **This is not just "caribou habitat". This is the Nelchina Caribou Herd range.**

The Nelchina Caribou herd (NCH) population fluctuates between 35,000 to 40,000 animals. It has a migratory range that stretches from north of Tok on the Eagle highway to their calving grounds north of Eureka and west of Lake Louise. After the calving season they disperse throughout Unit 13, and conversely throughout most of the proposed Fox 3 MOA expansion, and the proposed Paxson MOA. This is the most road and off road vehicle accessible caribou herd in Alaska. People from Kenai, Soldotna, Anchorage, Wasilla, Palmer, Chickaloon, Sutton, Eureka, Mendotna, Tolsona, Glenallen, Valdez, Chitina, McCarthy, Copper Center, Tazlina, Glennallen, Gulkana, Gakona, Sourdough, Paxson, Delta, Chistochina, Mentasta, Tok, Tetlin, Dot Lake, Healy Lake and Tanacross depend on this herd for sustenance (Alaska Division of Fish & Game (ADFG), 2008). Harvest records from 1998 to 2010 show an average of 3,023 animals are harvested from this herd annually. There are four years that the harvest was between 4,500 and 5,800 caribou harvested (Schwanke, 2010). ADFG manages the herd to supply from 2000 to 4000 animals a year (ADFG 2008). **In 1997 there were 13,612 hunters registered for the Tier 1 hunt of the NCH. In 1996 there were 19,397 registered hunters (Fall & Simeone 2010). Though these numbers reflect the peak number of hunters since 1990, they do demonstrate the intense hunting pressures the NCH is under.**

The NCH has been intensely managed by ADFG since the 1950's. The management objective is to maintain the herd population from 35,000 to 40,000 animals. The ratio between bull to cow management objective is 40 bulls to 100 cows. The tools that ADFG use to manage for these objectives are 1) annual population counts by fixed wing aircraft and helicopter, 2) an active wolf control program, and 3) harvest quotas from several state and federal hunts, and the Ahtna Community Hunt (ADFG 2008). Limiting the flights into game unit 13 will reduce the ability to accurately assess population numbers of the NCH. **This will lower the available caribou for annual harvest, as ADFG will have to be more conservative in order to ensure management objectives (Schwanke 2012).**

Section 3.1.8.3.1 Environmental Consequences Alternative A: In this section it is stated that: Wildlife species would be exposed to over flight by military aircraft flying as low as 500 feet above ground level (AGL), potentially causing altered behavior or metabolic effects. Additionally,

N0033

high speed maneuvers within the proposed air space would create sonic booms, and training would incorporate use of chaff & flares, as defensive measures. Behavioral responses to over flights of 500 feet AGL and above are generally characterized for wildlife species, including various ungulate species, as minor and include individuals assuming an alert posture, rising, walking, or running short distances. Few studies have evaluated the effect of military over flights on moose; several have studied the effect on caribou.”

The paper cited as to behavioral responses to over flights (Lawler *et al.* 2005) only studies the short term effect on caribou by over flights and sonic booms of A-10, F-15, and F-16 aircraft. **There is no study cited about over flights and sonic booms of the F-22 and F-35 aircrafts.** Additionally, another paper cited about the short term effects on caribou (Manci *et al.* 1988) states that “escape and strong panic reactions were observed in 65 to 75% of all groups to over flights of fixed wing aircraft up to 500 feet AGL. Groups consisting primarily of cows, calves and yearlings tended to show a stronger response to the aircraft than groups of bulls.” The paper goes on to state that **“Little is known of the long term effect of noise on the physiology of wild ungulates.”**

Other studies have been undertaken to understand caribou responses to human disturbances. Wolfe *et al.* in 2000 reports that **“Individuals and groups of caribou move away from point sources of disturbance, increase activity and energy expenditure near disturbance, and shift away from areas of extensive and intensive development.”** Cameron *et al.* in 1992 report that **caribou herds on the North Slope of Alaska shifted their calving grounds in response to oil field development.** Initially the caribou chose to calf near the coast where predators were few. As development increased they shifted the calving ground away from the development. The area the caribou now calf in has increased predation pressure on the calves. Whitten 2001 reported to the House Committee on Resources that **caribou calving areas are considered to be critical habitats.** Oil development of the Arctic National Wildlife Refuge was halted because the primary area sought for development lay within the calving grounds of the Porcupine Caribou herd. “This large, migratory herd moves between the U.S. and Canada and is vital to the traditional subsistence cultures of numerous Native villages in both countries.” ADFG 2008 reported that the Delta Caribou herd moved their calving grounds from north of the Alaska Range (pre-Fox 3 MOA) to south of the Alaska Range (post-Fox 3 MOA). **“No information was found in the literature describing startle effects of chaff on wildlife” (Air Force 1997).**

Discussion of the noise levels created by the sonic booms is addressed in Section 3.1.2.3.1 **Noise Environment Consequences Alternative A:** All subdivisions of the proposed Fox 3 MOA as well as the new Paxson MOA would have an established minimum flight altitude at 500 feet AGL. Subsonic aircraft noise levels beneath the Paxson MOA/ATCCAA would increase from 37 to 54 dB Ldnmr. Noise levels beneath all subunits of the expanded Fox 3 MOA would increase from 39 dB Ldnmr to 54 dB Ldnmr. Air craft would fly at lower altitudes as a result of “floor: altitude decrease. Decreasing altitudes would result in increased individual over flight noise events.”

The definition of what dB Ldnmr is lacking in this draft EIS. Consulting the Eglin Air Force Base EIS (Appendix E Noise) gives this definition: **Onset-rate Adjusted Monthly Day-Night Average Sound Level.** This average decibel calculation is worthless when taking into account 500 foot AGL over flights with accompanying sonic booms. Caribou do not care about averages. The

N0033

in the moment experience is what will cause the startle reaction in caribou. An F-15 aircraft creates a sonic boom of 3.92 pounds per square foot and 139.6 decibels at 100 feet AGL (Hamby 2004). An internet search of various blog sites from around Air Force bases deploying F-35s say that its sonic boom is much, much louder than an F-15. They all ask the same question: What is the decibel level of the sonic boom for an F-22 and F-35? The Air Force has not published what the sonic boom decibel level for F-22 and F-35 aircraft is. **Ahtna Incorporated would like to know what the decibel levels of the sonic booms created by these aircraft at 500 feet AGL, at 1000 feet AGL, at 2000 feet AGL, and at 5000 feet AGL.**

Section 3.1.13.2 Subsistence Impact Assessment Methodology: Your assessment methodology is inadequate in at least 3 ways. **First, limiting the subsistence analysis to the eight communities within 20 nautical miles of the MOAs does not accurately represent patterns of resource use and distribution in the Nelchina Basin/Copper Basin area.** Many communities beyond those addressed in the analysis rely on resources in the impacted areas and consequently will be negatively impacted by the proposed actions. Resources are spread across the landscape, and local residents go to where the resources are. Sometimes that means driving substantial distances in order to put food on the table and fill the freezer. The analysis should be expanded to incorporate the Alaska Board of Game Findings (Attachment B) along with those communities with a positive Customary and Traditional (C & T) use determination under the Federal Subsistence Program for moose, caribou or both on lands within the proposed Fox 3 expansion and Paxson MOA as discussed in the EIS. Both the Board of Game Findings and the C & T determinations are based on analysis of all available data regarding patterns of resource use, and provide a more realistic basis for identifying impacted communities than the 20 nautical mile rule.

Second, 20-plus year old community harvest data is woefully inadequate for making decisions that affect people's livelihoods. For example, in the 1980s, when many of those studies were done, Copper Basin residents could harvest caribou in Unit 11. That area is now closed to the harvest of caribou, due to conservation concerns. There is increased reliance on caribou hunting opportunities in Unit 13, which underlies the proposed Fox 3 MOA expansion and Paxson MOA. To people familiar with this data, the "most representative year" referred to in the analysis is identifiable as the most recent year for which a comprehensive subsistence survey data are available. JPARC should follow the lead of the Alaska Gas Line Pipeline Project and base its analysis on updated comprehensive community subsistence data, providing funding to support updated surveys as needed.

As a first step, the list of potentially affected communities (as discussed above) should be examined in terms of when the most recent comprehensive harvest survey took place and whether an update is scheduled in the next year or two. For those potentially affected communities that are five or more years out from the most recent update and are not on the list for an update, funding should go to the Alaska Department of Fish & Game Subsistence Division, or a similarly qualified independent organization to collect this information. **A decision on the project should be delayed until up to date subsistence information for the potentially affected communities can be incorporated into the subsistence impact assessment.**

Third, limiting the communities with high dependence on subsistence to only those with a majority (>50%) Alaska Native population fails to recognize patterns of residence by the Ahtna

N0033

people in the Copper Basin communities, or the importance of subsistence to other local residents. While it is appropriate for predominantly Alaska Native communities to fall in the “high dependence” category, there are other rural communities in the area that should also be classified as such. Indeed, some of the Ahtna villages with federally recognized tribal governments were excluded from the “high dependence” category because the percentage of Alaska Native residents, while significant, does not reach the 50% level. Once up to date information is obtained regarding harvest and use of subsistence resources (as described in the previous paragraph), this question should be revisited for all potentially affected communities. **Communities in which 80% or more of households reporting using subsistence resources should be classified as “high dependence” regardless of community composition.**

ADFG Board of Game Findings #2006-170-BOG has established Ahtna’s Customary and Traditional Use rights in Game Management 13 for Moose and Caribou regardless of village affiliation or proximity to a money economy. Customary and Tradition uses of moose and caribou in Game Management Units 11, 12, and 13 are administered the ADFG Community Hunt (Attachments C & D). **This entire section needs to be re-examined using the correct sources for your assessment.**

Although the ANILCA section 810 analysis is mentioned, it is not completed. Issues that need to be addressed are 1) The effect of use, occupancy, or disposition on subsistence uses and needs, 2) The availability of other lands for the purpose sought to be achieved, 3) Cumulative effects resulting in reductions in the availability of resources used in subsistence purposes, caused by alteration of their normal locations, migration, and distribution patterns. Please refer to comments on sections 3.1.8.3.1 and 3.1.2.3.1 when completing the 810 analysis. A new section that systematically analyses the impact of the proposed actions regarding the expanded Fox 3 MOA & Paxson MOA on subsistence resources needs to be added to the EIS.

Ahtna Incorporated feels strongly that the proposed Fox 3 MOA expansion and proposed new Paxson MOA would have adverse effects on our Customary and Traditional Subsistence uses in these areas. Ahtna feels the proposed mitigation measures in the EIS are inadequate.

Government to Government Consultation: Executive Order (EO) 13175 November 9, 2000: There several mandates in this EO that have not been adequately addressed.

- 1) Section 1 Definitions (a): ‘Policies that have tribal implications’ refers to regulations, legislative comments or proposed legislation, and other policy statements or actions **that have substantial direct effects on one or more Indian Tribes.**
- 2) Section 1 Definitions (b): ‘Indian Tribe’ means an Indian of Alaska Native Tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian tribe pursuant to the **Federally Recognized Tribe List Act of 1994. 25 U.S.C. 479a.**
- 3) Section 2 Fundamental Principles (a): The United States has a **unique legal relationship with Indian tribe governments as set forth in the Constitution or the United States, treaties, statutes, Executive Orders, and court decisions. Since the formation of the Union, the United States has recognized Indian Tribes as domestic dependent nations**

N0033

under its protection. The Federal Government has enacted numerous statutes and promulgated regulations that establish a trust relationship with Indian tribes.

- 4) Section 2 Fundamental Principles (b): **Indian tribes exercise inherent sovereign powers over their member and territories.**
- 5) Section 3 Policy Making Criteria (a): **Agencies shall respect Indian tribal self-government and sovereignty, honor tribal treaty and other rights; and strive to meet responsibilities that arise from the unique legal relationship between the Federal Government and Indian tribal governments.**
- 6) Section 5 Consultation (a): **Each agency shall have an accountable process to ensure meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications.**
- 7) Section 5 Consultation (b)(2)(B): To the extent practicable and permitted by law, no agency shall promulgate any regulation that has tribal implications and that preempts tribal law unless the agency, prior to formal promulgation of the regulation,
 - a. **consulted with tribal officials early in the process of developing the proposed regulation.**
 - b. **In a separately identified portion of the preamble to the regulation as it is to be issued in the Federal Register, provides the Director of the OMB a tribal summary impact statement, which consists of a description of the extent of the agencies prior consultation with tribal officials, a summary of the nature of their concerns and the agency's position supporting the need to issue the regulation, and a statement of the extent to which the concerns of the tribal officials have been met.**

To date, the only contact from the Department of Defense to the tribes of Cantwell, Chistochina, Chitina, Copper Center, Gakona, Gulkana, Mentasta and Tazlina has been a form letter to only some of these tribes. There were also two meetings with Ahtna Incorporated. The first meeting was approximately forty five minutes long. The second meeting was approximately one and a half hours in length. **Ahtna Incorporated feels that there is a long way to go in meeting the obligations set forth in Executive Order 13175 in regards to Government to Government Consultation. Where is the tribal summary impact statement?**

Department of Defense Instruction Number 4710.02 DoD Interactions with Federally Recognized Tribes: There are several instructions set forth in this document that Ahtna Incorporated believes have not been adequately addressed.

- 1) Section 6.1 Procedures: The DoD Components shall consult with tribes whenever proposing an action **that may have the potential to significantly affect protected tribal resources, tribal rights or tribal lands.**
- 2) Section 6.3 Procedures: Consultation required by paragraphs 6.1 and 6.2 shall apply to proposed actions **that may have the potential to significantly affect tribes, including, but not limited to: land disturbing activities, construction, training, over-flights, management of properties of traditional religious and cultural importance, protection of sacred sites from vandalism and other damage, access to sacred sites, access to treaty**

N0033

reserved resources, disposition of cultural items in accordance with reference (k), and land use decisions.

- 3) Section 6.4 Procedures: The DoD Components shall afford tribes that have a cultural or historical affiliation with the lands encompassed by the installation an opportunity to consult on the development of the Integrated Cultural Resources Management Plan (ICRMP), **and where tribal treaty rights or other rights to natural resources potentially may be affected, Integrated Natural Resources Management Plans (INRMPs).**
- 4) The DoD Components shall involve tribal governments early in the planning process for proposed actions that may have the potential to affect protected tribal rights, land, or resources, **and shall endeavor to complete consultations prior to implementation of the proposed action.** Early involvement means that the tribal government is given an opportunity to comment on a proposed action in time for the tribal government to provide meaningful comments that may affect the decision. Installations should take advantage of the processes put forth in 40 CFR parts 1500-1508 to involve tribes in early planning.

Where is the INRMP? A form letter to some of the affected tribes, and two short meetings with the Regional Native Corporation does not constitute Government to Government consultation.

In summary, Ahtna cannot support the proposed Fox 3 MOA expansion and proposed Paxson MOA for both alternative A and B. **Ahtna Incorporated can only support the No Action Alternative.** Ahtna Incorporated feels that there was a minimal amount of effort put towards the completion of this EIS.

- 1) The areas encompassed by the proposed action contain the traditional territories of the Ahtna Peoples.
- 2) This area is an incredibly rich ecosystem that supports the year round Customary and Traditional use of subsistence resources.
- 3) There are no studies completed concerning the possibility of wild fire ignition by the use of chaff and flare.
- 4) There is no plan in place to deal with a wildfire ignited by chaff & flare.
- 5) Caribou will not return to a burned area for 50 years.
- 6) The areas contained in the proposed Fox 3 MOA expansion and the proposed Paxson MOA contain the summer and fall ranges of the Nelchina Caribou Herd (NCH). This includes the calving ground of the NCH. Calving grounds are considered critical habitat. Ahtna feels that the Air Force has not dealt with this issue adequately.
- 7) The literature cited in this EIS concerning the effect of caribou to over flights, sonic booms, and chaff and flare deployment is lacking and incomplete. Ahtna feels that only literature supporting the proposed action is cited. The Air Force has reported that there is no literature on the effects of chaff & flare on wildlife. A complete literature review needs to be included in this EIS. Several studies of other caribou herds in Alaska show that caribou will choose avoidance when faced with development or human interaction. Ahtna feels the NCH will also choose avoidance in response to the proposed action. This will severely impact the Customary and Traditional Subsistence uses in these areas.

N0033

- 8) The NCH already faces incredible hunting pressure. ADFG has intensely managed this herd for over 50 years to provide an annual harvest of up to 3000 animals. Air space restrictions will inhibit ADFG's ability to accurately assess herd populations. This will result in smaller harvest quotas, as ADFG will have to be more conservative to meet management objectives.
- 9) Startle response of caribou has been discussed. The decibel of the sonic boom of the F-22 and F-35 has not been discussed. The averaging of day and night sound levels is not adequate to describe what the caribou will experience when the F-22s and F-35s fly over them at 500 feet AGL. Ahtna specifically wants to know what the sonic boom decibel level will be at 500 feet AGL, 1000 feet AGL, 2000 feet AGL and 5000 feet AGL for all aircraft type proposed to use this airspace.
- 10) The extensive studies of chaff particles and defensive flare constituents need to be disclosed. The studies were mentioned in the EIS but nothing was cited. Only one paper was in the reference section.
- 11) The Subsistence Assessment Section needs to be totally rewritten using relevant source documents, specifically the ADFG Board of Game Findings #2006-170 BOG. The Federal Subsistence Program customary and traditional use determinations, and ADFG BOG Findings #2006-170-BOG have already set the criteria for subsistence uses in the Copper River Basin. The Air Force has no right to create their own criteria, and then state that there will be no substantial impact to subsistence uses.
- 12) An 810 analysis has not been completed. . Issues that need to be addressed are 1) The effect of use, occupancy, or disposition on subsistence uses and needs, 2) The availability of other lands for the purpose sought to be achieved, 3) Cumulative effects resulting in reductions in the availability of resources used in subsistence purposes, caused by alteration of their normal locations, migration, and distribution patterns.
- 13) Ahtna Incorporated feels the Air Force has not completed their obligation of Government to Government consultation in this matter as mandated by Executive Order 13175 and the Department of Defense Instruction number 4710.02. Ahtna also feels that the two meetings with Ahtna will be used to show that they accomplished this obligation. Ahtna Incorporated is the Regional Native Corporation, not a tribal entity. The Air Force needs to implement face to face meetings with all eight Ahtna villages to satisfy this obligation. Sending a form letter, and stating there was no reply, does not satisfy the obligations.
- 14) There is no Integrated Natural Resource Management Plan as required by Department of Defense Instruction number 4710.02.

Ahtna Incorporated feels that there are not enough studies done on long term effects of over flights, sonic booms, and chaff & flare deployment to ensure that unfavorable impact to subsistence uses in the Ahtna Region does not occur. The Air Force has not included other areas in Alaska where the proposed maneuvers can take place in the EIS. Ahtna Incorporated feels that these maneuvers should be done somewhere else where the impacts can be studied long term. Only after long term studies can be accessed could Ahtna Incorporated approve of these new and expanded MOAs.

N0033

Thank You,

Kathryn Martin

Vice President of Land & Resources

Ahtna Incorporated

N0033**ATTACHMENT B****Findings for the Alaska Board of Game
#2006 – 170 - BOG****Game Management Unit 13
Caribou and Moose Subsistence Uses****Background**

Virtually since its inception, the Tier II subsistence permit system has been plagued with public complaints about inequities, unfairness, and false applications. Over the years, the Alaska Board of Game (Board) has amended its regulations numerous times to try to address management and legal problems, but the controversy continues and the system remains rife with problems. Public complaints have been primarily directed at the Tier II permitting system—particularly those near urban areas like the Minto moose hunt and the Nelchina Tier II caribou hunt.

The Board has primarily focused on the Nelchina basin caribou and moose hunts because these have generated the vast majority of the interest and complaints from the general public. In addition, Board members are concerned the hunting patterns no longer meet the Board's intent when these subsistence hunts were originally established in regulation. A review of these hunts question whether the current hunts are consistent with the Board's customary and traditional use findings based on the eight criteria the Joint Boards of Fish and Game established (5 AAC 99.010) for implementing the state subsistence law (AS 16.05.258(a)).

Statistics associated with the Nelchina caribou hunt illustrate some troubling trends. Permits have been slowly shifting away from local Alaskan residents the Board identified as the most dependent on the wildlife resources in the region and towards less subsistence dependent urban residents. Testimony from some local residents of Unit 13 indicated they no longer participated in the state subsistence program. The present Tier II scoring and permit allocation system has made it more difficult for long-time, resource-dependent residents of the area to compete for permits, forcing them to rely more heavily on the federal system to provide for subsistence opportunities. The system also makes it almost impossible for area newcomers and younger Alaskans to ever qualify for the limited permits despite their subsistence dependence on wildlife resources for food. In addition, many of the traditions associated with a subsistence way of life are being sidestepped and avoided, such as the traditional teaching of the art of hunting, fishing and trapping to younger generations; and the processing, utilization, and other long-term social and cultural relationships to the resources being harvested and to the land that produces those resources.

The Board's long-term goal is to design a system to accommodate subsistence-dependent users in such a manner that permits can be virtually guaranteed from year to year. The reliability of available hunting opportunities is critical to the maintenance of the subsistence way of life. This could be similar and complementary to the federal subsistence permit system. The federal program allows any Alaska resident living in the Copper Basin and several communities outside

N0033

of GMU 13 to harvest two caribou and one moose per year, there is no limit per household except in Unit 13(E) for moose, harvest of caribou by gender is also generally unrestricted in units 13(A) and 13(B), and moose hunters may only take any antlered bull under the federal system.

Bag limits may not be accumulated across both state and federal systems, so hunters can take a total of only one moose and two caribou for the year. State regulations allow all Alaskan residents to harvest a bull moose with spike-fork or 50-inch antlers or antlers with 4 brow tines on at least one side from September 1 – 20. In addition, up to 150 Tier II permits are issued for any bull moose, August 15 – 31, with only one permit being allowed per household. The moose seasons for federally qualified users on federally-managed lands are much longer from August 1 – September 20.

Under the state system, all caribou permits are issued under Tier II regulations and were limited to 3 per household. The Board recently changed the limit to 2 per household. The bag limit is one caribou, although in recent years, harvest under state regulation has been limited to bulls only. The caribou season for federally qualified users on federal land is 10 days longer in the fall, ending September 30 rather than September 20.

State regulations do not jeopardize a qualified federal subsistence hunter from hunting under a federal permit. However, if there are too many state applicants, controlling statutes mandate that permits be issued under the Tier II criteria, with all of its attendant problems.

The Board intends to explore subsistence hunt provisions that reflect and accommodate the customary and traditional use patterns of Nelchina caribou and moose in Game Management Unit (GMU) 13, while distinguishing those uses from other uses.

In accordance with the Joint Boards of Fisheries and Game eight criteria for implementing the state subsistence law, the following findings are made:

Findings

When the Board originally determined there were customary and traditional uses of the Nelchina Caribou Herd and moose in GMU 13, it recognized these subsistence uses were established by Ahtna Athabascan communities within the Copper River basin, and were later adopted by other Alaska residents. Due to the importance of, and high level of competition for subsistence permits in this area, the Board has undertaken, as precisely as possible, the task to identify the particular characteristics of these customary and traditional use patterns. Although they have changed over time due to limited access associated with demographic, economic, and technological factors, the patterns are characterized by traditional fall and winter hunting seasons, efficient methods and means, thorough use of most of the harvested animal, harvest areas traditionally associated with local communities, traditions about harvesting and uses that are passed between generations orally and through practice, and reliance on other subsistence resources from within these same traditional harvest areas

N0033

Criterion 1. A long-term consistent pattern of noncommercial taking, use, and reliance on the fish stock or game population that has been established over a reasonable period of time of not less than one generation, excluding interruption by circumstances beyond the user's control, such as unavailability of the fish or game caused by migratory patterns.

This criterion presupposes that an identifiable, consistent "pattern" of noncommercial taking, use, and reliance is characteristic of subsistence use. The Board finds, even though there are many similarities among all users of the moose and caribou resources in the area, there continue to be identifiable distinctions, constituting a unique pattern of subsistence use, that is traceable in direct line back to the original Ahtna Athabascan and later non-native customary and traditional use.

The Board has concluded that the pattern of moose and caribou subsistence use for this region was originally defined by the Ahtna Athabascan residents and then adopted and modified by other local settlers in the early 20th century. This pattern of use was established over many generations and focused on the total aggregate of fish, wildlife, and plant resources locally available to the area residents.

The greatest dependency on subsistence resources occurred prior to the completion of the existing road system in the 1940s. After about 1950, historical use patterns changed rapidly, especially with the introduction of more mechanized access methods. The mobility of the subsistence and non-subsistence users, the availability of seasonal and part-time employment, increased human populations, increasing competition for wildlife resources, and fluctuating game populations (particularly moose and caribou) caused major shifts in subsistence dependency of people within and adjacent to the region. Nevertheless, aspects of the traditional Ahtna Athabascan use pattern are present today, but subsistence-dependent families engaged in that pattern now account for a smaller percentage of all users than a half-century ago.

Most of the long-term subsistence patterns in this area are community-based. The area's communities tend to be long-established, by Alaskan standards, and the residents of these communities tend to be long-term residents, descending from multi-generational families with long ties to the area. These communities tend to exhibit a use of local resources that stretches back to well before Euroamerican contact. In contrast, the use pattern based out of nearby urban areas tends to involve much more recently established communities, a high degree of turnover among residents, short-term residency and, generally, a relatively brief history of use.

Criterion 2. A pattern of taking or use recurring in specific seasons of each year.

Local communities established a tradition of hunting caribou, moose, and other big game species in the late summer and early fall following subsistence fishing, and again hunting in the winter as fresh meat was needed and game was available. Winter hunts have always been critical to subsistence users, as very few other subsistence resources are available during this time. This need for, and use of, winter hunting opportunities is different from use patterns developed by residents of Alaska's more developed and urban areas, where almost all big game hunting takes place exclusively in the fall and is controlled largely by regulations. Thus, as late as 1984, over 60% of the caribou harvest taken by local residents was taken during the winter. Recent changes in that pattern can be largely attributed to regulatory changes, competition from non-local

N0033

hunters and shifting migratory patterns of the caribou herd. The seasonal use pattern was based on the traditional Ahtna seasonal movements and the general availability of game. For example, the fall hunt traditionally followed the salmon harvest, whereas the winter hunt took place whenever meat was needed and game was available.

Criterion 3. A pattern of taking or use consisting of methods and means of harvest that are characterized by efficiency and economy of effort and cost.

Before the mid-20th century, Ahtna Athabascan hunters tended to rely on boat access along the area's major waterways in fall, on foot along established trails, and by dog team along winter trails after freeze-up. With the opening up of the Nelchina basin to highway access, and the introduction of off-road vehicles, snowmachines, four-wheelers, and other transportation innovations, a shift in the use pattern occurred. Now, local residents tend to utilize roads as hunting corridors in place of rivers in the fall, and use snowmachines to access the backcountry in winter. Recently, expensive off-road vehicles have been purchased and used by many non-local users and a few more affluent local residents in an attempt to compete with non-local hunters and to increase their opportunity for success. The use of all terrain vehicles may create their own hunting efficiencies as hunting effort and transportation take advantage of labor-saving devices. Hunting methods have changed over the last 75 years. Automobiles, snowmachines, and less expensive all terrain vehicles may make hunting more effective because local and non-local residents can now cover larger areas when hunting caribou or moose. Local hunters can, when animals are available, make relatively short trips that fit into a contemporary work schedule. On the other hand, the use of highway, off-road, and similar vehicles has promoted more frequent short trips with considerable transportation costs for depreciation, fuel, and maintenance. What are being lost are the multi-resource harvest efficiencies associated with long subsistence-oriented summer and fall camping trips traditionally engaged in by Ahtna communities. Thus, recent transportation improvements and fuel prices may have changed traditional subsistence activities to the point where it is unlikely that there is a positive cost/benefit (from an economic standpoint) associated with some of the hunting techniques, especially in cases involving the use of expensive recreational motor vehicles. Overall, the use of some motorized vehicles such as ATVs has blurred the distinction between true customary and traditional patterns and recreational activities.

Residents of local communities—those with the longest histories of use of moose and caribou in the region—have traditionally traveled shorter distances to hunt than do non-local participants; and generally utilize less technology in doing so. Most Ahtna elders testified they still prefer to walk in to hunting areas and maintain permanent camps, whenever possible, in accordance with longstanding means and methods. On the other hand, most non-local users must travel at least 125 miles just to get to the area and have tended to be reliant on all-terrain vehicles (ATVs), aircraft and other expensive off-road and recreational vehicles.

As late as 1984, Copper Basin residents utilized only highway vehicles for hunting access over 65% of the time. It is the Board's conclusion that many of these newer technologies have been adopted based on a perceived need to compete with technologically-oriented recreational hunters from Alaska's urban areas. This may be a direct effect of the 1984 regulations.

N0033

Historically, much of the taking of caribou, moose, and small game was done as part of a seasonal round of subsistence activities throughout defined areas used by the community. Family dependence on these resources required a commitment of considerable time and effort to accumulate adequate subsistence resources to meet annual protein requirements and other customary and traditional uses.

Another example of subsistence efficiency in the customary and traditional use pattern has been that specialized hunters tend to provide for the community at large, sometimes or often taking more than necessary for their own family's use in their capacities as community providers, and to fulfill social and cultural obligations. Community subsistence activities are then divided among members and further introduced into traditional patterns of barter and exchange. Thus, some harvest and others process, distribute, receive and utilize the results of the harvest. Each member of the community has a defined role and specialty.

A third example of subsistence efficiency, historically, has been the effort to keep hunting as close to home as reasonably possible, minimizing cost and effort necessary to obtain the wild food resources needed by families and communities. The Board believes that, if competition among users can be reduced, this efficiency is likely to be easier for subsistence users to realize.

In these community efforts, special emphasis has been placed on allowing the maximum opportunity to harvest as many animals and the widest variety of useable species as efficiently as possible. Emphasis was also placed on food gathering activities and other traditions associated with Ahtna Athabascan communities.

Criterion 4. The area in which the noncommercial long-term, and consistent pattern of taking, use, and reliance upon the fish stock or game population has been established.

The Board is examining the area where the subsistence hunting of big and small game occurred prior to the significant change in uses and activities that occurred after approximately 1950 in Game Management Unit 13.

Subsistence uses involve an intimate and exclusive relationship between the user and a very particular set of places generally in close proximity to the hunter's residence. The user is tied to the land. Other types of uses do not exhibit these close, long-term, multi-generational ties to a particular locality. Even as late as 1981, hunters from Copper Basin communities did not report traveling out of the basin to hunt, while urban-based hunters named alternative areas if they could not hunt Nelchina caribou and moose. Testimony from Ahtna elders emphasized their reliance on local fish and game, and their reluctance, for practical and cultural reasons, to travel outside of their traditional areas for subsistence purposes. Likewise, they described the longstanding family and community use histories and patterns for such areas. Consistently, lifelong residents of the local areas did not share the attitude of utilizing other areas. When Nelchina caribou were not available to them they either added emphasis on moose, and/or use of the Mentasta caribou herd. Resident lake fish species and small game were other alternatives commonly mentioned as alternative and supplemental wild food resources. Families in the range of the Nelchina caribou who harvested little or no wild game mentioned receiving donated meat as an alternative. This differs markedly from the use patterns found in Alaska's urban areas,

N0033

where traveling to, and exploring, new game country is deemed a virtue and an essential part of many outdoor experiences.

The Ahtna pattern exhibits a familiarity with terrain and landscape including the associated history of the region transmitted through oral traditions and Ahtna geographic placenames.

Criterion 5. A means of handling, preparing, preserving, and storing fish or game that has been traditionally used by past generations, but not excluding recent technological advances where appropriate.

The traditional pattern has been to salvage and use all parts of the harvested animal, in conformance with traditions prohibiting waste. Lifelong residents of the Copper Basin testified they still practice their traditional methods of harvest by retrieving the entire carcass and all bones, hide, head, heart, liver, kidneys, stomach, and fat. Only the antlers were often left behind. This also differs from patterns based out of urban areas, where hunters tend to focus on the meat and antlers, usually leaving most organs, bones, and the hide in the field.

Ahtna elders also emphasized that preparation and storage are viewed as essential components of their overall use. Women traditionally look forward to practicing their roles as preparers and preservers of harvested game every bit as much as men looking forward to harvesting and providing the game. These traditions and roles are passed on by older relatives to younger family members through in-the-field training and a system of *engii* (rules of appropriate behavior or taboos) that teach traditional means of harvest, handling, and preparation. These “engiis” emphasize traditional Ahtna views of the human place within the natural world and a respectful treatment of animals.

Criterion 6. A pattern of taking or use that includes the handing down of knowledge of fishing or hunting skills, values, and lore from generation to generation.

The Board has concluded that the subsistence traditions of handing down the hunting and fishing knowledge, values and skills through family oriented experiences are an important aspect of the subsistence way of life in this region. Providing the opportunities for the young and old to participate in subsistence activities is critical to the perpetuation of traditional knowledge about hunting locations, hunting methods, methods of handling harvests, and respectful treatment of wildlife. To increase hunting opportunities for youth, a recent provision adopted by the Board allows a resident hunter between the ages of 10 and 17 to hunt on behalf of a resident permit holder. The youth hunter must have completed a certified Basic Hunter Education course and be in direct supervision of the permit holder, who is responsible for ensuring all legal requirements are met.

Ahtna elders have passed this knowledge on to the next generation in the context of community-based traditions that included relatively long summer and fall camping trips described above. As mentioned previously, teaching roles and lessons tend to be more formalized through the system of “engiis” than is the case for uses based out of the urban areas. Skills emphasized included not only those needed to harvest each species, but also the art of field preparation and care for a wide

N0033

variety of species and the utilization, preparation, and distribution of game. Most local users learned how to hunt in the local area from other family members in the local area. Most older, local users have also taught other family members. On the other hand, most non-local users learn about hunting in the area by personal experience or from fellow non-local, unrelated hunters. Also, non-local users tend to be controlled primarily by applicable statutes and regulations rather than long-term oral traditions and community-based values.

The Board considers it extremely important to stress the need to pass on skills and knowledge associated with utilization of all parts of the animal taken, as well as preservation of the traditional, cultural rules and family values associated with these subsistence users in this area. Field skills need to be perpetuated for handling not only the meat but the hides, internal organs, stomach, and intestines. This is consistent with the customary practice of maximizing the use of animals taken characteristic of subsistence uses.

Criterion 7. A pattern of taking, use, and reliance where the harvest effort or products of that harvest are distributed or shared, including customary trade, barter, and gift-giving.

Widespread community-wide sharing is customary in local communities, involving all family members, elders, others in need, and taking place in formal settings such as during ceremonial potlatches. As such, sharing has associated social, cultural, and economic roles in the community. Sharing is expected and follows well-understood community standards that are structured on kinship relations and obligations. As an example, young hunters are required by Athabaskan tradition to give all or most of their first harvested animal to elders and others in need. Also, traditional barter and exchange follow these standards. Successful Ahtna harvesters traditionally share some of their moose and caribou meat with other families and communities to meet their social obligations and for ceremonial purposes. This, again, is in contrast to the uses arising out of the urban areas where hunters are completely free to share, or not share, as they see fit and there is not a system of sharing, barter, and exchange. In addition to the key social and cultural roles of sharing in the local rural community, sharing of subsistence resources plays a key economic role in distributing essential food supplies throughout the community. The Board has concluded it is imperative to accommodate the customary and traditional family and community harvest sharing practices as part of the subsistence way of life to the maximum extent possible.

Use of the state authorized proxy system has provided a limited opportunity for individuals to harvest for permittees who are personally incapable of participating in the field but who have a personal history of subsistence use. Proxy hunters are not required to fully accommodate the customary and traditional practices. Non-local users, on the other hand, tend to have few established rules or traditions requiring sharing, and seldom share outside of their own households. External sharing, when it occurs, is usually with friends and co-workers, and extensive kinship networks are absent. There are no non-local traditions of community-wide meat distribution.

N0033

Criterion 8. A pattern that includes taking, use, and reliance for subsistence purposes upon a wide diversity of the fish and game resources and that provides substantial economic, cultural, social, and nutritional elements of the subsistence way of life.

The Board has concluded it is critical to emphasize the values associated with the reliance and dependence on a wide variety of fish and wildlife resources as an important element of the subsistence way of life for this region. Subsistence use patterns historically required a significant dedication of time and effort towards the harvesting of adequate fish and game resources to meet the protein and nutritional requirements of the subsistence harvesters, their families, and their communities.

This differs markedly from the more recreational type of uses arising out of the Alaska's more urban areas, where a single, focused effort to harvest only one resource in any given location, and then salvage only what is legally required from that resource, tends to be a predominant characteristic. To the extent that other foodstuffs are harvested, they are often harvested in completely separate areas, far removed from the fall hunting area. Also, different hunting areas are explored in different years. This separation of the interconnected diversity of resource uses also seriously undermines the principles reflected in Criterion 3. As more and more emphasis is placed on single species harvesting patterns, cost is increased, and efficiency is reduced. Such practices do not reflect the customary and traditional use pattern.

Reliance on most, or all, locally available sources of wild food is characteristic of a traditional subsistence way of life where maximum economic and nutritional benefits typically must be derived from the hunt and harvests. The local harvest of salmon has historically been the most important wildlife resource in terms of useable pounds per subsistence-dependent family in Unit 13. Alaska residents are allowed to use a fish wheel in the Copper River between Slana and the Copper River bridge at Chitina to harvest salmon—permits are issued free of charge. The limit is 500 total salmon for a household with two or more members and 200 for a household with one member, with no limit on the number of Chinook salmon in the total harvest by fish wheel. The salmon run in the Copper River is primarily comprised of sockeye and Chinook salmon.

Use of moose and caribou by local communities is embedded in a wide range of other fish and wildlife uses. It is also embedded in a mixed, subsistence-cash economy characterized by seasonal employment and relatively low cash incomes. A wide variety of subsistence foods are still critically important in these local economies. Almost all hunting, fishing, and gathering takes place locally and the majority of meat and fish consumed tends to come from local sources.

Big game species are taken for food and not for their trophy value by families engaged in subsistence uses. The Board may undertake efforts to reduce or eliminate the trophy values of the resources taken to focus entirely on the inherent subsistence values.

ALASKA DEPARTMENT OF FISH AND GAME
Copper Basin MOOSE
Community Subsistence Harvest Permit
PROGRAM 2012-2013

**HUNT ADMINISTRATION**

Community Subsistence Harvest (CSH) Hunt administration will be in accordance with the Alaska Department of Fish and Game's statutory and regulatory authority, including managing this common use resource for sustained yield while adhering to laws regarding the subsistence preference passed by the Alaska State Legislature.

COPPER BASIN MOOSE CSH PERMIT

According to regulations found at 5 AAC 92.072 *Community Subsistence Harvest Hunt Area* and at 5 AAC 92.052 *Discretionary Permit Hunt Conditions and Procedures*, ADF&G may issue community-based subsistence harvest permits for big game species where the Alaska Board of Game has established a community harvest hunt area. The board established the Gulkana, Cantwell, Chistochina, Gakona, Mentasta, Tazlina, Chitina, and Kluti-Kaah (Copper Center) Community Harvest Area for moose and caribou in 2009 (5 AAC 92.074(d) *Community Subsistence Harvest Areas*), hereafter referred to as the Copper Basin CSH area.

The CSH permit program allows communities or groups of 25 or more to apply annually for a CSH permit for an established CSH area. A group can choose to apply for a Copper Basin moose CSH permit, a Copper Basin caribou CSH permit, or both. These groups may select, from their group members, individual harvesters who may possess particular expertise in hunting to harvest wildlife resources on behalf of the community or group.

The hunt conditions in this Copper Basin Moose CSH permit program are made for the purposes of notifying the community/group of users of how to use the moose in a manner consistent with the customary and traditional use pattern described in the board's 2006 and 2011 findings *Game Management Unit 13 Caribou and Moose Subsistence Uses* (2006-170-BOG and 2011-184-BOG), as well as to ensure an orderly administration of the CSH permit program and hunt (CM300).

A community or group may possess only one (1) Copper Basin Moose CSH permit at any given time and group members may subscribe to only one (1) Copper Basin Moose CSH group per regulatory year. The Copper Basin Moose CSH permit expires at the end of the regulatory year for which it was issued. Renewal of a Copper Basin Moose CSH permit is the responsibility of the community or group coordinator.

APPLICATION PROCESS**THE COMMUNITY OR GROUP COORDINATOR**

In addition to permit hunt conditions and procedures found in 5 AAC 92.050 and 5 AAC 92.072, the community or group applying for a Copper Basin Moose CSH permit must designate a coordinator as part of the application process. The coordinator certifies that the information presented in a Copper Basin Moose CSH permit application is true and correct to the best of the coordinator's ability; monitors and reports on compliance with the conditions of a Copper Basin Moose CSH permit; and serves as the primary point of contact, among other duties. ADF&G will issue one (1) Copper Basin Community Moose Harvest Permit to each coordinator.

2012-2013 Hunt conditions: Copper Basin MOOSE CSH

Page 2 of 6

For 2012–2013, the group application period will be November 1 – December 31, 2011. Group Applications must be postmarked by December 31 and received by January 15. Groups will not be formally approved until:

- 1) at least 25 eligible group members have applied (including the group coordinator), and
- 2) all moose CSH permit reporting requirements from the previous regulatory year have been met (not applicable to first-time CSH groups).

Once Group Applications have been submitted, individual/household Participant Applications will be accepted through July 1, 2012 by 5 p.m. (AST). Participant Applications must be submitted to a group coordinator for approval. Group coordinators must then submit approved Participant Applications to ADF&G; applications must be postmarked by June 15 and received by July 1. Incomplete applications will be void per 5 AAC 92.050 *Required Permit Hunt Conditions and Procedures*. Send completed applications to your local ADF&G office, or to the Anchorage ADF&G office (see "For More Information," below).

There is no limit to the number of communities or groups that may apply for a Copper Basin Moose CSH permit and there is no limit to the number of participants who may subscribe to a community or group, except that there must be 25 or more verified members in each group.

INDIVIDUALS/HOUSEHOLDS

Each household must submit one (1) completed Participant Application to a group coordinator for approval. All members of the household age 10 and up must be listed on the application and are subject to all CSH hunt eligibility requirements and conditions. The coordinator must ensure that group members understand the terms and conditions of the CSH permit hunt. Group coordinators may submit approved Participant Applications to ADF&G through July 1.

A "household" means that group of people domiciled in the same residence per 5 AAC 92.990 (23) *Definitions*.

By submitting a completed Participant Application, all household members are certifying they have read, understand, and will comply with the hunt conditions as well as the applicable Board of Game findings (*Game Management Unit 13 Caribou and Moose Subsistence Uses*).

ADF&G will issue one (1) Copper Basin CSH moose harvest ticket/report to each household member listed on the application (the bag limit is 1 bull / person; see "Open Seasons, Bag Limits, and Antler Restrictions," below).

Hunters must abide by all applicable state hunting regulations and statute requirements including licensing, hunter education, and reporting requirements. Similar to other state hunts, CSH harvest ticket numbers must appear on the back of the hunter's license, CSH harvest tickets must be carried in the field while hunting, they must be validated immediately upon killing an animal and before leaving the kill site, and must remain in the hunter's possession until the animal has been delivered to the location of processing for human consumption.

Copper Basin CSH harvest reports must be mailed or delivered to ADF&G within 5 days of taking the bag limit, or within 15 days of the close of the final season, even if the hunter did not hunt or did not take an animal. Hunters may also report online.

PARTICIPANT ELIGIBILITY

All household members subscribing to the Copper Basin Moose CSH hunt must meet the following eligibility requirements. The requirements apply to the same regulatory year as the CSH Participant Application (2012-2013).

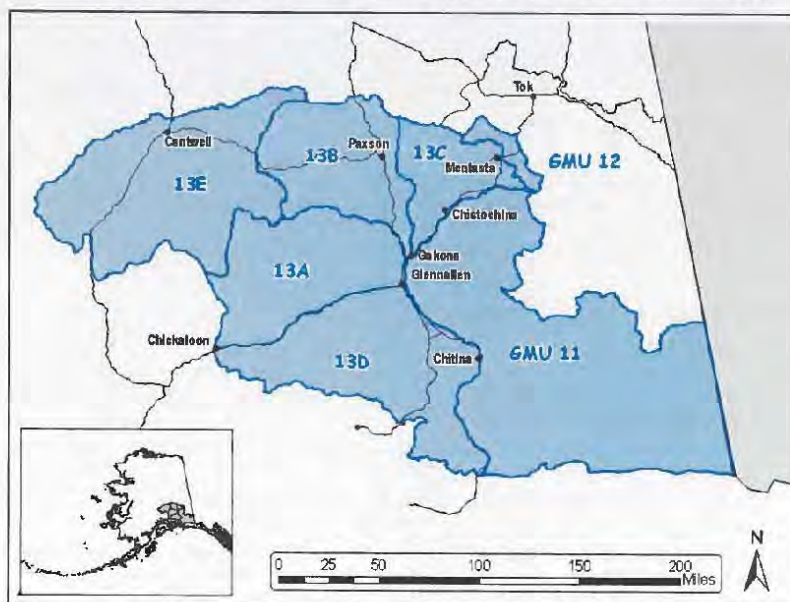

November 8, 2011

©ADF&G www.adfg.state.ak.us/copyright

Page 3 of 6

- No member of the household can apply for any drawing/Tier I/Tier II/registration moose hunts, or hold general season moose harvest tickets.
- No member of the household can apply for drawing/Tier I/Tier II/registration caribou hunts outside the Copper Basin CSH hunt area.
- All household members agree to hunt moose and caribou only within the Copper Basin CSH hunt area.
- No member of the household can be on the Failure to Report (FTR) list.

The Copper Basin CSH permit hunt area includes all of Unit 11, Unit 13, and a portion of Unit 12 (southwest of the Tok River where it crosses the Glenn Highway Tok Cut-Off) per 5 AAC 92.074 (d).

The Copper Basin moose CSH hunting season dates and bag limits are specific to game management units within the CSH area. Up to 70 bull moose that do not meet general season antler restrictions ("any bulls") can be taken under the Copper Basin Moose CSH hunt. Limits may be set on how many "any bulls" may be harvested from specific geographic areas within the CSH hunt area for conservation reasons. There is

©ADF&G www.adfg.state.ak.us/copyright

N0033

2012-2013 Hunt conditions: Copper Basin MOOSE CSH

Page 4 of 6

no collective limit to the number of moose meeting general season antler restrictions (see below) that can be taken under the Copper Basin Moose CSH permit.

The bag limit is one (1) bull moose per person in Unit 11 and 13 and one (1) bull moose with spike/fork, or 50" antlers, or 4 or more brow tines in the open portion of Unit 12, unless modified by ADF&G emergency order.

If the number of "any-bulls" reported taken for any one geographic area reaches or exceeds established conservation limits (announced prior to hunting season), the area will remain open to CSH hunters, although the bag limit will change by emergency order to reflect the general season antler restriction for the area.

The Copper Basin Moose CSH hunt season dates and general season antler restrictions are listed below:

Area	CSH Season Dates	General Season Antler Restrictions
Unit 11	August 10–September 20	Spike/fork, or 50" antlers, or 3 or more brow tines.
Unit 13	August 10–September 20	Spike/fork, or 50" antlers, or 4 or more brow tines.
Portion of Unit 12	August 24–August 28 and September 8–September 17	Spike/fork, or 50" antlers, or 4 or more brow tines.

DESIGNATED HUNTERS

The CSH program allows a community or group to designate members (from within the group) who may possess particular expertise in hunting to harvest wildlife resources on behalf of the members of the community or group. To take a moose on behalf of another CSH harvest ticket holder (beneficiary), a hunter must carry both the beneficiary's and their own CSH moose harvest ticket in the field while hunting. The harvested moose must be delivered to the beneficiary. The beneficiary is responsible for all reporting requirements.

HUNT TERMS AND CONDITIONS

Customary and traditional uses of Unit 13 moose are thoroughly described in 2006-170-BOG and 2011-184-BOG. The Board of Game found that the subsistence pattern in the Copper Basin is characterized by thorough use of most of the harvested animal. Therefore, all participants in the Copper Basin Moose CSH hunt must salvage for human consumption:

1. All edible meat from the frontquarters, hindquarters, ribs, neck, and backbone, as well as the head, heart, liver, kidneys, stomach, and hide; and
2. Meat of the head, frontquarters, hindquarters, and ribs must remain naturally attached to the bones until delivered to the place where it is processed for human consumption.

The board also found that the subsistence pattern is characterized by meaningful communal sharing. At least one communal sharing event featuring moose harvested under the terms of a Copper Basin CSH hunt must be held. A complete description of the event (date, location, number of participants, amount of meat shared, and so forth) must be included in the final hunt report, to be submitted by the group / community coordinator.

CUSTOMARY AND TRADITIONAL USE PATTERN

The edible products of moose taken under the terms of a Copper Basin Moose CSH hunt must be used for human consumption and may not be sold or offered for sale. In order to comply with 5 AAC 92.072 (c) (1) (F), the department must ensure that the applicable customary and traditional use patterns described in board findings are observed by subscribers, including meat sharing. Subscribers need not have already

2012-2013 Hunt conditions: Copper Basin MOOSE CSH

Page 5 of 6

established the pattern of community use summarized below; however, by applying, subscribers will be certifying that they have read, understood, and will voluntarily attempt to participate in and establish the pattern of subsistence use described in the Unit 13 board findings summarized below:

1. Participation in the consistent pattern of noncommercial taking, use, and reliance on Nelchina caribou, Copper Basin moose and other local wild foods. The existing pattern of use has been established over many generations and is focused on the total aggregate of fish, wildlife, and plant resources in the Copper Basin CSH area.
2. Participation in the pattern of taking or use of wild resources from the Copper Basin CSH area that follows a seasonal use pattern of year-round harvest effort in the area, with harvests of moose and caribou by community members in both the fall and winter hunts, when legally permissible.
3. Participation in the pattern of taking or use of wild resources in the Copper Basin CSH area that includes methods and means of harvest characterized by efficiency and economy of effort and cost, especially taking advantage of the maximum opportunity to harvest, as efficiently as possible, a variety of usable species in the Copper Basin CSH area.
4. Participation in the pattern of taking or use of wild resources that occurs in the Copper Basin CSH area due to close ties to the area and a familiarity with the terrain and associated history of the Copper Basin CSH area.
5. Use of means of processing and preserving wild resources from the Copper Basin CSH area that have traditionally been used by past generations, including use of all of the parts required to be removed from the field under the terms of a Copper Basin Moose CSH permit.
6. Participation in the pattern of taking or use of wild resources from the Copper Basin CSH area that includes the handing down of knowledge of hunting skills, values, and lore about the Copper Basin CSH area from generation to generation. The board considered it critical to the perpetuation of the customary and traditional use pattern to provide opportunities for the young and old to participate in subsistence activities; the board also found it extremely important to stress the need to pass on skills and knowledge associated with use of all parts of the harvested animal.
7. Participation in the pattern of taking wild resources from the Copper Basin CSH area in which the harvest is shared throughout the community, including customary trade, barter, and gift-giving.
In order to observe this pattern, a portion of the edible products of moose taken under the terms of a Copper Basin Moose CSH hunt should be primarily shared, in a meaningful way, with other members of the community or group. Hunters should also demonstrate a pattern of meaningful communal sharing that provides first for the needs of the community or group elders and disabled, as identified by the community or group. In addition, hunters who have harvested their first moose should give a portion to other members of the community or group.
8. Participation in the pattern that includes taking, use, and reliance for subsistence purposes not only on Nelchina caribou and moose, but also on a wide variety of wild resources in the Copper Basin area.

REPORTING

Harvest ticket holders must mail or deliver Copper Basin CSH harvest reports to ADF&G within 5 days of taking the bag limit, or within 15 days of the close of the season, even if the hunter did not hunt or did not take an animal. Hunters may also report online.

Failure to report may jeopardize sustained yield management of Copper Basin moose and the future of the CSH hunt; therefore, failure to report according to this schedule may result in citation and/or placement of harvest ticket holders on the state Failure to Report (FTR) list.

To better address the subsistence needs of Copper Basin Moose CSH participants, the board requested that all moose harvested by CSH participants within the CSH area be accounted for, regardless of whether

N0033

2012-2013 Hunt conditions: Copper Basin MOOSE CSH

Page 6 of 6

taken under federal or state regulations. All moose taken (that do not meet general antler restrictions) by Copper Basin Moose CSH participants within the CSH area will count against the up to 70 any-bull moose allowed for the CSH hunt.

In order for the department to ensure that permittees have complied with all regulations addressing the terms and conditions of their Copper Basin Moose CSH permit, as well as the customary and traditional use pattern described in 2006-170-BOG and 2011-184-BOG, and in order to gather additional data on subsistence uses, the community or group coordinator must submit an annual written report, which summarizes the group's member households' required reporting information as well as a description of the communal pattern observed by participants. The report must be postmarked by October 20. Additional supplemental reports can be submitted after October 20, prior to the deadline for Participant Applications (July 1). However, subsequent Copper Basin Moose CSH group applications will not be approved until all reporting requirements are met. If no report or an incomplete report is received, the group will be ineligible to participate in subsequent Copper Basin Moose CSH hunts. Group coordinators are encouraged to submit a complete written report as soon as possible to ensure adequate notice for subsequent group approval.

The written report must include, at a minimum:

1. A list of the names and harvest ticket numbers for those individuals whose bag limits were filled under the terms of a Copper Basin Moose CSH permit; and
2. A list of the names and harvest ticket numbers of the beneficiaries whose bag limits were filled by a designated hunter under the terms of a Copper Basin Moose CSH permit; and
3. The number of moose taken in federal subsistence hunts by those hunters also participating in the Copper Basin Moose CSH hunt; and
4. A specific description of how the community or group observed the customary and traditional use pattern described in 2006-170-BOG and 2011-184-BOG. The department will provide a reporting form to assist with this section of the report; however, a summary narrative is also required that includes a description of at least one meaningful communal sharing event.

Some information in these reports may be subject to state confidentiality laws.

Deliver or mail reports to: ADF&G Copper Basin CSH

To ADF&G Staff:

- 1) ADP & G Staff:
a) Have Group Coordinator complete the form above
- 2) Group Name, Mailing Address, and Group Coordinator sections must be completed and signed before proceeding
- 3) Group Coordinator must specify whether this application is for the Moose or Caribou program. If necessary they can fill out an additional application and apply for both programs.
- 4) A Group Number can be retrieved from:
WinfoNet > Traditional Use Permits > Copper Basin Community Harvest
- 5) Photocopy this form and provide copy to Group Coordinator

ALASKA DEPARTMENT OF FISH AND GAME
Copper Basin CARIBOU
Community Subsistence Harvest Permit
PROGRAM 2012-2013

HUNT ADMINISTRATION

Community Subsistence Harvest (CSH) Hunt administration will be in accordance with the Alaska Department of Fish and Game's statutory and regulatory authority, including managing this common use resource for sustained yield while adhering to laws regarding the subsistence preference passed by the Alaska State Legislature.

COPPER BASIN CARIBOU CSH PERMIT

According to regulations found at 5 AAC 92.072 *Community Subsistence Harvest Hunt Area* and at 5 AAC 92.052 *Discretionary Permit Hunt Conditions and Procedures*, ADF&G may issue community-based subsistence harvest permits for big game species where the Alaska Board of Game has established a community harvest hunt area. The board established the Gulkana, Cantwell, Chistochina, Gakona, Mentasta, Tazlina, Chitina, and Kluti-Kaah (Copper Center) Community Harvest Area for moose and caribou in 2009 (5 AAC 92.074(d) *Community Subsistence Harvest Areas*), hereafter referred to as the Copper Basin CSH area.

The CSH permit program allows communities or groups of 25 or more to apply annually for a CSH permit for an established CSH area. A group can choose to apply for a Copper Basin caribou CSH permit, a Copper Basin moose CSH permit, or both. These groups may select, from their group members, individual harvesters who may possess particular expertise in hunting to harvest wildlife resources on behalf of the community or group.

The hunt conditions in this Copper Basin Caribou CSH permit program are made for the purposes of notifying the community/group of users of how to use caribou in a manner consistent with the customary and traditional use pattern described in the board's 2006 and 2011 findings *Game Management Unit 13 Caribou and Moose Subsistence Uses* (2006-170-BOG and 2011-184-BOG), as well as to ensure an orderly administration of the CSH permit program and hunt (CC001).

A community or group may possess only one (1) Copper Basin Caribou CSH permit at any given time and group members may subscribe to only one (1) Copper Basin Caribou CSH group per regulatory year. The Copper Basin Caribou CSH permit expires at the end of the regulatory year for which it was issued. Renewal of a Copper Basin Caribou CSH permit is the responsibility of the community or group coordinator.

APPLICATION PROCESS

THE COMMUNITY OR GROUP COORDINATOR

In addition to permit hunt conditions and procedures found in 5 AAC 92.050 and 5 AAC 92.072, the community or group applying for a Copper Basin Caribou CSH permit must designate a coordinator as part of the application process. The coordinator certifies that the information presented in a Copper Basin Caribou CSH permit application is true and correct to the best of the coordinator's ability; monitors and reports on compliance with the conditions of a Copper Basin Caribou CSH permit; and serves as the primary point of contact, among other duties. ADF&G will issue one (1) Copper Basin Community Caribou Harvest Permit to each coordinator.

N0033

2012-2013 Hunt conditions: Copper Basin CARIBOU CSH

Page 2 of 6

For 2012–2013, the group application period will be November 1 – December 31, 2011. Group Applications must be postmarked by December 31 and received by January 15. Groups will not be formally approved until:

- 1) at least 25 eligible group members have applied (including the group coordinator), and
- 2) all caribou CSH permit reporting requirements from the previous regulatory year have been met (not applicable to first time CSH groups).

Once Group Applications have been submitted, individual/household Participant Applications will be accepted through July 1, 2012 by 5 p.m. (AST). Participant Applications must be submitted to a group coordinator for approval. Group coordinators must then submit approved Participant Applications to ADF&G; applications must be postmarked by June 15 and received by July 1. Incomplete applications will be void per 5 AAC 92.050 *Required Permit Hunt Conditions and Procedures*. Send completed applications to your local ADF&G office, or to the Anchorage ADF&G office (see "For More Information," below).

There is no limit to the number of communities or groups that may apply for a Copper Basin Caribou CSH permit and there is no limit to the number of participants who may subscribe to a community or group, except that there must be 25 or more verified members in each group.

INDIVIDUALS/HOUSEHOLDS

Each household must submit one (1) completed Participant Application to a group coordinator for approval. All members of the household age 10 and up must be listed on the application and are subject to all CSH hunt eligibility requirements and conditions. The coordinator must ensure that group members understand the terms and conditions of the CSH permit hunt. Group coordinators may submit approved Participant Applications to ADF&G through July 1.

A "household" means that group of people domiciled in the same residence per 5 AAC 92.990 (23) *Definitions*.

By submitting a completed Participant Application, all household members are certifying they have read, understand, and will comply with the hunt conditions as well as the applicable Board of Game findings (*Game Management Unit 13 Caribou and Moose Subsistence Uses*).

ADF&G will issue one (1) Copper Basin CSH caribou harvest ticket/report to each household (the bag limit is 1 caribou / household).

Hunters must abide by all applicable state hunting regulations and statute requirements including licensing, hunter education, and reporting requirements. Similar to other state hunts, CSH harvest ticket numbers must appear on the back of the hunter's license, CSH harvest tickets must be carried in the field while hunting, they must be validated immediately upon killing an animal and before leaving the kill site, and must remain in the hunter's possession until the animal has been delivered to the location of processing for human consumption.

Copper Basin CSH harvest reports must be mailed or delivered to ADF&G within 5 days of taking the bag limit, or within 15 days of the close of the final season, even if the hunter did not hunt or did not take an animal. This hunt may close early; it is the hunter's responsibility to check for Emergency Closures. Hunters may also report online.

PARTICIPANT ELIGIBILITY

All household members subscribing to the Copper Basin Caribou CSH hunt must meet the following eligibility requirements. The requirements apply to the same regulatory year as the CSH Participant Application (2012-2013).

N0033

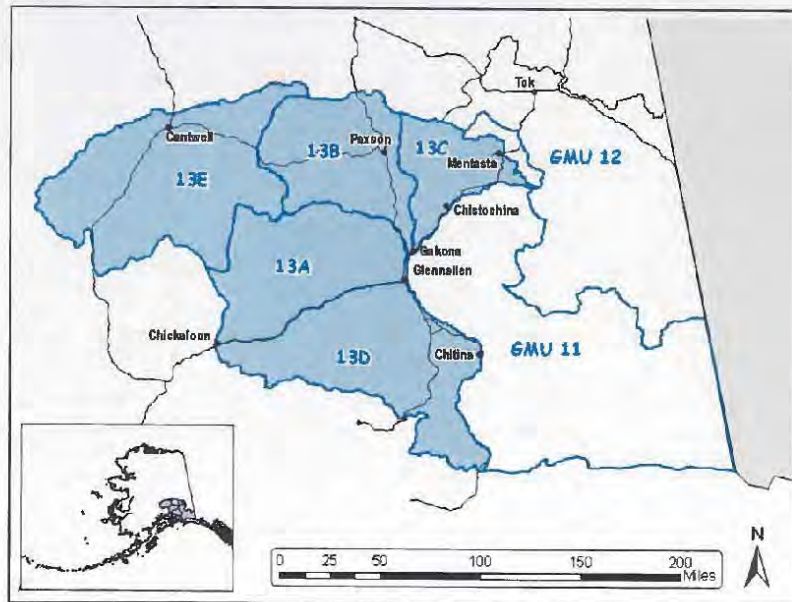

2012-2013 Hunt conditions: Copper Basin CARIBOU CSH

Page 3 of 6

- No member of the household can apply for any drawing/Tier I/Tier II/registration caribou hunts, or hold general season caribou harvest tickets (unless the hunt occurs after the close of the CSH hunt and the bag limit is higher).
- No member of the household can apply for drawing/Tier I/Tier II/registration moose hunts outside the Copper Basin CSH hunt area.
- All household members agree to hunt moose and caribou only within the Copper Basin CSH hunt area.
- No member of the household can be on the Failure to Report (FTR) list.

COPPER BASIN CSH PERMIT HUNT AREA, AND AREA OPEN TO CARIBOU HUNTING

The Copper Basin CSH permit hunt area includes all of Unit 11, Unit 13, and a portion of Unit 12 (southwest of the Tok River where it crosses the Glenn Highway Tok Cut-Off) per 5 AAC 92.074 (d). Due to conservation concerns for adjacent caribou herds, only Unit 13 is open to caribou hunting under the terms of a Copper Basin Caribou CSH permit.

OPEN SEASONS AND BAG LIMITS

The Copper Basin Caribou CSH season is: August 10 – September 20, and October 21 – March 31. The bag limit is one (1) caribou per household. For conservation reasons, the season and bag limit may be

November 8, 2011

N0033

2012-2013 Hunt conditions: Copper Basin CARIBOU CSH

Page 4 of 6

modified by ADF&G emergency order. Up to 300 caribou can be taken under the Copper Basin Caribou CSH permit program (applies to all groups collectively).

DESIGNATED HUNTERS

The CSH program allows a community or group to designate members (from within the group) who may possess particular expertise in hunting to harvest wildlife resources on behalf of the members of the community or group. To take a caribou on behalf of another household (beneficiary), a hunter must carry both the beneficiary's and their own CSH caribou harvest ticket in the field while hunting. The harvested caribou must be delivered to the beneficiary. The beneficiary is responsible for all reporting requirements.

HUNT TERMS AND CONDITIONS

Customary and traditional uses of Nelchina caribou are thoroughly described in 2006-170-BOG and 2011-184-BOG. The Board of Game found that the subsistence pattern in the Copper Basin is characterized by thorough use of most of the harvested animal. Therefore, all participants in the Copper Basin Caribou CSH hunt must salvage for human consumption:

1. All edible meat from the frontquarters, hindquarters, ribs, neck, and backbone, as well as the heart, liver, kidneys, and fat; and
2. Prior to October 1, meat of the frontquarters, hindquarters, and ribs must remain naturally attached to the bones until delivered to the place where it is processed for human consumption.

The board also found that the subsistence pattern is characterized by meaningful communal sharing. At least one communal sharing event featuring caribou harvested under the terms of a Copper Basin CSH hunt must be held. A complete description of the event (date, location, number of participants, amount of meat shared, and so forth) must be included in the final hunt report, to be submitted by the group / community coordinator.

CUSTOMARY AND TRADITIONAL USE PATTERN

The edible products of caribou taken under the terms of a Copper Basin Caribou CSH hunt must be used for human consumption and may not be sold or offered for sale. In order to comply with 5 AAC 92.072 (c) (1) (F), the department must ensure that the applicable customary and traditional use patterns described in board findings are observed by subscribers, including meat sharing. Subscribers need not have already established the pattern of community use summarized below; however, by applying, subscribers will be certifying that they have read, understood, and will voluntarily attempt to participate in and establish the pattern of subsistence use described in the Unit 13 board findings summarized below:

1. Participation in the consistent pattern of noncommercial taking, use, and reliance on Nelchina caribou, Copper Basin moose and other local wild foods. The existing pattern of use has been established over many generations and is focused on the total aggregate of fish, wildlife, and plant resources in the Copper Basin CSH area.
2. Participation in the pattern of taking or use of wild resources from the Copper Basin CSH area that follows a seasonal use pattern of year-round harvest effort in the area, with harvests of moose and caribou by community members in both the fall and winter hunts, when legally permissible.
3. Participation in the pattern of taking or use of wild resources in the Copper Basin CSH area that includes methods and means of harvest characterized by efficiency and economy of effort and cost, especially taking advantage of the maximum opportunity to harvest, as efficiently as possible, a variety of usable species in the Copper Basin CSH area.

November 8, 2011

©ADF&G www.adfg.state.ak.us/copyright

N0033

2012-2013 Hunt conditions: Copper Basin CARIBOU CSH

Page 5 of 6

4. Participation in the pattern of taking or use of wild resources that occurs in the Copper Basin CSH area due to close ties to the area and a familiarity with the terrain and associated history of the Copper Basin CSH area.
5. Use of means of processing and preserving wild resources from the Copper Basin CSH area that have traditionally been used by past generations, including use of all of the parts required to be removed from the field under the terms of a Copper Basin Caribou CSH permit.
6. Participation in the pattern of taking or use of wild resources from the Copper Basin CSH area that includes the handing down of knowledge of hunting skills, values, and lore about the Copper Basin CSH area from generation to generation. The board considered it critical to the perpetuation of the customary and traditional use pattern to provide opportunities for the young and old to participate in subsistence activities; the board also found it extremely important to stress the need to pass on skills and knowledge associated with use of all parts of the harvested animal.
7. Participation in the pattern of taking wild resources from the Copper Basin CSH area in which the harvest is shared throughout the community, including customary trade, barter, and gift-giving.

In order to observe this pattern, a portion of the edible products of caribou taken under the terms of a Copper Basin Caribou CSH hunt should be primarily shared, in a meaningful way, with other members of the community or group. Hunters should also demonstrate a pattern of meaningful communal sharing that provides first for the needs of the community or group elders and disabled, as identified by the community or group. In addition, hunters who have harvested their first caribou should give a portion to other members of the community or group.
8. Participation in the pattern that includes taking, use, and reliance for subsistence purposes not only on Nelchina caribou and moose, but also on a wide variety of wild resources in the Copper Basin area.

REPORTING

Harvest ticket holders must mail or deliver Copper Basin CSH harvest reports to ADF&G within 5 days of taking the bag limit, or within 15 days of the close of the season, even if the hunter did not hunt or did not take an animal. If the season is closed early by emergency order, unsuccessful (and did not hunt) reports must be returned within 15 days of the closure. Hunters may also report online.

Failure to report may jeopardize sustained yield management of the Nelchina caribou herd and the future of the CSH hunt; therefore, failure to report according to this schedule may result in citation and/or placement of harvest ticket holders on the state Failure to Report (FTR) list.

To better address the subsistence needs of Copper Basin Caribou CSH participants, the board requested that all caribou harvested by CSH participants within the CSH area be accounted for, regardless of whether taken under federal or state regulations. All caribou taken by Copper Basin Caribou CSH participants within the CSH area will count against the up to 300 caribou allowed for the CSH hunt.

In order for the department to ensure that permittees have complied with all regulations addressing the terms and conditions of their Copper Basin Caribou CSH permit, as well as the customary and traditional use pattern described in 2006-170-BOG and 2011-184-BOG, and in order to gather additional data on subsistence uses, the community or group coordinator must submit an annual written report, which summarizes the group's member households' required reporting information as well as a description of the communal pattern observed by participants. The report must be postmarked by April 30. Additional supplemental reports can be submitted after April 30, prior to the deadline for Participant Applications (July 1). However, subsequent Copper Basin Caribou CSH group applications will not be approved until all reporting requirements are met. If no report or an incomplete report is received, the group will be ineligible to participate in subsequent Copper Basin Caribou CSH hunts. Group coordinators are

N0033

2012-2013 Hunt conditions: Copper Basin CARIBOU CSH

Page 6 of 6

encouraged to submit a complete written report as soon as possible to ensure adequate notice for subsequent group approval.

The written report must include, at a minimum:

1. A list of the names and harvest ticket numbers for those individuals whose bag limits were filled under the terms of a Copper Basin Caribou CSH permit; and
2. A list of the names and harvest ticket numbers of the beneficiaries whose bag limits were filled by a designated hunter under the terms of a Copper Basin Caribou CSH permit; and
3. The number of caribou taken in federal subsistence hunts by those hunters also participating in the Copper Basin Caribou CSH hunt; and
4. A specific description of how the community or group observed the customary and traditional use pattern described in 2006-170-BOG and 2011-184-BOG. The department will provide a reporting form to assist with this section of the report; however, a summary narrative is also required that includes a description of at least one meaningful communal sharing event.

Some information in these reports may be subject to state confidentiality laws.

N0034

| Submittal ID | Commenter | Title | Organization | Topic List | Comment |
|--------------|---------------|-----------|--------------------|---|---|
| N0034 | paul roderick | president | talkeetna air taxi | General (to the EIS), 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA | <p>This comment is submitted by Talkeetna Air Taxi (TAT) a FAR part 135 air taxi headquartered in Talkeetna, Alaska. TAT owns and operates 8 aircraft and is one of the largest air services in the area. The comments will concentrate on the proposed expansion of the Fox 3 MOA. Most of the clients we fly into the mountains and rivers in the Talkeetna area including the Talkeetna Mountains expect a natural pristine environment that is relatively free of pollution and noise. The user groups that frequent the Talkeetna Mountains are as follows: rafters on the Talkeetna River, climbers and skiers on the glaciers and high peaks in the Mount Sovereign area, hikers in the lower tundra mountains, hunters, and photographers. These user groups are very concerned with the expansion of the Fox MOA and feel this will potentially ruin their experience in the mountains. The central theme stems from both the low level flight potential (500ft) and the expansion of it. One of the great draws of the Talkeetna Mountains is that is is far from any large groups, a quiet environment, and relatively close to Talkeetna. It offers a Brooks Range type experience that is a fraction of the cost. We as an air service feel a need to protect this type of environment for there are few left. Once word gets out that it is in a hot MOA that is approved for low level ops with military aircraft its reputation could be ruined in short order. The next concern is potential conflict with our aircraft and the low level operations. We operate with military aircraft in the Susitna MOA and the Denali area. We have had conflict with fighters straying from the MOA and entering Denali Park. The concerning aspect is the aircraft are not tuned to the common frequency. We have complained over the years but there has not been any acknowledgement. We feel operations in the expanded FOX MOA will increase the risk of a potential mid-air and our pilots are very concerned. Hunters in town of Talkeetna have voiced concern about the low level operations by military aircraft. They feel this could disrupt caribou migration, breeding and even the hunt. Climbers and skiers are concerned about potentially being avalanched by the effects of low flying aircraft and sonic booms. As a pilot looking at an aviation map I am amazed there needs to be expansion to the MOAs.</p> <p>Galena, Stony, Susitna, Fox, Delta.....all consume hundreds of square miles! The proposed Susitna Dam has increased air traffic and should be addressed in your study. In closing we feel very strongly that the no action alternative should be chosen. Thanks.</p> |

Re: JPARC Modernization and Enhancement DEIS

Gentlemen:

Copper Country Alliance is a non-profit conservation organization serving the Copper River Basin and Wrangell Mountains area of Alaska. Most of our members live in the Copper Basin; the others are very familiar with the region. All share an appreciation for the region as it is: scenic and wild, with the chance to see interesting wildlife. Most of our members also engage in subsistence activities in the region. Following are our comments on the JPARC Modernization and Enhancement Draft Environmental Impact Statement (DEIS). Our comments are confined to the FOX and Paxson Military Operations Areas (MOAs).

We are completely opposed to Alternatives A and E in the JPARC Draft Environmental Impact Statement. We prefer the No Action Alternative, but only because no alternate was presented that would have addressed the current flagrant violations of horizontal and vertical airspace and of supersonic speeds below FAA limits.

DEIS FAILS TO ADDRESS SIGNIFICANT ISSUES THAT WERE RAISED IN SCOPING:

Failure to Discuss Violations by Air Force Jets

N0035

Airspace violations are not rare: Our members and others have observed Air Force jets flying below the required 5000 feet AGL in the Fox 3 MOA, training below 18,000 feet in the Paxon ATCAA, and flying at supersonic speeds when they are below required minimums. Our organization raised this issue in our scoping comments. The Bureau of Land Management documented specific incidents. (See v. II, A-45 and A-46.) I believe that other commenters also raised this issue. We have been unable to find any reference to this issue in the DEIS, other than including the BLM documents and mentioning the toll-free number that citizens can use to report jet noise. Noise is clearly not the only issue here, and the DEIS does not—as far as we can determine—disclose that there are violations.

Our organization's scoping comments specifically requested that this issue be addressed, and we suggested mitigations: "All alternatives should include monitoring and enforcement of flight levels and flight speeds. Random but frequent checks should be made of flight tapes. Look into the feasibility of beepers than warn pilots when they are below prescribed flight levels and when they are approaching Mach 1."

Failure to Address Important Cumulative Impacts***Susitna Dam:***

The proposed Susitna-Watana dam is a huge project for which the Federal Energy Regulatory Commission (FERC) is preparing an Environmental Impact Statement. It has strong backing from the state legislature, which in the summer of 2011 provided the Alaska Energy Authority with \$66 million to study it; therefore, it is "reasonably foreseeable." The dam's impacts to wildlife could be substantial, as evidenced by ADFG embarking on multi-year studies on the Nelchina caribou herd, moose, and ptarmigan, while other entities are conducting studies of potential impacts to migratory birds. The dam site would lie beneath the Fox 3 MOA, where this DEIS proposes to lower the minimum flight level from 5,000 feet above ground level (AGL) to 500 feet AGL. According to scoping comments provided by ADFG and USFW on the JPARC proposal, these low-level flights are of particular concern with regard to many wildlife species, including the moose, the Nelchina caribou herd, and migratory birds being studied for the Susitna-Watana project. Also, one of the proposed access roads, departing from the Denali Highway, underlies the Fox 3 MOA. Certainly this is a cumulative impact that should have been mentioned.

Mineral Exploration and Mining:

The DEIS (vol. I, page 3-59) addresses mining claims and active mines in the region. It depicts them in Figure 3-12. Curiously, it does not list any of them as having cumulative impacts in conjunction with the JPARC proposals. To take one example with which our organization is very familiar, Pure Nickel, Inc., has been conducting exploratory drilling on its "MAN" nickel/copper/platinum claims, which include important wintering and rutting grounds for the Nelchina caribou herd. This is of concern to resource managers. As the

N0035

Alaska Board of Game wrote in its March 26, 2008 letter to the Governor, "We recognize the potential for mineral extraction in this area and in associated mineral leases, but remain convinced the long-term value of maintaining wildlife habitat far outweighs the potential benefits of possible development projects known at this time." The claims area is also an important subsistence area and is a favorite destination for hikers, paddlers, photographers, mushers, and tour companies. To date, multinational ITOCHU has invested \$17 million on these claims, making it sufficiently foreseeable to deserve mention. As another example, the DEIS mentions active mining north of the Denali Highway at Valdez Creek, but does not discuss whether there might be cumulative impacts with regard to subsistence, recreation, or wildlife.

In spite of the all the above, the DEIS says, with regard to cumulative impacts to biological resources: **"Cumulative Impacts of JPARC Proposals with Other Non-Military Actions.** No substantive non-military actions have been identified for the areas under the proposed expanded Fox 3 or Paxson MOAs; therefore, contributions of non-military actions to cumulative effects in the Fox 3/Paxson MOA proposal area would be insignificant." (DEIS v. I, page 4-27)

Climate Change:

Our scoping comments stated, "Research is especially important for those species with small populations and/or special vulnerability to other stressors like climate change. Examples include wolverine and pika." The only reference that the DEIS makes to climate change is on page 4-17, where air quality is discussed. There is no mention of how implementation of Alternative A or E might interact with climate change to affect biological resources. For instance, how might low level flights and/or sonic booms affect denning wolverine?

DEIS UNDERSTATES IMPACTS:

Noise:

The DEIS gives 123 dB as the loudest noise that would be heard in the Fox 3 and Paxson MOAs during low-level (500 feet AGL). Presumably, this would be generated by subsonic flight, because supersonic flight is not supposed to be conducted below 5,000 feet AGL or 12,000 feet AGL. "This degree of noise would likely annoy or startle persons overflown," (DEIS v. I, page 3-79). However, according to the *Canadian Journal of Otolaryngology*, just 120 dB exposure can injure the ear. The Final EIS should acknowledge ear damage and return the minimum flight level to 5000 feet AGL to prevent such damage.

Within the DEIS, we have not found any information on the decibel level of a supersonic jet flying at 500 feet AGL or 1000 AGL. As documented by the Bureau of Land Management (DEIS v. II, A-25 and A-26), *supersonic flight already does occur* at 1000 feet AGL or even hundreds of feet AGL. "Annoy" and "startle," the words used in the DEIS, hardly describe the reactions of those exposed. "Terrify" is more accurate. I have experienced this myself while berry picking with a child a few miles east of the Fox 3 MOA, and I thought that

N0035

a bomb had dropped nearby. (See Copper Country Alliance Scoping Comments.) The Final EIS should acknowledge that these events occur and will become more common, should quantify the noise level, should describe impacts to wildlife and humans, and should describe the ways that it proposes to address the problem of too-low supersonic flight.

MITIGATIONS:

1. **Keep the minimum flight level at 5,000 feet AGL.** The proposed 500-foot AGL would put civil aviation in harm's way; disrupt wildlife at critical times; disrupt human activities such as subsistence, wildlife viewing, hiking, and paddling; and damage the ears of humans and wildlife.
2. **Enforce restrictions on pilots flying Air Force jets.** Violations of minimum flight level, MOA boundaries, and supersonic flight minimums have been rampant. Somewhere, the system is breaking down. Restrictions and the consequences of violations should be emphasized before each flight. Flights should be closely monitored. Discipline should be swift and certain. Foreign pilots who violate restrictions should be sent home.
3. **Conduct any supersonic operations at or above 5,000 feet AGL or 12,000 feet MSL, whichever is higher.**
4. **Create a civilian oversight group with members selected by affected communities and interest groups.** Meet at least quarterly to exchange information. Fund the meetings and participants' meeting-related expenses.
5. **Delineate and establish seasonal flight avoidance areas and overflight/operational restrictions over wildlife and other areas.** Solicit and take the advice of biologists in the Alaska Department of Fish and Game, the U.S. Fish and Wildlife Service, and the Bureau of Land Management.
6. **Establish a no-flight zone over the Delta and Gulkana Wild and Scenic Rivers and 10 miles on each side of them.** This means no flights, at any altitude.
7. **Establish a no-flight zone over the Denali and Richardson highways, and 10 miles on each side of them.** This means no flights, at any altitude.

Thank you for this opportunity to comment and for planned future opportunities.

Sincerely,

COPPER COUNTRY ALLIANCE

Re: JPARC Modernization and Enhancement EIS

ALCOM Public Affairs:

I am greatly concerned, in fact alarmed, by the proposal to enlarge the jet training areas (MOAs) to include Lake Louise, most of the Denali Highway including the Tangle Lakes region, and some of the Richardson Highway. The tremendous expansion of space is cause enough for objection, but the allowance of flights as low as 500 feet above ground level is unconscionable over this terrain. War planes are necessary and, in their own way, beautiful, but they do not mix with the character of this region and the values placed upon it by those who use it for recreation, hunting, fishing, camping, exploration, and the quest for quiet and solitude. The aerial invasion and blast of sound would harm and alarm both wildlife and humans.

The Delta and Gulkana Wild and Scenic Rivers, the beautiful and peaceful Tangle Lakes, the Denali Highway itself with its wild and expansive vistas, all are places dear to the souls of many people, both those who live in this area and those who visit, who find these regions valuable beyond price for the increasingly rare opportunities they give us to experience the world as it was created.

In the military's honorable quest to protect us, let's not damage those things that are truly worth protecting.

Thank you for your thoughtful consideration of these concerns.

Subject: Public Comment on Draft EIS for Modernization and Enhancement JPARC

7/5/12

Board of Directors
Coalition for Susitna Dam Alternatives (CSDA)

In the best interests of the public, CSDA wants to point out that under Cumulative Impacts, the draft has not mentioned the proposed Susitna Dam. This should be done. Include the following:

Proposed Susitna-Watana Hydroelectric Project

This is a megaproject that would develop a large footprint in the Fox 3 MOA. It is proposed to build a 700 to 880 foot dam at River Mile 184 of the Susitna River. There would be a permanent airport and a permanent road built. During the construction of the proposed project, there would be many airplane flights bringing workers and equipment into the area. In the next three years, there will be over 50 studies done in the area as part of the Federal Energy Regulatory Commission Licensing process and the NEPA process. The reservoir will be approximately 40 miles long by 2 miles wide and will be a focal point for increased human presence in the project area.

Subject: Joint Pacific Alaska Range Complex EIS Comment Submission

Dear Lieutenant General Atkins,

The Northern Alaska Environmental Center (NAEC) thanks you for the opportunity to submit comments on the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Environmental Impact Statement (EIS) on behalf of our organization and its members. Our non-profit conservation organization promotes conservation of the environment and sustainable resource stewardship in Interior and Arctic Alaska through education and advocacy. We have over 1,500 members most of whom live, work, and recreate in the areas that will be affected by the proposed JPARC activities.

Recommended Alternative

Based on the alternatives listed in the proposal thus far, we recommend the no action alternative. We will address in more detail some particular issues that affect the quality of life of Fairbanks members and elsewhere in the Interior of Alaska, which primarily involve the FOX 3 and Paxson MOA addition, Tanana Flats Training Area Roadway Access and expansion of the Proposed Realistic Live Ordnance Delivery west of the Donnelly Training Area. We also recommend consideration of a new alternative that would decrease level of existing impact in the national conservation areas which include preserve, refuge, and wild and scenic rivers, as well as throughout the Yukon River watershed.

FOX 3 MOA and Paxson MOA

The eastern Alaska Range is an important area to many of our members, who spend considerable time deep in the mountains. Many have cabins within FOX 3 and within the additions. Lowering AGL's from 5,000 to 500 feet is a dramatic change and one that has negative impacts to various user groups and potential impacts to wildlife. Planes flying at an altitude of 500ft would produce cumulative impacts to people and fish and wildlife from noise disturbance including human health and wildlife reproduction and energetic stresses, impacts to sport and subsistence hunting, fishing, and other activities, effects on federal and state conservation areas and other public lands, wild lands and wilderness values including solitude and intact ecological system integrity, recreation and tourism, effects on bush and commercial flight safety, and air and water quality impacts. We are also concerned

A 501 (c) (3) NOT-FOR-PROFIT ORGANIZATION

N0039

about the effects on Pacific salmon, migratory birds, marine mammals, and other wildlife that migrate from the Gulf of Alaska to sub-arctic and arctic habitats and may be affected by the Gulf of Alaska Temporary Maritime Activities Area.

Wildlife

As the EIS states, the Fox 3 MOAs and the new Paxson MOA include some of the largest hunting grounds for caribou as well as lambing and rutting areas for caribou and Dall sheep. It is vital that mitigation measures and flight restrictions be put into place to protect calving grounds, lambing areas, and rutting areas indicated in Figure 3-5 and 3-6. We support the establishment of a minimum overflight altitude of 3,000 feet AGL over the Delta and other Caribou Herd calving areas from May 15 to June 15. Judging by Table 3-11, not much caribou habitat has been spared in the Expanded Fox 3 MOA as 94% of the airspace consists of caribou habitat. We recommend measures to reduce this to 75% or less to protect this vital subsistence resource. The EIS only cites one study of the impacts on Dall Sheep. One study is inadequate. In terms of wildlife, NAEC believes Alternative E superior to Alternative A because it impacts less acreage of wildlife habitat. The No Action Alternative is our preferred alternative.

The EIS should also consider impacts on smaller, less iconic animals and migratory birds. Figure 3-7 is inadequate in showing the diversity of Migratory Waterfowl Habitat underlying the Fox 3 and Paxson MOAs. Since the EIS states that studies have shown that the visual aspect and peak noise level (Lpk) of overflights diminish rapidly with increasing altitude of overflight, we recommend that you raise the 500 foot AGL to at least 1,000 feet in this critical waterfowl area.

Hunting and Recreation

Hunters are perhaps the most common user group throughout the eastern Alaska Range. AGL's of 500 feet will certainly impact the experience of their hunt -- from the loss of a wilderness experience to the potential and unpredictable herd scattering that could occur when an aircraft traveling at or near mach speeds nears by. The proposal would affect recreational visitors to the Denali Highway -- including its surrounding public lands -- which is a favorite area to bring the important tourism visitor sector "visiting friends and relatives" as well as independent travelers and others. NAEC urges the Air Force to consider limiting air traffic during the months that ADF&G data has shown high visitor use and hunter success (namely mid-August, late September, and end of October to early November). The Paxson MOA would certainly make operations more difficult for local pilots and their clients, wildlife, and ground travelers.

Mountaineering

Mountaineering is another common use for which lowered AGL's and increased MOA's would bring negative impacts. Sonic booms from jets have been known to trigger avalanches on slopes that otherwise would remain stable for mountaineers. In addition, jets flying so close to mountaineers -- who can often be in serious situations in the first place -- presents unnecessary stresses, compromises safety, and also greatly detracts from the experience of solitude which is best exemplified in our great mountain ranges. Such low AGL's may also pose problems for bush pilots who would normally be flying under the MOA's, adding extra expense to traveler's budgets if they are required to add more miles to their flight plans or simply not be able to go. We recommend that the EIS include an analysis of such comments and explain the process for the public to provide documentation of such events.

N0039**Special Areas**

We are especially concerned about this expansion southward to the Lake Louise area and farther eastward on the Denali Highway. In addition to the greater Eastern Alaska Range, there would be substantial impacts to the Tangle Lakes – a very popular birdwatching, camping, hunting, fishing, and paddling destination not currently affected by any MOAs. The proposed 500 foot AGL's would certainly alter the experience of users there, as well as potential stresses to the Nelchina Caribou Herd, which relies on that region for wintering habitat. Many of our members have publicly spoken out about designating the area as a State Wildlife Refuge. The proposed 500 foot AGL's are not compatible with that type of use and land management. We recommend that Tangle Lakes be designated an avoidance area as Lake Louise is proposed to be to minimize impact on residents. This area also includes the Tangle Lakes Archeological District as well as the Delta National Wild & Scenic River.

Noise Pollution

In Table 1-10 of the EIS, the FOX 3 MOA and Paxson MOA are noted to have potential for significant adverse impacts on socioeconomics, noise, safety and land use. Under Alternative A, the noise pollution in the Paxson MOA would increase substantially, from 37 to 54 dB L and noise pollution in FOX 3 MOA would increase from 29 to 49 dB L. In Alternative E, the Paxson levels would increase from 37 to 54 dB L and Fox from 39 to 50 dB L. For these reasons, we do not find that the benefits outweigh the risks in the proposed plan for the addition to FOX 3 and MOA, and therefore request No Action be taken regarding these areas. The military already controls large swaths of airspace and could certainly find a way to use existing resources to fit their mission.

We request that No Action be taken regarding the proposed plan for a Paxson MOA.

Tanana Flats Training Area Roadway Access

The Tanana River is a tremendous resource near and dear to the inhabitants of Alaska's Interior. It is a major tributary of the Yukon River and a vital salmon subsistence river, waterfowl corridor, and transportation corridor for recreationalists and local residents of the interior.

Wetlands and Water

Table 1-10 of the EIS notes that the Tanana Flats Training Area Roadway Access comes with the potential for significant adverse impacts on physical resources including soils and permafrost, water resources, biological resources, and wetlands. We are concerned about potential impacts of the proposed roadway project on the delicate biological balance of this river downstream. Specifically, as the EIS admits, hydrologic studies are needed to ensure that culverts installed along the proposed roads would not produce a discernible change in the hydrologic flow regime of the area. We ask that you consider the potential for significant adverse impacts on subsistence for this project.

The area surrounding the Tanana is wetlands-rich. Sixty-five percent of the Tanana Flats Training Area is wetlands and special care must be taken to preserve the ecosystem integrity of this area to mitigate impacts downstream. Detailed wetlands surveys should be required before this project moves forward. We urge developers to follow the recommended site selection criteria and BMPs in section

N0039

3.8.6 to reduce impacts on water and wetland quality. Sensitive areas for Raptors should be included in the list of criteria developed to reduce adverse effects on page 3-381

Living/Recreating on the Tanana

Many of our members canoe and motor between Fairbanks and Nenana as a recreational and subsistence activity. The population of Fairbanks uses this area heavily for summer salmon fishing and fall moose hunting. Members living on this stretch of the river have complained of shocking noise pollution and disturbance from what they have described as “bombs” in the Tanana Flats Training Area on the East Bank of the river. People on the West Bank of the Tanana should be considered in the Affected Environment section of Socioeconomic impacts.

Yukon River Watershed Impacts

The upper Yukon River watershed already has a high concentration of MOAs (Yukon 2, 3, 4, 5) that can result in adverse impacts to wildlife, recreation, and subsistence resources and users and noise disturbance that is incompatible with the purposes of Yukon-Charley National Preserve, Yukon Flats National Wildlife Refuge, part of Arctic National Wildlife Refuge, and the Birch Creek, Charley, and 40-mile Wild & Scenic Rivers, and we recommend consideration of a new alternative that would decrease level of existing impact in the conservation areas and throughout the Yukon River watershed.

Realistic Live Ordnance Delivery

We believe the Proposed Realistic Live Ordnance Delivery west of the Donnelly Training Facility is also unnecessary. We are opposed to additional live ordnance designations and feel those activities should be limited to existing facilities. We have heard from members whose planned expeditions to exit the peaks of the Eastern Alaska Range have already been thwarted upon learning about the restrictions that made it illegal to float down Delta Creek. We are opposed to any additional restrictions that undermine Alaskans’ ability to enjoy their surrounding landscapes.

General Comments

Document and Maps

The DVD copies of this document were fairly easy to navigate and we appreciate the attention put to that. We similarly appreciate Figure 3-10 (Land Status and Special Use Areas in the Fox 3 MOA Expansion and New Paxson MOA Proposal area) in that it delineates land use categories but feel the EIS could go much farther in clearly identifying conservation areas by their individual place names, rather than slight shifts in colors and dash marks. Because the proposed areas encompass such a complicated patchwork of land designations, we recommend that all maps show the boundaries of federal and state conservation areas. This should include parks, refuges, conservation areas, recreation areas, National Wild and Scenic River, proposed wilderness areas, state habitat areas. We believe this will help the public understand incompatible uses and to assess impacts as well as better assess mitigation such as additional seasonal restrictions to avoid effects on wildlife reproduction, migrations, and other sensitive activities.

Energy Conservation and Renewable Energy:

Energy conservation is a core value of our organization. We support and applaud the plan’s efforts to reduce fuel consumption and increase efficiency. We applaud the inclusion of figures like 3-13 that

N0039

shows the Renewable Resources in the Fox 3 MOA and New Paxon MOA Proposal Area, although we do not sense meaningful integration of this data into the EIS or purpose of the expansion. We do not, however think that the most impactful savings can come at the cost of AGL reductions to 500 feet, a height that is jarring and disruptive to wilderness qualities of solitude and quiet that we prize Alaska's remote areas for.

If the military is truly concerned with energy efficiency, it seems that they should do everything in their power to base flights more locally. There is much energy used getting planes to the Yukon-Charlie area from Fairbanks and Anchorage. If the Eielson Air force Base was moved to Anchorage, there would be a huge increase in fuel costs associated with getting the planes to interior-based flight areas. We request that the cumulative impacts of this potential move be addressed in the EIS.

Noise Pollution

We believe additional night hours on existing MOA's will pose great impacts to residents, recreational and subsistence users and wildlife. We ask that the Air Force exercise some restraint and limit its noise impacts on these places by using existing policy regarding night hours. None of the alternatives adequately address the cumulative impacts of the existing MOA night flying disruptions. In the materials submitted to the public, there is no definition of what a "documented noise sensitive area" is or what restrictions, if any, might be associated with these areas.

Flight Numbers and Hours

While there are alternatives described with different extensions of Proposed Night Joint Training for all training purposes versus major flying exercise, there is no indication of the total number of flights anticipated for each alternative. Alternatives should also be considered that may reduce flight hours or numbers of flights in existing MOAs in consideration of the cumulative impacts.

Thank you for taking the time to read our thoughts on this important matter. We hope to be involved in the future, as do many of our colleagues.

Sincerely,

Jenna Hertz,
Arctic Grassroots Coordinator

Re: Draft Environment Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex

The Experimental Aircraft Association (EAA), on behalf of over 176,000 general aviation pilots and aviation enthusiasts nationwide, including more than 5,000 members in Alaska, submits the following response to the U.S. Department of Defense (DoD) in regards to the Draft Environmental Impact Statement (DEIS) for the expansion of the Joint Pacific Alaska Range Complex (JPARC).

EAA concurs with the concern of its members who live, work, and fly in the areas included in the DEIS. The impact of the proposed expansion of the JPARC Military Operating Areas (MOAs) to general aviation must be considered due to the importance of general aviation to the Alaskan civilian population. Some of the busiest airspace for general aviation traffic in Alaska lies within the areas included in the proposed expansion. Furthermore, the JPARC lies in close proximity to three of Alaska's largest population centers: Anchorage, Fairbanks and the Mat Su Borough. Busy air routes which link these population centers and their surrounding areas will be impacted by the expansion of the MOAs.

Included in the DEIS is the lateral and vertical expansion of the Fox 3 MOA and the addition of the new "Paxon" MOA. The lowering of the Fox 3 MOA's floor from 5,000 feet AGL to 500 feet AGL significantly diminishes safety and increases the risk of collision between the small general aviation aircraft that frequent this airspace and fast moving military jet traffic. This large decrease in the MOA's floor elevation also severely restricts general aviation pilots to flying at low altitudes which are unrealistic and unsafe in mountainous terrain. This restriction greatly reduces a general aviation pilot's options in the event of an emergency such as an engine failure. Due to these risks, the floor of the Fox 3 MOA should be kept at 5,000 feet AGL and its boundaries should be extended the least amount possible.

The proposed Paxon MOA would also essentially cut off major portions of important air routes that link Southern and Northern Alaska. High amounts of general aviation traffic would be restricted to small corridors, increasing the likelihood of mid-air collisions. The proposed Paxon MOA would also cover a heavily utilized recreational and hunting area. The Paxon MOA should

P.O. BOX 3086 OSHKOSH, WI 54903-3086 • Tel 920.426.6522 • Fax 920.426.6560 • WWW.EAA.ORG

N0040

either be stricken from the proposal completely or restricted to high-altitude operations to minimize risks to general aviation.

These proposals as well as others included in the DEIS are far-reaching and would have a profound impact on general aviation in Southern Alaska. The impact to the livelihoods of Alaskans living in the areas that will be affected by these proposed changes should be carefully considered before any decisions are made regarding the future of the JPARC.

EAA is grateful for the opportunity to comment on this important issue. We kindly ask the DoD to consider the concerns of the Alaskan general aviation community before approving these proposals. We look forward to a reasonable solution so that the needs of both the United States military and the Alaskan general aviation community are met.

Thank you for considering these comments. Please contact us at 920-426-6103 if you have any questions.

Re: DRAFT EIS comments on the proposed Joint Pacific Alaska Range Complex Expansion

Dear Sirs,

The Alaska Airmen's Association is a statewide organization with 2500 members dedicated to supporting safe aviation in Alaska. In this letter we hope to define the requirements of the civil aviation community and elucidate industry concerns. Specific areas of the proposal include the expansion of the Fox 3 MOA, the proposed Paxson MOA Low Altitude Structure, IFR Access to MOA Airspace, restricted airspace over the Battle Area Complex south of Delta Junction and the proposed UAV Corridors. Given the importance of the aviation transportation system for all Alaskans we trust the military acknowledges the requirements of the civil aviation community for the safety of all users.

The proposed expansion of the Fox 3 MOA intrudes both laterally and vertically in to an area of Alaska highly used by the general public. Expanding a MOA to within 30 miles of Alaska's fastest growing populace is precarious. The Mat-Su Valley is home to over 230 landing areas and to over 2,000 of Alaska's general aviation pilots. The Lake Louise recreation area is one of the most frequented destinations for all Alaskans who enjoy hunting, fishing, hiking, boating but most importantly for the quiet and pristine outdoor experience. Military aircraft traveling in excess of 500kts and/or 500' would not only endanger civil aviation traffic but destroy Alaska's quintessence.

The same argument applies to the Paxson MOA Low Altitude proposal. This area is a major VFR route connecting northern Alaska with the south central and eastern regions of the state. Variable weather in this area eliminates the discussion of corridors that would create congested, unsafe situations for aviation traffic.

MOA's today prohibit IFR access by civilian aircraft during exercises. This not only affects the economic viability of communities with and outside of these areas but history shows it has been difficult even obtaining access during emergency situations. This results in an even bigger concern: the loss of safety for VFR operators who are being encouraged to use low-level civil corridors. If larger, IFR capable aircraft are forced to use the VFR corridor during these exercises, this puts these larger, faster aircraft on the same flight path as our smaller general aviation aircraft at low altitude, which is a loss of safety for all civil operators. We oppose any additional airspace that hinders IFR traffic and the negatively impacts our communities.

N0041

JUL-9-2012 08:51A FROM: AIRMEN'S ASSOCIATION 9072451259

TO: 5525411

P.2

Five years ago the Alaska Airmen participated in an EIS process that resulted in the building of the Battle Area Complex south of Delta Junction. One of the concerns at the time was the possibility of restricted air space over the complex. We were assured that this would never be a requirement. Our position has not changed even though the military's planned use of airborne weapons release has changed. We oppose restricted airspace over an area where weather, terrain, and mountain passes creates a challenging and potentially unsafe situation.

The proposals to establish more restricted airspace for live ordinance delivery further impacts the Fairbanks, Delta Junction areas and north even more. Again, the areas affected are accessed by Alaskans utilizing these areas for mining, hunting and recreation. Existing restricted areas already have a negative impact to civilian communities.

We understand Unmanned Aerial Vehicles are the future and that the military would like to integrate these into their training. Corridors allowing UAV's to access training areas is an enormous safety concern. Currently the National Airspace System does not have a mechanism that allows UAV's to harmoniously fly and communicate in the same airspace as civil aircraft. Until true sense and avoid capability is defined and developed we need to side with safety and oppose these corridors as proposed.

Alaska already has one of the largest areas of airspace in the world secured for training. The Alaska Airmen's Association supports our military and understands the need for training; however we are concerned for other users of this airspace. Through the scoping and public meetings it was explained that the military needed such low altitudes and expanded areas in order to train for existing and future threats to the 5th generation fighters and to train with new weapons systems. It was also stated that this redesign was based on saving transient time and fuel to reach the training areas. While not part of this proposal, we ask the military to look at all Alaska airspace they currently hold and release airspace that is not being effectively utilized. We also question the reasoning and claims for the proposed F-16 move to JBER as they seem to contradict the motives of the JPARC redesign.

We do know that improved and consistent communication that includes real-time information for pilots sharing this airspace needs to occur. Implementing a statewide Special Use Airspace Information Systems (SUAIS) as well as improving the existing service are essential to operating an airspace complex of this size. Radio coverage and communication remains unreliable in the eastern areas of the current complex. Beside improvements to the current program, we would like alternatives to be explored for communicating the status of the MOA's improving access in the ranges for civil aircraft when not in use. We ask that the floor of current and proposed airspace be determined based on communication coverage for SUAIS.

Thank you for the opportunity to comment. We ask that the Military, the FAA and the aviation community continue to work together until we find a solution.

Sincerely,

Adam White
President

July 8, 2012

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506

Dear Sirs:

The Alaskan Aviation Safety Foundation (AASF) is a non-profit membership driven organization with the central goal to promote aviation safety in Alaska. We had a team review the Joint Pacific Alaska Range Complex (JPARC) Draft Environmental Impact Statement (DEIS) document dated March 2012, which contains proposals for modernizing and changing various features of the airspace and training ranges in the JPARC. We offer the following comments and observations.

Purpose and Need

The National Environmental Policy Act (NEPA) regarding Purpose and Need (40 CFR §1502.13) states, "The statement shall briefly specify the underlying purpose and need to which the agency is responding in proposing the alternatives including the proposed action." In this DEIS document, the purpose statement (section 1.2) does not document the purpose of the DEIS as we understand it, which is to provide comprehensive training areas for current and future military training. The AASF supports providing comprehensive training areas, but the AASF is not supportive of the purpose stated in the document. We suggest restructuring the purpose to focus on current and future training areas. Section 1.3 containing the Need statement is not focused and does not include the proposed actions as required in §1502.13. We found it extremely difficult, and at times not possible, to connect a need with the proposed actions found later in the document.

The following is our analysis and comment on each of the proposed actions.

Fox 3 MOA Expansion and New Paxon MOA

The USAF has extensive MOAs in Alaska, and in order to justify an expansion NEPA requires an explanation of why the existing MOAs are not adequate. The alternatives section states there is a need for more air space without discussing why the existing MOAs are inadequate, and fails to connect to the stated need in section 1.3. In addition the purpose and need statements in sections 1.2 and 1.3 do not appear to support either alternative A or E. As such, the AASF

N0042

requires additional justification and at this time opposes both the Fox 3 MOA Expansion and the New Paxon MOA.

Section 2.1.1 says the need is to provide a 180 x 60 nautical mile airspace. We submit that the Yukon MOAs already provide more than three times this airspace. There is no explanation why this existing airspace will not provide a realistic training environment that meets the USAF training need.

Section 3.1.1.4 acknowledges adverse impacts, but in NEPA terminology we submit that these impacts are significant and require mitigation. Table ES-2 codes these as significant, which is inconsistent with section 3.1.1.4. The wording in this section does not address mitigation, rather it says (paraphrasing from the section) that the FAA and USAF will study impacts and mitigation measures, and work with civil aviation users to resolve issues. We expect a DEIS to document impacts, rate them significant or not significant, and if significant to propose adequate mitigation. If the SUAIS is proposed as a mitigation measure, we expect the DEIS to show us the translator locations and coverage areas.

Section 3.1.3 Safety is of utmost concern to the AASF. Proposed expansion of the MOAs down to 500 ft will increase the collision risk between civil and military aircraft, aircraft mishap potential, and bird/wildlife-aircraft strike hazards. The AASF opposes this expansion of these MOAs down to 500 ft due to this decrease in both civil and military flight safety. In addition, Table ES-2 codes Safety –Flight for the Fox 3 MOA Expansion and New Paxon MOA as “Potential for significant adverse impacts; Requires management actions or mitigations to avoid or reduce impacts.” While in section 3.1.3.4 Mitigations provides some existing programs/procedures, but states “No further mitigations are proposed for this resource.” This is unacceptable to the AASF, and appears contradictory to the executive summary.

Other impact areas such as noise, biological resources, land use, infrastructure, subsistence, and economic justice likewise need concrete mitigation measures identified.

Realistic Live Ordnance Delivery

The alternatives section discusses the need for more space, mostly “As the technology for new weapons systems continues to evolve, the ground footprint for ordnance delivery continues to expand...” So again we have a need statement in the alternatives section rather than in the need section. The need statement is vague, and appears more as an effort to secure some land now that may or may not be needed in the future. The existing MOAs constitute a huge amount of land and air. What we fail to find, and expect to find in a DEIS analysis, is exactly how much is needed now, why the existing MOAs are not adequate, and a reasonable projection of how much will be needed in the future. There may be some further justification hidden in the lengthy Affected Environment and Environmental Consequences section, but as written we could not connect the sections of this NEPA document into a coherent and well thought out proposal.

N0042

Section 3.2.1.4 looks to be a copy of the airspace mitigation section from the Fox 3 MOA Expansion section. As such our comments above apply to this section too.

Battle Area Complex Restricted Area Addition

The AASF rejects this proposal because the impacts to civil aviation safety are significant, and the proposed mitigation is inadequate. Existing Restricted Area 2202 to the west already forces civil traffic out of the most desirable terrain route to and from Isabel Pass. Isabel Pass includes the Richardson Highway VFR corridor connecting the northern half of the state to south central and south eastern Alaska. Winds and highly variable weather associated with the Alaska Range and the mountain pass make it impractical to confine civil traffic to a single, narrow corridor in this area. During previous EIS analysis of USAF expansion proposals, the aviation community raised the issue about the possible need for restricted airspace. While this is easy expansion area for the military, such expansion causes significant impacts to civil aviation. Section 3.3.1.4 acknowledges potential adverse impacts on airspace. As we stated above, we submit this is very significant by any reasonable measure. Mitigation measures offered are to study the issues, which is not acceptable. Disregard of the NEPA process to identify and mitigate significant impacts causes us distress. The USAF has stated they want to work with us, but this proposal disregards such working together for the benefit of all. The military has other options and this DEIS must explore these other options in detail.

Expansion of Restricted Area R-2205

In general the expansion of R-2205 follows recommendations we have made in comments to previous environmental documents. We remain concerned that sections such as 3.4.1.4 acknowledge potential adverse impacts and the mitigation is to study the issues. This does not adequately comply with the NEPA process.

Night Joint Training

In general we support the need for adequate night training. As aviators we understand this issue. We also find that we need to remind the USAF that noise impacts on the human environment are recognized to be larger at night. The FAA noise analysis process applies a 10 decibel penalty to night noise impacts. Section 3.5.2.4 does not acknowledge this fact. Additional mitigation may be required. We also find it curious that the USAF has not applied administrative relief to your own rules for aviation currency as a way to fix the problem. We would like this DEIS to discuss the potential to administratively modify the USAF rules for pilot night currency.

Unmanned Aerial Vehicle Access

We understand the Military's desire to establish UAV training areas. Furthermore we agree with the airspace analysis paragraph 3.6.1.4 that there are adverse and significant impacts, however this section does not offer any clear mitigation for these adverse and significant impacts. We

N0042

submit aviation safety is likewise impacted. Therefore, based on the airspace management and safety sections we find cause to oppose the proposal.

Missile Live-Fire for AIM-9 and AIM-120

The AASF does not offer any constructive comments. We do find it curious that the impact area is relatively close to Kodiak Island, and not aimed for impact in the southeast portion of the area. We suspect there are reasons that are not articulated in the document, and a DEIS should articulate such reasons.

Further Comments

The AASF has a long history of working with the USAF to provide aviation safety for all users, civilian and military. Our volunteers have always tried to provide fair and balanced comments to USAF proposals. Our membership contains many current and former members of the military. We value the USAF as a legitimate user of the Alaskan airspace, and desire to provide airspace adequate to meet the USAF training needs. With that said, our team struggled to analyze and comment on this DEIS document. Some drawings and submittals have been sub-standard and difficult to read and analyze. This document was 655 pages long, rather than the 300 pages codified in NEPA §1502.7. There are discontinuities between the purpose, need, alternatives, affected environment, and environmental consequences, and we were not able to capture and comment on all of them. A DEIS document compiled to meet the NEPA code should be well laid out and the required sections connected to form a comprehensive and understandable program, and we found this document to be lacking in this regard.

Use of the Naknek, Stony, Galena, and Susitna MOAs are currently part of the military training options for Alaska. From our perspective the Naknek and Stony MOAs provide an alternative to meet the need for expansion of the Fox 3 MOA. Yet their use was not addressed in this document. Again our stated goal is to help the USAF acquire the area needed to meet your training needs, but we are not agreeable to have the USAF keep or bank MOAs all over Alaska that may or may not be needed in the future. Please address the total MOA need in the final EIS.

In summary because of the deficiencies in this DEIS document, the AASF submits this DEIS should be rewritten to follow 14 CFR 1500-1508, also known as the NEPA, and resubmitted. The need still exists for adequate training airspace and ground surface and we look forward to working with the USAF to identify needs and meet those needs.

Respectfully submitted on behalf of the Board of the Alaskan Aviation Safety Foundation.

Carl Siebe, Vice Chairman

RE: Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training areas in the Joint Pacific Alaska Range Complex

To whom it may concern:

As a major air carrier serving the community of Fairbanks and a daily user of the airspace surrounding the Joint Pacific Alaska Range Complex, Alaska Airlines appreciates the opportunity to provide comments on the Draft Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex. The following are our concerns with this proposal:

FOX 3 MOA Expansion and New PAXON MOA Affecting High Altitude Jet Aircraft

Alaska Airlines regularly files over Northway via J502 between Seattle and Fairbanks. We rely on the most direct routing to ensure profitability and schedule reliability. Under the existing MOA/ATCAA activation, we incur regular and costly reroutes when forced to file via the 63°N corridor due to the J502 route being closed to IFR traffic. Any additional impact posed by an expanded MOA/ATCAA might prove unsustainable for our operation. As Alaska files and flies consistent and repeatable flight paths via advanced navigation methods, it is conceivable that an enhanced corridor for High Altitude IFR traffic be created that allows efficient transit through military airspace.

Expand Restricted Area R2205, Including the Digital Multipurpose Training Range

As proposed, the expanded R2205 is in the vicinity of the primary arrival and departure Airway (J502). This airspace expansion must be analyzed with consideration of the Fairbanks RNAV SIDs, STARs and RNAV (RNP) approach procedures slated for implementation later this year. All impacts stated in the Draft EIS are based on existing flight tracks and do not consider these new arrival and departure tracks.

Proposed Remotely Piloted Aircraft (RPA)/Unmanned Aerial Vehicle (UAV) corridors

The UAV corridors could pose a significant impact to Alaska Airline's operation by restricting essential arrival and departure paths to Fairbanks International. Alaska Airlines opposes the development of these corridors due to the further restriction of access to Fairbanks International.

BOX 68900 SEATTLE, WA 98168-0900/206-433-3200

N0043

Consideration of Future Airspace and Procedure Enhancements

Significant FAA and Industry resources have been deployed to complete several RNAV Optimized Profile Descents, RNAV Departure Procedures, and RNAV (RNP) Approach Procedures at FAI – all scheduled for full implementation in September, 2012. These new procedures are necessary to ensure efficient operations for all capable users and align with the FAA's NextGen initiative. Alaska Airlines feels it is essential that these arrival and departure tracks be considered in the EIS study in effort to aid in impact analysis and developing mitigation strategies.

Missile Live Fire For AIM-9 And AIM-120 In The Gulf Of Alaska

Alaska Airlines transits the Gulf of Alaska between the Hawaiian Islands and Anchorage and the Lower 48 States and Anchorage. As we have recently started to take advantage of more direct over-water routing between the lower 48 and Anchorage, the Draft EIS does not directly address the impact that this proposal has on existing Gulf of Alaska traffic. The EIS must include this information in order to fully analyze the impact of the proposal.

Cumulative Impacts

The cumulative impacts of adding further restrictions to airspace that is already limited by MOAs and ATCAAs in the State of Alaska needs to be identified and addressed by providing data on both direct and indirect impacts. Other elements of the JPARC, such as Stony, Naknek, Susitna, and Galena need to be evaluated in conjunction with the JPARC expansion EIS and determine if they are still necessary to meet modern training needs. Because Alaska provides "the largest available land, air and sea training in the world", expansion of JPARC should identify ways to offset impacts of other current military airspace. Evaluating the JPARC Expansion proposal independently of existing military airspace does not allow for consideration of the cumulative impacts to civil airspace users throughout the State of Alaska.

Thank you for considering our comments on the Draft EIS for the Joint Pacific Alaska Range Complex. Alaska Airlines supports the United States military and their need to train realistically. We look forward to close collaboration with the FAA, DoD, and other system users to support this need while ensuring an equitable solution for all users of the NAS.

Sincerely,

Steve Baker

JBER, AK 99506

Re: Comments on the JPARC EIS by the National Outdoor Leadership School

To Whom It May Concern:

The National Outdoor Leadership School appreciates this opportunity to provide comments during the public comment stage of the Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC). As an outfitter running extended backcountry expeditions throughout the state of Alaska, we closely follow proposed projects that have the potential to affect the wilderness experience that our students expect.

NOLS has been operating in Alaska since the school established its base near Palmer in 1971. Since then, thousands of students have experienced the world-class wilderness opportunities available across this vast state through backpacking, sea kayaking, and mountaineering opportunities provided through our school.

The Talkeetnas in particular are a core destination for NOLS backpacking and mountaineering courses. With a strong wilderness feel, a quiet setting, good wildlife viewing opportunities, and a close proximity to NOLS Alaska, these mountains are an excellent fit for our program. Each year, NOLS runs 10-15 courses in the area, totaling approximately 5,000 user days. Our season runs from mid-May through mid-August. Other operators value the Talkeetnas as an operating area as well, including Alaska Pacific University. Furthermore, the area is very popular during hunting season, especially in August and September, and many local guides bring clients to the area to harvest from the big game populations found there.

The existing Fox 3 Military Operations Area (MOA) overlays a major portion of our operations in the Talkeetnas. At current use levels, and with the existing flight boundary at 5,000 feet above ground level (AGL), military exercises do not significantly impact our courses. It is not uncommon for a course in the Talkeetnas to hear sonic booms multiple times on a course—a jarring experience for any wilderness traveler, and one that would only be amplified were the flight level boundary reduced to 500 feet.

N0044

Changes associated with the proposed actions, however, would negatively impact NOLS operations in the Talkeetnas. Specifically, aspects of the proposed Fox 3 MOA expansion and the proposed Paxon MOA will impede the quality of our courses, and may in fact impede our ability to support our courses with aircraft. The significant expansion in boundaries, the proposed lower floor boundary of 500 feet AGL, and the expectation of increased frequency of training exercises will combine to have a major impact on NOLS and other operators in the area.

The first and most obvious concern related to the JPARC EIS is that of a diminished wilderness experience for NOLS students due to the increased presence of frequent, low-flying aircraft, and the associated visual and aural impacts on both our courses and on the wildlife of the area. Such a dramatic change in the wilderness feel of the area would not only diminish the quality of the experience for students on wilderness courses, but would also discourage future potential students from enrolling, affecting our bottom line. Our clientele—most of whom come from outside Alaska and seek out our courses for a backcountry adventure in The Last Frontier—anticipate natural quiet, an absence of human impact, and abundant wildlife.

Beyond big game like moose, caribou, Dall's sheep, and brown bear, the Talkeetnas are a thriving habitat for birds, including ducks, geese, trumpeter swans, and golden and bald eagles. Wolverines also call the area home. Though on-the-ground impacts of the project may be minimal, significant adverse impacts on the flora and fauna have been identified (page 3-47). Even with mitigation efforts the biological resources of the area may see lasting damage. We appreciate the airspace modification to conduct supersonic operations at or above 5,000 feet AGL or 12,000 feet MSL, whichever is higher, so as to reduce their aural impacts (page 3-50). We look forward to seeing a more detailed plan for monitoring effects of military training on select wildlife species (especially herd animals, waterfowl, and raptors) as described on page 3-51 in the final EIS. We would also welcome a detailed plan for monitoring the effects of military training on visitors to the area.

Secondly, there is a potential for complications with private flights, which are essential to an extended NOLS wilderness expedition in these mountains. Courses in the Talkeetnas are typically re-routed by bush plane, and if there is a medical emergency, airplanes or helicopters are often the best options for evacuation. In public meetings, there have been assurances that private flights could continue. However, "...Scoping and other informal indicators suggest that an increasing segment of this aviation community may elect to avoid an active MOA. This may create impacts if these pilots would cancel or delay their flights, or otherwise fly increased travel distances around an active MOA to avoid this active airspace..." (page 3-18). We look forward to an explicit plan for dealing with planned and emergency flights in the proposed Fox and Paxton MOA expansions.

N0044

As the final EIS is developed, we encourage planners to consider reducing the size of the Fox 3 and Paxton MOAs and to consider keeping the boundary at 5,000 feet AGL in popular backcountry zones. This is just one opportunity to mitigate and/or minimize the impacts on backcountry travelers.

During scoping, we supported Alternative C, which included the Fox 3 MOA expansion (the proposed Fox 3,4,5, and 6 MOAs) without the low-altitude MOA. Though it was not clear at the time, we also asked that the proposed Paxton MOA also maintain a boundary of 5,000 feet AGL. If the Alaska Command requires a zone for low-altitude exercises, NOLS would be least impacted in the proposed Fox 6 MOA, and the southern half of the proposed Paxton MOA.

Because in the draft EIS only Alternatives A, E, and No Action are explored, we feel compelled to suggest a compromise. With adjustments as specified above, we could support a revised Alternative E. Though we recognize that the Alaskan Command is seeking to respond to public comment by amending the southern border of the Fox 3 MOA in Alternative E, this change will not reduce the impacts of the project on NOLS courses significantly enough for us to support this alternative. We anticipate that this alternative that would allow us to conduct our courses with few noticeable impacts if the adjustments specified above were adopted into Alternative E.

Lastly, we encourage the Alaskan Command to explore the possibility of alerting the public to upcoming exercises as described on page 3-17, preferably several weeks in advance. In the case of NOLS, this advanced notice would give us an opportunity to alert our courses in the field, and would give our instructors a chance to make any necessary preparations.

Thank you for your careful consideration of these comments. In a land as vast and untrammelled as Alaska, there should be room for everybody. If the concerns of all stakeholders are given careful consideration, and if the spirit of cooperation and balance is preserved in this JPARC EIS process, there is reasonable hope that we might reach an amicable compromise. Please do not hesitate to contact us with any further questions or concerns.

Sincerely,

Janeen Hutchins

Re: Comments on Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement – Draft Environmental Impact Statement

To Whom It May Concern:

The Resource Development Council (RDC) is writing in response to the request for comments and information for the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft Environmental Impact Statement (EIS).

RDC is a statewide business association comprised of individuals and companies from Alaska's oil and gas, mining, forest products, tourism and fisheries industries. RDC's membership includes Alaska Native Corporations, local communities, organized labor, and industry support firms. RDC's purpose is to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

RDC submitted a letter March 3, 2011 explaining it recognized the importance of military training but is concerned that sufficient economic impact studies were not conducted prior to the release of the JPARC Modernization and Enhancement EIS. RDC urged the military to work with the Alaska Miners Association and other stakeholders (such as tourism) to develop an EIS that achieves maximum benefit for resource industries, public access, and military training needs. Overall, it does not appear these concerns were addressed.

Additionally, RDC requests mitigation measures be developed with stakeholders, to include:

- Prevention of mid-air collisions by developing a minimum altitude for military training aircraft;
- Improvement of radar and communications systems so that civilian stakeholders and military personnel operating in training areas are better informed;

N0045

- Reduce the Unmanned Vehicle Aircraft corridors to the minimum airspace needed, and mitigate use of these areas to reduce or eliminate the impact to resource development activities in the area;
- Consider making the most use of federal areas not designated for mineral resources, instead of lands with mining or other activities.

The potential economic impacts of the proposals in the EIS will likely be overly burdensome for not only large projects, but also for the “mom and pops” projects in the areas. RDC supports multiple-use of Alaska’s land, air, and resources, and advocates for increased access for resource and community development.

Thank you for the opportunity to comment on this important issue.

Sincerely,

Marleanna Hall
Projects Coordinator

RE: JPARC Comments on Draft Environmental Impact Statement

The Alaska Airports Association (AkAA) is a non-profit organization dedicated to enhancing the operation and management of airports and back country landing areas within the State of Alaska. In addition, the goals of the AkAA are to support the needs and safety of aviation. Established in 2009, membership includes municipal and state airport operation managers, pilot groups, pilots, and aviation consultants. Our organization has over 100 members through individual and corporate memberships.

The US Department of Defense has proposed a significant expansion to the Joint Pacific Alaska Range Complex (JPARC) in support of military training. This complex, already the largest military airspace complex in the country, occupies some 65,000 square miles of airspace, in addition to significant holds of land, sea and an additional 42,000 nautical square miles of airspace on the Gulf of Alaska. A series of proposals are included in the draft Environmental Impact Statement that would further expand this complex. While we support military training, it is imperative that aviation safety and access be preserved for civil users of the regional complex area and for military personnel given the importance of aviation for basic transportation, goods and services, and medical resources in the state of Alaska.

Proposed Fox3 MOAs

The proposed expansion of the Fox 3 MOA is a significant increase in lateral extent, but also in vertical dimension, lowering the floor from 5,000 ft above ground level (agl) to 500 ft agl. This expansion is in direct conflict with areas that are frequently used by general aviation pilots and air taxi/transport operators to support hunting camps, mining operations, air tour operations, access recreational areas, homesteads, support ongoing Susitna-Wantana Hydroelectric Project related activity up to and including a proposed 7,000 ft IFR runway or make other uses of this region important to the economic benefit of Alaska.

N0046

Landing areas are dispersed throughout this proposed MOA on river bars, lakes, valleys, and ridges, in communities and in undeveloped areas where new airport facilities will be needed to support future projects such as the Susitna-Wantana hydroelectric project. Due to its proximity to the largest population center in Alaska, this proposed expansion will result in an increased collision potential between high-speed military aircraft executing low level training maneuvers on MOA airspace and civilian aviation. The Draft Environmental Impact Statement did not clearly identify why this area is necessary for use or why other existing MOA's are not available. In addition, mitigations for the proposals were not clearly identified. Additional work should be completed prior to expansion or creation of new MOA's.

The Special Use Airspace Information Service (SUAIS) was created as a result of the mid-1990's expansion of the MOAs. The existing SUAIS around FAIRBANKS has been plagued with communication issues. Two of the repeater sites have been out of service for extended periods of time with one recently planned to be replaced. In a heavily used area just outside of Black Rapids, near the West Fork of the Little Delta it has been difficult to make radio contact. This is not an uncommon complaint by pilots landing and departing along the river in the area. If the existing SUAIS is poorly maintained and insufficient in numerous areas, how will expansion of the same provide for public safety? This area is extremely important for camping, mining, subsistence, hydroelectric projects, and hunting which are important to the economic benefit of Alaska.

Recommendation 1: Due to the importance of the airspace for access to the southern Alaska Range, Denali Highway and Talkeetna Mountains, and to minimize the risk of mid-air collision, especially while landing and departing airports, back country airfields, lakes, airstrips and ridges the Fox MOA, should be limited to 5,000 feet agl, and to the smallest possible lateral extent to minimize the risk of mid-air collision. In addition, real time IFR access should be provided to IFR traffic when the MOA is active.

Recommendation 2: Any expansion of MOA airspace must have accompanying radio coverage, staffing and other elements of the SUAIS infrastructure to allow civil pilots to communicate with US Air Force Range Control during times the MOAs is in use. It is also essential that the tape recorded messages, broadcast during hours when Range Control is unmanned, and be more uniformly broadcast across the JPARC complex. While the current language in the Draft EIS indicates that "funding will be pursued," given that we still do not have adequate communication in the existing airspace, it is essential that:

(a) Radio repeaters should be installed and operational before airspace is granted and in use. The repeaters should provide adequate coverage so aircraft can make contact and communicate with range control prior to entry into the special use airspace. The terrain in the proposed Fox MOA offers many different landing scenarios and communication in valleys and hillsides may be challenging.

N0046

- (b) Mitigations include raising the floor to the level where two way communication is available any time a station is down or the system is otherwise not fully operational, to allow general aviation or commercial pilots to operate without unanticipated encounters with high-speed military traffic.

Paxson MOA Low Altitude Structure

The military has proposed a Paxson MOA, which covers Isabel Pass and portions of the eastern Alaska Range. The pass is a major VFR route which links northern Alaska with south central and south east regions of the state. Along the southern flanks of the Alaska Range are mining operations, recreational cabins, airstrips, and backcountry landing areas along with lakes which experience high levels of use, which are not compatible with high speed, low level military aircraft. While the concept of VFR corridors has been discussed, the variable weather in this area is not conducive to identifying a specific single corridor which concentrates VFR traffic and increases the mid-air collision risk.

The Draft Environmental Impact Statement did not clearly identify why this area is necessary for use or why other existing MOA's are not available. In addition, mitigations for the proposals were not clearly identified. This work should be completed prior to creating the new MOA.

Recommendation 3: The proposed Paxson MOA, if considered, should be for high altitude usage only, recognizing the importance of Isabel Pass, and the air traffic routes extending from the interior south to Gulkana and beyond for civil aviation. Real time IFR access should be provided when the MOA is active.

IFR Access to MOA airspace

Considerable public investment is being made to expand airways, instrument approaches, weather reporting and remote communication outlets across Alaska; the trend is to continue modernization as funding resources become available. A corresponding private investment will be made by aircraft owners and facility owners to utilize these existing and proposed facilities. Expansion of MOAs over IFR airways precludes civil access to the airways when the MOAs are active, excepting for emergency and lifeguard flights. Experience gained over recent years with the Delta MOA's, which overlays V-444 between Fairbanks, Delta, Tok and Northway, have continued to demonstrate difficulties for lifeguard repositioning flights and other uses such as wild fire suppression logistical flights. Asking these operators to fly VFR is a potential reduction in safety and economic benefits for Alaskans. The loss of IFR access also impacts proposed projects such as the proposed 7,000 ft IFR runway to support the Susitna-Wantana Hydroelectric Project located within the boundaries of the proposed airspace and projects located outside of the boundaries of the proposed airspace.

N0046

Recommendation 4: No additional MOA airspace should be granted that interferes with IFR access until provisions are made to provide real-time IFR access through active MOAs or to an IFR instrument approach/departure associated with an airport facility. While the access may be restricted to limited flight altitudes, it is essential that civil traffic, both emergency and routine, have access to communities or facilities both inside and adjacent to MOA airspace given the critical role aviation plays in the Alaskan transportation system especially during IMC requiring IFR operations.

Proposed Battle Area Complex Restricted Area

The proposal to establish restricted airspace over the Battle Area Complex southeast of Delta Junction is of particular concern to the civil aviation community. Existing Restricted Area 2202 to the west already forces civil traffic out of the most desirable terrain route to and from Isabel Pass, a major VFR corridor connecting the northern half of the state to south central and south eastern Alaska. Winds and highly variable weather associated with the Alaska Range and the mountain pass make it impractical to confine civil traffic to a single, narrow corridor in this area. Five years ago, during an EIS process, the aviation community raised the issue about the possible need for restricted airspace, given that there were other locations available to site the military training facilities that already offered this type of airspace.

Recommendation 5: The Alaska Airports Association supports the aviation community, to oppose the addition of restricted airspace as proposed in this area, given the need to access the mountain pass, unique weather and terrain, and presence of existing restricted airspace. We suggest the military seek other alternate means to allow their training to take place, such as the controlled firing area used today, where firing is halted when a civil aircraft enters the area.

Proposed Restricted Areas for Realistic Live Ordinance Delivery (RLOD)

The proposals to establish restricted airspace for live ordinance delivery impact access between Fairbanks, Delta, the Richardson Highway corridor and the recreational and mineralized areas in the Alaska Range to the south. Further restriction of airspace limits access to these areas.

Recommendation 6: The existing Restricted Areas (2211 and 2202) already limit access between the road corridor communities in the region. The Alaska Airports Association opposes connecting the two restricted areas making an overall barrier to access in this area of the State of Alaska.

Proposed Unmanned Aerial Vehicle Corridors

There is no doubt that unmanned aerial vehicles play an important role in today's military aviation and that training is required. UAV integration into the National Airspace System is currently a topic of discussion at the national level as these airships are expanded in aviation

N0046

usage alternatives. Restricting civil airspace to accommodate UAV transits next to the second largest airport hub in the state is a concern.

Recommendation 7: Corridors that are proposed would interfere with the safe and efficient access into Fairbanks International Airport and other local airports such as Chena Marina, the Richardson Highway Corridor and the Alaska Range. Other means to separate UAV from civil aircraft, without utilizing restricted airspace, should be pursued.

Mitigation for Caribou/Sheep/Moose Season in the Alaska Range

While the Air Force already avoids scheduling of Major Force Exercises during September, December and January to avoid interference with sport and subsistence hunting, key areas under existing and proposed MOAs are heavily used for wildlife and sport fishing harvest. Military operations during these times should be avoided to ensure safety of civilian aircraft and avoid the potential for mid air collisions with low flying military operations.

Recommendation 8: Avoid the scheduling of Major Flying Exercises during the fall Moose, Sheep and Caribou hunting seasons and during times for subsistence harvests.

F-16 Relocation Proposal

While not identified in the JPARC Draft EIS, announcements in the press have communicated an Air Force plan to relocate the F-16 squadron, currently based at Eielson AFB in support of military training activities, to Joint Base Elmendorf Richardson (JBER) within the next year or so. It is also not clear what the impact of relocation of the F-16 squadron might have on airspace in and around the Susitna MOA and the corresponding civil public use facilities in Anchorage and the Matanuska Susitna Borough airports.

Recommendation 9: More analysis of this plan is required to understand the true impact on this development to allow informed public comment.

Evaluation of other Alaska MOAs

The draft EIS proposals focus on expansion of the airspaces. These MOAs and those located in other parts of the state are elements of the JPARC. The overall justification for the expansion of the FOX 3 and creation of the Paxson are for operation efficiencies however, there has been no published evaluation of the present uses of the Yukon, Stony, Naknek, Susitna and Galena MOAs to determine if they are still required to meet modern training needs or justify the expansion. No data was found in the Draft EIS on uses of these MOAs other than limited use data on the Stony MOA.

Recommendation 10: Provide an analysis of existing uses of the existing JPARC Complex including Yukon, Stony, Naknek, Susitna and Galena MOAs to establish their continued

N0046

need given the changes in training requirements, and need for operational efficiency described in the Draft EIS proposals.

The Alaska Airports Association respects the public comment process and appreciates the opportunity to provide recommendation, comments and input from airport operators and aviation professionals around the State of Alaska to support the safe and efficient use of the aviation transportation resources available.

Comments Regarding the JPARC EIS
Specifically: Expanded FOX MOA and New PAXSON MOA

The Talkeetna Community Council, Inc. has studied the proposed JPARC Enhancement and Modernization EIS and has determined that the "NO ACTION ALTERNATIVE" is the only option which provides our community with the aviation safety, recreational opportunities and economic stability we currently enjoy. Neither Alternative A nor Alternative E offer relief from both lateral and vertical expansion which have been determined to cause significant adverse effects in the areas of Socio - Economics, Air Space Management/Flight Safety, Land Use - recreational / subsistence, and Noise from the proposed FOX MOA Expansion and the New Paxson MOA.

Of particular concern to our community is the proposed high/low flight sectors and the dropping of the operations floor to 500' AGL (above ground level). This dangerous drop in flight operations coupled with the inclusion of UAV (Unmanned Aerial Vehicle) corridors, constitutes a severe risk to Talkeetna's robust commercial and general aviation. This lowering of the minimum flight training altitude to 500 feet also compromises recreational use of the area and poses negative impacts to wildlife.

Many of our concerns have been cited in the Scoping Process and are included in Vol. 1, Chapter 3.0 Affected Environment and Environmental Consequences. 3.1 FOX MOA Expansion & New PAXSON MOA. The following are areas within the scope of the proposal that we have determined to be inadequately examined:

Air Space Management and Safety - Talkeetna hosts one of the busiest small airports in the state. The area of proposed expansion is a mountainous region presenting terrain challenges and limited flight corridors through passes. The increased safety risks from the expanded special use air space and lowering of the MOA floor, will potentially result in aircraft conflicts and crashes. Pilots flying VFR, may opt to avoid the MOA causing delays, route finding and fuel issues. It is particularly troublesome to some VFR (visual flight rules) pilots to be applying "see and avoid" skills in the vicinity of UAV's. Those operators instituting IFR (instrument flight rules) will be forced to seek

***Talkeetna Community Council, Inc.
P.O. Box 608, Talkeetna AK 99676***

N0047

alternate routes. The inclusion of the Richardson Highway corridor in the MOA will be a loss to aviators using it to safely navigate area terrain. Many small operators do not have the communication capabilities to utilize SUAIS (Special Use Airspace Information Service) and other mitigation tools proposed in the EIS.

Remote Airfields- Many Talkeetna businesses depend on civil and commercial aviation: hunting guides, fishing guides, hiking and adventure guides, rafting tours, and flightseeing operators. The JPARC EIS has determined that there will be significant impacts to civil aviation using airfields in the proposed areas. On page 3-11 of the above mentioned table 3-0, a list of airfields is included with a few lodges and lakes noted- it is extremely limited. The proposed expansion encompasses an area of the Talkeetna Mountains containing numerous additional airfields and popular lakes not noted. The expanded southern and western boundary includes the Iron Creek area, all of the Talkeetna Mountain glacial headwaters, the Sheep River and many other highly used areas for hunting, subsistence and recreation. The EIS suggests that "analysis should identify small landing strips and private airfields affected by the action, particularly those providing IFR services". This analysis has not been thoroughly conducted.

In conjunction with this weak analysis, TCCI has determined that the Impact Assessment Methodology does not adequately quantify general aviation use of the proposed areas. The JPARC EIS continually cites that civil aviation use is either unavailable from the FAA or "cannot be quantified". A cursory review of operators in the area shows no attempts by the JPARC to survey area aviators or contact local flight service operators for information regarding number of annual flight plans into the Talkeetna Mountains. A full survey of commercial and general aviation users of the area should be undertaken.

Impacts to Wildlife - The proposed expansion encompasses GMU 13 and GMU 20 which are some of the most productive and heavily used in the state. None of the proposed mitigation concepts in the EIS will completely protect area wildlife from the threats posed from supersonic noise and low level flight. TCCI is adamantly against the dropping of the MOA floor to 500 feet AGL. The 1997 Record of Decision (that followed the 1995 EIS) raised the proposed minimum flight altitude to it's current 5,000' due to impacts from noise. Scattering the Nelchina Caribou herd and impacting breeding and birthing of other mammals are just some of the many potential impacts to area wildlife. These impacts will have socio-economic and subsistence impacts on our community. TCCI supports the ADF&W working closely with JPARC to manage these sensitive resources.

***Talkeetna Community Council, Inc.
P.O. Box 608, Talkeetna AK 99676***

N0047

Recreational Impacts- The Talkeetna Mountains are a popular area for hunting, fishing, hiking and rafting - for both visitors and locals. The increased military presence will detract from the wilderness experience. Night operations will be particularly unappealing to campers. The proposed southern expansion will now include the upper sections of the Talkeetna River (the longest stretch of Class IV white water in North America) which is accessed by commercial air taxi's out of Talkeetna. Not only will transportation to the headwaters of the river be potentially compromised by inclusion in the MOA, but the combination of supersonic, low level flights, noise, and mock combat maneuvers could cause the type of anxiety many campers look forward to leaving behind in their urban homes.

Socio - Economic Impacts to Talkeetna - Many visitors to Talkeetna are lured to the area by the promise of abundant wildlife, pristine wild lands, clear air, and the quiet found in remote locations. These "intrinsic values" of our area support tourism, local businesses and wilderness outfitters. The JPARC Modernization and Enhancement contradicts these values. The quality of the Talkeetna Mountain hunting/recreational experience will be greatly reduced by these proposed actions, and will in turn have negative impacts on the local economy. Impacts to wildlife numbers coupled with the overall noise and military presence in the backcountry could easily lead a hunter to alternative venues in the state. Hikers and fishermen may have difficulty getting to their desired locations on small strips within the expanded area. Local air taxi's may have to charge higher rates due to re-routing or avoidance of MOA's. Compromised safety could exclude the once productive Talkeetna Mountains from many itineraries.

Cumulative Impacts - The EIS neglects to include cumulative impacts incurred with the proposed Susitna Watana Dam. The dam site is at Watana Creek in the heart of the expansion and will require excessive use of air support for many years of potential construction. The EIS also does not include current mining operations being surveyed by MMG/Alaska Earth Sciences. These surveys also require numerous air hours and air taxi transportation of personnel. The mining survey is south of the Denali Highway and consists of ground crews as well as aerial surveys.

Supersonic flights, UAV's, live munitions, strafing, dog fighting and all that this proposal encompasses has been seen by some area residents as a denial of their rights to a peaceful lifestyle. The proposed Expansion of the FOX MOA and addition of the Paxson MOA cover an area heavily used by Alaskans and tourists. TCCI supports the NO ACTION ALTERNATIVE and encourages JPARC to seek alternative locations for training which do not present such high levels of conflict with civilians and wildlife.

JBER, AK 99506

To ALCOM Public Affairs,

The Denali Citizens Council (DCC) is a locally founded (1974), non-profit, grassroots community education and advocacy organization. We write to express concern about the proposed expansions outlined in the *JPARC Modernization and Enhancement Draft EIS*. We support the “No Action” alternatives, and have provided our concerns below. Denali Citizens Council (DCC) works to promote the natural integrity of Denali National Park and Preserve and foster responsible planning in the greater community. These expansions will affect lands within our area of concern, including several hundred square miles of land inside the Denali Borough, and airspace throughout the Borough, and over Denali National Park and Preserve. While our concerns do not end at these boundaries, our primary area of concern includes this land. Our board has heard from a number of members, and others within our communities. There have been a number of local meetings where residents have expressed concerns about the proposed training expansions. The Denali Borough Assembly passed a resolution in support of the “No Action” alternatives in 2011, and reasserted this opinion in 2012. The Middle Nenana Fish and Game Advisory Committee has done the same. Denali Citizens Council also supports the “No Action” alternatives due to the following concerns:

1. Much of the land and airspace included in the proposed expansions is used for travel by hunters and recreational users. Expanded land and airspace use, intensified use of existing areas, live ordnances, extended nighttime training hours, and lowered flight levels in these areas would greatly change their nature, and also raises safety concerns for those using the area.
 - a. The proposed expansion to the Fox MOA would relocate 1,250 overflights from the Stony MOA to the Fox MOA. We feel that dispersing use is more appropriate than concentrating use (even in a larger Fox MOA) and that the action would be inappropriate over the sensitive lands and valuable resources located below the airspace, especially considering the hazardous materials, noise, air quality, disturbance to wildlife, and human uses.
 - b. The addition of the Paxson MOA would more than double the amount of aircraft overflights across and around the Denali Highway region. As with the Fox MOA expansion, we feel that concentrating this type of aircraft use, rather than dispersing it, is too drastic to be appropriate. How did the need for an additional 11,000+ overflights arise so suddenly? Why is there a need for such a drastic expansion, rather than an incremental one?

DCC Board of Directors

page 2

2. The areas these expansions would impact contain complex environments unique not only to the United States but to the entire world, not simply uninhabited terrain available for training. DCC is concerned about impacts to sensitive ecological factors, such as habitat quality, calving areas, rutting areas, sensitive aquatic areas, and migration routes for both mammals and birds.
3. The Draft EIS states “The Air Force would encourage and facilitate the continued study of chaff alternatives (e.g., biodegradable chaff) to reduce hazardous waste-related impacts on soils, surface water, air, and biological resources within and underlying the MOAs, such that no beneficial or adverse impacts would occur (page 3-37).” Considering the massive increase of debris from chaff and flares from increased airspace use through the proposal to expand MOA areas and operating hours (combined with identified future actions), deferring hazardous waste management to a later time is inadequate.
 - a. In approving any expansion of flights in this area, the plan must come to terms with the special use designations and high standards for habitat quality that support subsistence, sport hunting and fishing, and other recreation uses.
 - b. The EIS states that: “Depending on the chaff used, plastic or nylon pieces, a felt piece, or 2- by 3-inch squares of parchment paper can fall to the ground with each released chaff bundle.” It adds that: “The existing use of flares as defensive countermeasures results in small plastic, nylon, and aluminum-coated Mylar pieces falling to the ground.” The proposed addition to the hazardous waste (and non-hazardous garbage) littered on land below would be dramatically increased by this proposal and should not be allowed.
 - c. Chaff and flare should never be allowed during regular training and should never be allowed at altitudes lower than 5,000 feet AGL (or higher) to reduce impacts to wildlife (including wildfire potential in associated habitat), subsistence and other human uses.
 - d. The “flare safe & initiation (S&I) device” is garbage that is unaccounted for as increased litter and/or hazardous waste, and should be explained in the same areas as chaff and flares are.
4. If nighttime training hours must be changed to allow for changes to Daylight Savings, this change should only be for one hour, and should accordingly be one hour earlier in the morning departures. Requesting 2 or more hours of additional nighttime training in the evening, without changing morning departure would be solely for expansion of training opportunities (not continued activities) and should not be presented under the guise of accommodating for Daylight Saving time changes. Because this EIS bases most of the need for Night Joint Training on Daylight Saving time changes, it should be revised to fully disclose that this is not the case. We do not support changes to nighttime training hours unless it is only to accommodate the Daylight Saving time changes, thus only changing to one hour later in the evening, and one hour later in the morning.
 - a. Increased night joint training will increase the overall number of flights in the airspace above sensitive habitats, soundscapes and critical lands outlined above. For reasons stated elsewhere, this is not acceptable.
 - b. No increased night joint training should occur over or near areas of heavy recreational and subsistence use (such as the Denali Highway), near noise sensitive areas, or near sensitive wildlife habitat such as calving or wintering grounds.

5. Many documented noise sensitive areas are located nearby and within existing and proposed MOAs. The Susitna MOA overlaps with Denali National Park and Preserve. DCC is concerned about the impacts increased Night Joint Training could have on the soundscapes in and adjacent to these noise sensitive areas, as well as the potential noise impacts to residents and others using the area.
 - a. Noise pollution over Denali National Park and Preserve and other noise sensitive areas must be maintained at current levels or reduced altogether. Additional noise pollution over noise sensitive areas should not be expanded. Stating that impacts will be “minimized” is inadequate.
 - b. The National Park Service has established standards for amount of noise disturbance consistent with park values in all areas of Denali, and we recommend you consult with NPS regarding the impact of the training expansion on these standards, and comply with their existing policies and standards.
 - c. The Draft EIS dismisses drastic increases to noise pollution as an “annoyance” to human users. Subsistence users and other consumptive and nonconsumptive wildlife users will be more than “annoyed” when wildlife is affected by noise, even if temporarily. Still, while “annoyed” may sometimes be an adequate description, the impacts would usually be much greater considering the increased intensity and abundance of overflights. This impact to humans and wildlife is exacerbated along with the increased noise from sonic booms and other maneuvering, as well as the scare factor (not necessarily quantifiable, but worth considering) of a low-altitude training or dry target maneuvers. These impacts should be given more weight in the consideration of cumulative impacts, and because of the impacts to these areas, training should not occur above or near areas of heavy recreational and subsistence use (such as the Denali Highway), near noise sensitive areas, or near sensitive wildlife habitat such as calving or wintering grounds.
 - d. All training (including, but not limited to supersonic training) should be done in higher altitude over areas of heavy recreational and subsistence use (such as the Denali Highway), near noise sensitive areas, or near sensitive wildlife habitat.
6. What ground uses or closures would be implemented for dry target runs? The EIS claims there would be no changes to land use, yet refers to the use of “nonfunctional threat vehicles and trailers beneath MOA airspace approved by the Alaska Department of Transportation.” Are these dry targets located then along the Denali Highway? If they are located along the road they present additional safety and other human impacts and should not be increased or added to military training. No dry target should be located near areas of heavy recreational and subsistence use (such as the Denali Highway), near noise sensitive areas, or near sensitive wildlife habitat such as calving or wintering grounds.
7. We believe that Table 3.9 only accounts for currently emitted air pollutants, and not permitted air pollutants. Permitted air pollutants (for example, the Healy Unit 2, currently not operating but predicted to in the near future) would cause a substantial increase in actual emissions. According the Alaska Regional Haze State Implementation Plan (regarding Healy Unit 2), “If brought on line, the point source NO_x emitted within the Denali Borough would increase by a factor of 4.0 and the Sox would increase by a factor of 2.8 (based on permitted not actual emissions). This increase would make the Denali Borough the largest sources of anthropogenic emissions and the second largest source of all emissions impacting the Denali monitors.” Aside from this, the fact that the Denali Borough currently has lower

RE: Environmental Impact Statement (EIS) for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex (JPARC) in Alaska (JPARC Modernization and Enhancement Draft EIS)

Dear Sir,

The Greater Fairbanks Chamber of Commerce would like to take this opportunity to comment on the referenced Draft JPARC EIS.

The Fairbanks Chamber supports the United States Air Force and the United States Army and its missions in Alaska and welcomes the expansion of the JPARC to accommodate modern and future training needs. We support the increased use of the JPARC and its planned expansion as this action is beneficial to the training of our military and the defense of our Nation, with no unmanageable negative impacts on our community under the current force structure at Eielson Air Force Base and Fort Wainwright.

The JPARC military training ranges and facilities, as a whole, far surpass in quality and quantity those found in other U.S. locations. The sheer size of the ranges:

- allows for the use of live ammunition from all Army, Air Force, and Navy platforms and weapons systems;
- allows for the Air Force to fly at combat speeds well over Mach 1;
- allows for joint exercises between the Army, Air Force, Marines, Navy, Coast Guard and our Allies in weather conditions ranging from sub-zero arctic temperatures to hot humid summer days; and
- results in the finest training opportunities for soldiers, sailors, and airmen within the United States.

A recent proposal by the Air Force to move the F-16 Aggressor squadron from Eielson Air Force Base (Eielson) to Joint Base Elmendorf-Richardson (JBER) could change the dynamic of the JPARC and affect our support for JPARC use and expansion.

The Fairbanks Chamber encourages the military to consider expansion of their missions and manning within Interior Alaska, and in return we will consider supporting associated reasonable requests to increase Alaska land and air space usage that accommodates this increased military activity. However, we will reconsider our position of support if the military proposes actions that may lead to a reduction of missions and manning in Interior Alaska

Mission: The Greater Fairbanks Chamber of Commerce represents our members by advocating for a healthy economic environment and by building partnerships that promote the greater Fairbanks area as an attractive place for business and community.

Re: JPARC Modernization and Enhancement DEIS

Gentlemen:

Copper Country Alliance is a non-profit conservation organization serving the Copper River Basin and Wrangell Mountains area of Alaska. Most of our members live in the Copper Basin; the others are very familiar with the region. Many of our members have been disturbed, and even terrified, by low-flying Air Force jets, often creating sonic booms, in the Copper Basin and the adjoining Denali Highway region. They have been perplexed by the Air Force's lack of corrective action in the face of complaints that these aircraft were straying outside of the existing Fox 3, that they were below 5000 AGL, and that they were flying at supersonic speeds below 10,000 AGL, all in seeming violation of Fox 3 requirements. Finally, only last month, we learned of the existence of a Military Training Route (MTR #937) that crosses Fox 3 and goes beyond it, to cross the Gulkana Wild and Scenic River and the Richardson Highway, and that has a branch near Lake Louise and Nelchina.

The existence of these MTRs is difficult to discover in the *JPARC Modernization and Enhancement DEIS*. They are not listed in the Index. They are not described with reference to geographic features, such as Maclaren River; they have only numbers. Almost all maps omit them. (One would expect them to be shown on Figure 1-1, "Joint Pacific Alaska Range Complex Assets and Region of Influence," or Figure 1-4, "JPARC Master Plan Objectives," and a number of other maps.) I finally found them on Figure 4-1, which is 691 pages into the Volume I PDF, and on Figure D-2, page 365 of the Volume II PDF. Because their titles give no hint about MTRs, and because figures do not come up when using the Search function, it is easy to miss these maps in such long documents.

Likewise, their significance is almost indiscernible. Only if one happens upon Table D-4 (PDF page 368 of Volume II), does one discover that jets in MTRs can fly as low as 100 feet Above Ground Level. I still have not found within the DEIS the fact that jets may travel up to sonic speeds within MTRs, but such is the case, according to another Air Force document.¹

¹ "All routes would be capable of flight operations at up to sonic speeds, low altitude (as low as 100 feet above ground level [AGL], daylight or darkness, and in all weather conditions," per *Finding of No Significant Impact for Improvements to Military Training Routes in Alaska*, June 2006. The date of the Final EA to which the FONSI relates is repeatedly cited as 2007 instead of the correct 2006. This adds to the difficulty of learning about MTRs.

N0050

Finally, the DEIS fails to adequately consider MTRs with regard to cumulative impacts. In the cumulative impacts section, MTRs merely appear on a map (Figure 4-1) and on a table (Table 4.5), and an MTR document is listed on a table (Table 4.5). The document, cited as “*Modification of Military Training Routes (MTRs) Draft EA June 2005*,” is described thus on the table:

The Air Force is proposing to modify existing MTRs within the state of Alaska to better connect the MTRs with existing SUA. These changed MTRs would be used by aircraft with low level navigation missions. MFE training in the proposed Delta MOA includes low-level flight in the Birch and Buffalo MOAs.²

Cumulative impacts are crucial components of Environmental Impact Statements. The Environmental Protection Agency³ states:

The combined, incremental effects of human activity, referred to as cumulative impacts, pose a serious threat to the environment. While they may be insignificant by themselves, cumulative impacts accumulate over time, from one or more sources, and can result in the degradation of important resources. Because federal projects cause or are affected by cumulative impacts, this type of impact must be assessed in documents prepared under the National Environmental Policy Act (NEPA).

Listing an MTR document on a table, (Table 4.5) does not constitute a meaningful assessment. The JPARC DEIS fails to discuss the interaction between the MTRs and the proposed new and expanded MOAs. And there are interactions. According to a long-time resident of Maclaren and Paxson, “The moose are on edge, our dogs in the kennel hide trembling in their houses and my three-year-old daughter is afraid to go outside when the jets are overhead; ‘Daddy, I’m scared of the jets.’” He adds, “Caribou will have a hard time; they are along the Denali mostly during the spring and summer months. Caribou are more flighty than moose. They tend to jump and run when startled; that is their defense mechanism.”⁴ The incidents referred to occurred within MTR #937, which is also within the existing Fox 3. If the Fox 3 expansion and Paxson MOA are added, that increases the area where wildlife, hunters, recreationists, and visitors are stressed by jets. If the floor is lowered to 500 AGL in the current and proposed MOAs, that greatly exacerbates the problem.

Copper Country Alliance requests that the Final JPARC DEIS give the reader a clear understanding of what jets do in MTRs, show them on maps at the beginning of the document, list them in the index, and give them the discussion they deserve in cumulative impacts. We do understand that the JPARC DEIS does not propose to change MTRs, but understanding them is essential to comprehending what is happening in the present and proposed MOAs within the region that is our home.

Sincerely,

COPPER COUNTRY ALLIANCE

Ruth McHenry, Volunteer Staff

² On the table, the timeframe for the Draft EA action is given as past and present, but not future. The Final EA is not listed on the table, even though it had been published almost six years before the JPARC DEIS was released.

³ *Consideration of Cumulative Impacts in EPA Review of NEPA Documents*, EPA 315-R-99-002/May 1999.

| I0001 | George Davidson | self | | Airspace Management, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA | The expanded Fox MOA covers my private land, private cabin & private air strip. If you are insisting on doing this expanded Fox with the lower ceiling then buy me out as I am the only private inholding in this expanded Fox MOA. I have owned this property for 30 years and your proposal will destroy the peace and quiet that I spent considerable money on to acquire. The new airspace also deprives me of my ability to easily access my private property as my access would only be feasible during periods when the MOA was not active. My earlier comments (last time your requested comments) provided you with the Lat & Lon for my property. More generally I am on the Oshetna River about 1 mile down stream from the confluence of the Little Oshetna River. This put me squarely into the active (long axis) of Fox & Paxson MOA. Please provide me with some form of contact so that I know my comments have at least been read by someone involved with this project. Thanks! George Davidson An Alaskan |

| I0003 | Shawn Roberts | | | All proposed actions | <p>38 1.5.1.6 Unmanned Aerial Vehicle Access A 12 1.5.1.1 Fox 3 Military Operations Area Expansion: As a pilot who utilizes a lot of area around Fairbanks I worry about more restrictions and larger control of existing airspace by the military. I have seen jets flying vertically through a hole in a large cloud near the Parks Highway south of Clear. I was not in an MOA at the time and wondered if he ever saw me and could avoid me if he did. I feel larger areas would just provide more of these excursions outside for GA. 32 1.5.1.12 Missile Live-Fire for AIM-9 and AIM-120 This concerns me due to the possibility of contamination to wildlife and water-shed in the area. What toxins would be left to leach out after large amounts of live ordnance in a concentrated area? 39 1.5.1.13 Low-Altitude Tactical Navigation Training: Having seen what low altitude jets have done in the wilderness I object to prolonged low altitude flights over wilderness. I have witnessed a birds nest blown out of a tree along with a large percussion to my chest with low flight and sonic booms. I believe pilots in the air over wilderness don't realize there is 'something down there' by the way they fly over it. They act as if the terrain is theirs to 'play with'. I have witnessed glass in my cabin break and saw a helmeted pilot zoom past with frost on the nose of his jet while low-flying along the Nowitna River. I do not see noisy low-flight in any way compatible with human or wild-life in Alaska's wilderness areas. Thank you..</p> |

|--------------|--------------|-------|--------------|--|---|
| 10006 | Mike McQueen | | | General (to the EIS), Noise, Biological Resources, Land Use, Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>I realize that training is the key to having an effective military and I support training, training, training! However, some of the proposals for the expanded Fox 3 MOA and the new Paxon MOA will undoubtedly impact my use of the state and public lands in these areas. My wife and I fish, float, camp, hike and x-country ski in these areas each year. I am very concerned about the following areas: Gulkana River, Tangle Lakes, Delta River, Lake Louise, and Crosswind Lake. The Denali Hwy corridor is also of great concern to me. The noise of low level (500 ft AGL) jet flights will be more than startling in my estimate. If these occur at night the noise will be downright stunning. The size of the EIS (700 and some pages) combined with the detailed nature of the presentation makes comprehension of the proposed action, alternatives and impact analysis challenging. Since you stated the majority of the scoping concerns were directed at the two MOAs I suggest you present perhaps in table form a list of the actions proposed for these MOAs the pace of operations and comparisons to noise levels a normal person can relate to. What in the world does 100 or 62 db sound like? It was difficult to understand how many passes aircraft would be making over any given area and at what altitude during normal training, during MFEs major flight exercises and at night. Without some understanding of the numbers of aircraft the number of passes and the associated noise levels of each pass it is impossible to understand what the on the ground experience will be. Please describe to me what I will experience if I were standing on one of the ridges above Tangle Lakes or some other high use location during normal training, during major flight exercises and during joint night training. Please include the intensity of the noise, duration of the noise and how many repetitions may occur each hour and each day. Please relate the noise levels to something I can relate to, i.e. thunder clap, distant thunder, rifle shot, etc. It was unclear to me if 6 MFEs annually occurred for a total of 60 days or each MFE lasted for 60 days. I believe you have incorrectly dismissed the potential for the flares to start wildfires under the MOAs. Flight exercises at the Top Gun School at the Fallon Naval Airstation in Nevada have started a number of fires on BLM lands that required the initiation of suppression activities.</p> |

10006

10006

I believe that the BLM office located in Carson City Nevada has documentation of these fires. I know that the end of a flare was identified at the origin of one fire. The climate, habitat, and potential for fire may be different here in Alaska but this issue should be investigated more thoroughly. I do agree that flares released at 5K feet should not reach the ground but they did in Nevada. Alaska Department of Fish and Game currently conducts or at least sponsors aerial shooting of wolves in Game Management Unit 13 that I believe is under a large portion of the Fox 3 MOA. ADFG recently reports that these numbers have been reduced from around 500 animals to around 150 animals. The remaining wolves may be more sensitive to low level flight noise than populations of wolves that are not hunted from airplanes. I suggest the military support ADFG in studies or at least observations of wolves and other animals of interest such as caribou, moose, migratory waterfowl and other birds responses to the sounds and sights generated by low level jet flights in these MOAs. I suggest the following: 1. The military agrees to pay for all suppression activities related to fires started by military operations. 2. Avoid low level jet flights (day or night) over known high use areas such Lake Louise, Tangle Lakes, Delta River, Gulkana River. And campgrounds along the Denali Hwy. 3. Select an alternative that minimizes noise impacts on high use areas. 4. Select an alternative that excludes high use areas from the MOAs.

5 Adopt an adaptive management strategy that will reduce noise impacts on large ungulates, predators and large migratory birds if they are found to respond adversely to low level jet flights or other aspects of military operations. 6. Low level jet flights will not be conducted parallel to or directly over high use river corridors such as the Delta River, Gulkana River etc. Low level jet flights, when absolutely necessary, should cross these high use corridors at angles approaching perpendicular. This should also be applied to the Denali Hwy. Thank You,

Mike McQueen

Subject: EIS area

I have never seen a reason for the military to need the use of 1/3 of Alaska for their exercises. I have live here for more than 50 years and had interference of my hunting and fishing areas of a great deal of Alaska by military aircraft and other vehicles. There is enough area already designated for you to use and you need no more.

I0008

From: Karl Monetti [REDACTED]
Sent: Monday, April 09, 2012 1:40 AM
To: ALCOM J08 Admin Box
Subject: JPARC

I am writing to express my concerns over the proceed expansion of military fly zones.

Much of the area the expansion will cover includes settlements, lodges, subsistence areas, and recreation areas such as Paxson and Meiers Lakes, Sourdough, Maclaren, Lake Louise, and the Tangle Lakes/Delta Wild and Scenic River system, as well as most of the Denali Highway. Most people who live in rural areas do so in part to escape the stresses, including noise, of more settled areas. They forsake many conveniences—water and sewer service, supermarkets, hospitals—in order to do so. Alaska's rural and backcountry areas should provide an alternative to city and suburban life, for locals as well as visitors. Visitors (tourists) expect nothing less. Many of them spend their lives dreaming of the Alaskan adventure; having that dream shattered by low flying military aircraft all hours of the day or night, almost anywhere they choose to travel in the state, is unacceptable.

JPARC is already huge. It takes up a great swath of Alaska. We believe that our Armed Forces are fully capable of finding ways to perform their necessary training within the present 65,000 square miles. On a personal note, I live 3 miles southwest of the Eielson AFB runway, in the Eielson Farm Road. Eielson AFB owns thousands of acres of land to the northeast of the runway; why is it that the touch and go practice is always conducted over populated areas like the Eielson Farm Road instead of over the unpopulated lands the base already owns? This question has direct bearing on the proposed expansion; if current military practice does not take into consideration the peace and quiet of current residents, why should we believe any attempts to minimize noise/nuisance would occur over vastly expanded land areas in the future?

Past personal experience tells me that AGLs and sonic boom restrictions will be violated. For instance, I have had at several such experiences in the Tanana Flats Training Area. I live on the flight path between EAFB and Blair Lakes bombing range. Numerous times I have had low flying (less than 500 feet AGL) come right over my house, just barely above tree-top level. Worse than that nuisance and noise is the fact that they also fly right over my personal runway; if a plane were taking off from this runway when a violating chopper went over, disastrous consequences could arise.

Sonic booms aside, the noise and sight of jet aircraft at 500 AGL is unacceptable. The proposed extension covers thousand of square miles of prime hunting and flight-seeing lands, where dozens of light aircraft are to be found fling at similarly low levels AGL on a daily basis. Having high speed military aircraft mixing with these light aircraft is unsafe. Existing restricted areas already provide thousands of square miles of land over which aircraft can practice low level high speed flight and maneuvers.

High noise levels at night are even worse than in daylight. **Night flying time should not be extended!**

Wildlife is likely to be stressed by the low flights, with or without sonic booms.

EIS Should Include:

1. All alternatives should include monitoring and enforcement of flight levels and flight speeds. Random but frequent checks should be made of flight tapes. Look into the feasibility of beepers than warn pilots when they are below prescribed flight levels and when they are approaching Mach 1.
2. All alternatives should include more and continued publicity about the number that people should call to report sonic booms and violations of prescribed flight levels and training area boundaries. Publicity should include what types of information people should be prepared to provide. Consideration must be given to the fact that a few days may elapse before people can make the report. Some of us do not carry cell phones, and even if we did, cell phone coverage in the FOX areas is spotty.
3. It is important to understand how dozens of species of birds and mammals are affected by low level flights and sonic booms. This information is not readily available for most species, because Alaska's wildlife managers, operating on

I0008

restricted budgets, tend to concentrate their research on those species most used by humans. Anecdotal reports alone cannot be relied on; they lack rigor, and they often conflict. Research is especially important for those species with small populations and/or special vulnerability to other stressors like climate change. Examples include wolverine and pika. The military should contract with independent scientists, possibly at the University of Alaska, to undertake research.

4. What is the possibility of an avalanche being triggered by a sonic boom? The proposed Paxson MOA includes popular winter climbing, backcountry skiing, and snowmachining areas.

5. Low level flights over areas where birds are concentrated could be hazardous to both birds and airplanes. For instance, large flocks of ducks and a number of swans utilize a series of lakes around mile 48 to 50 of the Denali Highway, in the existing FOX 3 MOA. The tragic, fatal collision of a jet with geese at Elmendorf illustrates this hazard. A similar hazard would exist during migrations.

6. Household subsistence studies, now twenty years old, should be updated to give a current picture of current consumptive uses of wildlife. The National Park Service has been able to research only a few communities so far.

Thank you for your consideration.

Karl Monetti

Subject: JPARC expansion

I attended the last session JPARC had in Healy, and, because nothing much seems to have change, I won't be attending the one on May 21st. I agree with the attendee in Palmer who told you that it is an outrage that the military is taking over Alaska's playground, turning it into a war game zone, which will make it extremely inhospitable to the Alaskans who have been recreating there for many years (not to mention the native Alaskans who have been hunting there for time immemorial). Most of the military war-gamers will likely be kids from the lower 48, who have no love or care for our Alaskan land, environment, plants, and animals. This is not ethical!!!

As a long time Alaskan, 67 years of age, who has lived all over the state, I have seen the devastation caused by the military taking over Alaskan terrain (Long Island off of Kodiak town, for example). There are old, rusting, polluting oil drums all over the tundra, in many villages where I have taught, remnants of the military presence. As an avid environmentalist, I am aware of other places that the U.S. military has ruined with their war games, such as Makua in Hawaii.

I am adamantly OPPOSED to any additional military presence in Alaska! Please take your war games and weapons and polluting, expensive aircraft elsewhere. Keep them on the bases already established in the lower 48.

Sincerely, Dianne Herman, [REDACTED]

Dear Sir,

RE: JPARC

The Joint Pacific Alaska Range Complex Modernization and Enhancement of Ranges and Training Areas program has recently released an Executive Summary. I have spent 2 ½ hours trying to understand the changes that might affect me and am baffled.

Rather than the military saying "HERE IS WHAT WE ARE GOING TO DO, WATCH OUT!" They really need to identify the 24-7-365 **SAFE CORRIDOR** for General Aviation Aircraft flying from Tok to Fairbanks. I'm sure pilots in other communities would express a desire for similar **SAFE CORRIDOR** routes in their areas.

On the afternoon of 4-18-12 a rogue military 4 engine turbo-prop buzzed over Tok several times @ 4-5 hundred feet above ground level! This scared the be-jeebers out of me... Approximately one hour earlier I had returned from a General Aviation flight at that same altitude and same location. My little Super Cub wouldn't stand a chance avoiding an Orion - Hercules size 4 engine military aircraft flying at 200+ mph. The prop wash and wing tip vortices would roll me right out of the sky... provided that we missed a collision in the first place. This kind of flying is going to kill someone. Yet, with the proposed ceilings and floors of the JPARC this is exactly the kind of flying situation that is being set up.

Please take whatever steps are available to require establishment of 24-7-365 **SAFE CORRIDORS** along General Aviation routes.

REMEMBER: IT'S OUR SKY TOO!!

4 MR. KENDALL: Mr. Orr. Mr. Orr, name is Paul, middle
5 initial D, Kendall. I'm from Alaska and I came to your meeting
6 tonight to kind of wedge something in because I'm not articulate
7 and learned enough to really understand the EIS like some of the
8 professional members of my community.

9 I'm an energy activist. This is a business card I'd like
10 to give into the record and also a list of links and these links
11 represent a new energy design that is now expected to come
12 online within the next six to 18 months. Most of you know it as
13 cold fusion. What, should I just hand this to somebody or....

14 UNIDENTIFIED MALE: Yes.

15 MR. KENDALL: Oh, all right. You'll be looking at
16 something called an E cat, energy catalyzer, by Mr. Rossi and
17 they're getting what they call COP, coefficients of performance
18 or production. They're six to 30 times the energy out that they
19 put in. They're suggesting that these units can run for six
20 months under temperatures of 1,500 degrees Celsius on five grams
21 of hydrogen and about 55 grams of nickel and they produce zero
22 pollution. They can also drive a five KW electrical unit at the
23 same time. Scientists are now talking the time has come to
24 where oil pipelines, there's no need for those or power lines.
25 They're talking about energy that can be looped. When you can

[REDACTED]

I0016

48

1 loop energy it's infinite. And if that weren't enough, another
2 competitor came out with a 45 KW unit which will run for a year
3 and a half on a limited amount of hydrogen and nickel. And if
4 that weren't enough, last week a company by the name of
5 Brillovin, which you can find on pesn.com out of Berkeley,
6 proposes that they have found a frequency which separates these
7 subatomic particles and you can run a boiler in Nome, Alaska for
8 three years on a quart of water. And if you bring that same
9 boiler -- and that's with no gas lines attached to it. And if
10 you bring that same boiler to Berkley you can run it for 20
11 years.

12 And the reason I bring this to you folks tonight is that
13 we have a coal fire power plant in Healy. They're about to fire
14 that plant up on coal and I would think with your funding and
15 your leading edge technology as defenders of which there's a DIA
16 document on that list which refers to this as the greatest
17 potential transformation of the U.S. battlefield forces since
18 the change from horses to gasoline. I would suggest that you
19 intervene as quickly as you can and go into that coal fire power
20 plant with these units which produce tremendous amounts of
21 energy when hooked in sequence. And if that weren't enough, we
22 think the U.S. Navy has purchased one of these small shipping
23 containers that can generate about 15 to 30 KW in electricity.
24 Once it kicks itself off it makes its own energy.

25 And I realize some of these things sound preposterous, but

I0016

49

1 the chief scientist at NASA has weighed in on this. Stanford
2 Research Institute has validated some of the tests, Los Alamos
3 Laboratories. Some of the most renowned names around the world
4 are now coming online with this, including the Royal Society of
5 Swedish People out of Switzerland, and even they made the
6 comment that Mr. Rossi is credible. There are now six companies
7 vying to come online with a residential unit within the next six
8 to 18 months. And the Swedish scientist said they don't -- the
9 design is credible, they had a big press conference, but they
10 don't understand what it's doing, how it's doing or anybody that
11 does. This is something transformational, what we call, it's
12 almost a metamorphosis of this society. They think they will
13 move through a world production covering the market within three
14 years at the max 25 percent of the world houses with these
15 devices. They are suggesting the military and the DIA document,
16 they're referring to this as disruptive technology. They're
17 saying that this has up to 10 million times the energy per unit
18 of chemical mass of anything we're using on the planet today.

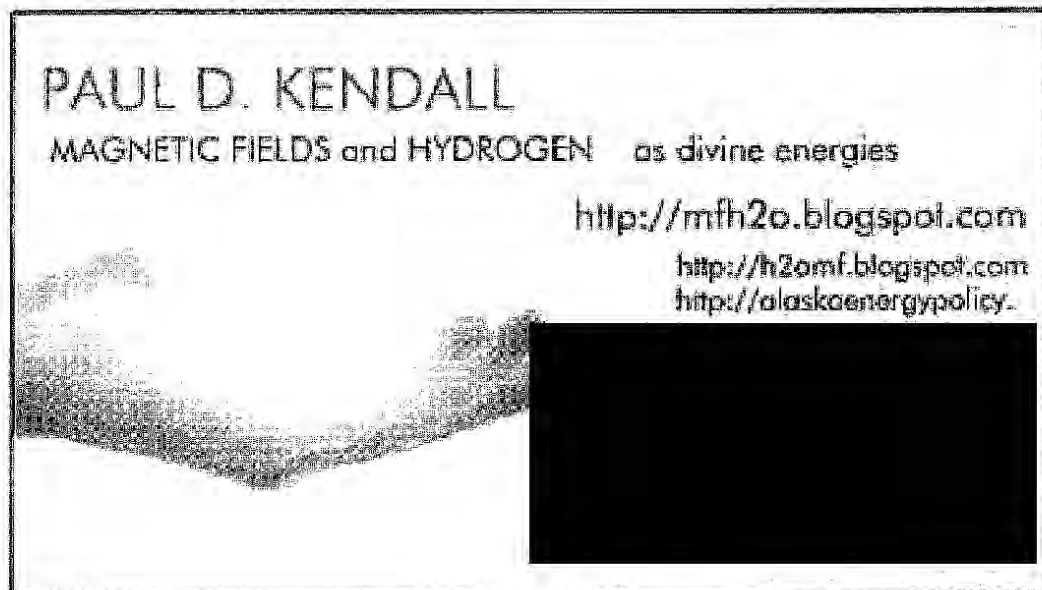

19 I have never seen anything unfolding quite like this in my
20 lifetime. I do think it has a tremendous amount of credibility,
21 but you should see the scientists arguing. You have a chance
22 here with your military operation to be a part of our community
23 to help build that new society almost overnight in a great and
24 wondrous land with many challenges and I think it could play a
25 historical role. And you can't -- surely can't let the Navy get

2 And thank you very much.

8 MR. KENDALL: Well, I'm not sure when I've had the
9 opportunity to do this before in my lifetime. I've been in lots
10 of places here, but I am going to seize the opportunity.

11 I think that you need to understand something, ladies and
12 gentlemen, and this is why this is very important. Our society
13 is founded on energy. And in regards to this EIS I have to tie
14 this into here if you'll give me a moment to construct this, but
15 even though the EIS looks to find harmony and your society is
16 chasing money, but there isn't a creature in the universe that
17 eats the money. It's all an after energy moment and I think
18 that it is imperative that you add the energy consideration in
19 this EIS. And when you look at the constructs of that energy
20 you will find that most of it, if not all of it, is hydrogen
21 based.

22 So I'm trying to wedge something in here as best I can in
23 your EIS. It would seem to me the fact that you don't have this
24 included in your EIS is a profound statement about the lack of
25 connection in a properly formed society. And to make an example

[REDACTED]

I0017

51

1 of that so that you understand the relevance of that, your
2 children do not drink a glass of water. That is an ancient
3 term, it is a primordial term, it is a tricked up term or a
4 sling term. You drink hydrogen and oxygen and when you drink
5 that your body makes electricity, it fires you up. You come
6 online, onboard with synaptic impulses and then you hunt carbon
7 to form frame and hair and infrastructure. And when you begin
8 to realize that you begin to realize the connection. There's no
9 such thing as gasoline. It's hydrogen, pop and carbon. There's
10 no such thing as diesel. It's hydrogen, pop and carbon.
11 There's no such thing as jet fuel. It's hydrogen, pop and
12 carbon. Every creature out there in the universe, ladies and
13 gentlemen, is a transportation system that is specialized in
14 this design. All of those designs are fired by hydrogen living
15 in harmony with its hydrogen. And for you to have an EIS
16 without a hydrogen reference point to the impact of all those
17 things. Anything that's consuming hydrogen, generating a
18 current and altering its mass most likely has a state of being
19 of which we have not recognized in our evolution yet. But when
20 this new cold fusion comes online you're going to find whole new
21 economies and the reason you will is they will not be able to
22 use fuel to be able to give foundation to the dollar. And if
23 you have energy you can tool up, tech up, light up, arm up,
24 transport, communicate, grow food, you are a creature with a new
25 mindset and a new set of priorities and that will evolve your

I0017

52

1 society. And to see an EIS in a magnitude of outlay of this in
2 such a credible body of -- there are so few credible bodies of
3 commentary anymore that are not talking and dodging points that
4 to see such a credible body as our military of which we have
5 conveyed the greatest hope and trust in not have an EIS
6 reference I think is -- needs to be addressed as a concern in
7 your next EIS.

8 And I think without getting -- doing some kind of sideshow
9 up here I should probably sit down and thank you for the
10 opportunity. I just can't stress enough that our societies are
11 going to be based upon energy and as complex and as cascading as
12 the problems are nest -- now that have become nested problems
13 with the proper amount of energy you can hold your family secure
14 while we take five to 10 years to settle these problems out.
15 You cannot do that with money, ladies and gentlemen. You cannot
16 eat the gold, you cannot eat the silver, you cannot eat the
17 money. Those are false constructs of pursuits which disconnect
18 you from understanding that all around you it is the wonders of
19 the universe which was our mission and we lost that mission.
20 And you are about to see that transform almost overnight if
21 these units come online in the next 18 months. And I assure you
22 there's more, but I can't get into the realm of that because of
23 the time constraints and -- but I -- but due to the -- your
24 accommodating me with your -- due to your generous
25 accommodation, I mean I'm beginning to feel particularly

I0017

53

1 embarrassed here so I'll sit down.

2 But please, I think that it's imperative that you address
3 our more concrete values and those fundamental values are
4 individual freewill and complete and undeniable truth and if you
5 miss those along with the energy you will continue to have us in
6 a society that simply circles itself in some predatory mode of
7 disruption and lack of evolution. And so I think as a military
8 and a large body, a credible body, I am as obligated to bitch at
9 you as you are to lis -- to complain as you are to listen to me
10 in some ways and if I don't exercise that right then I'm as
11 guilty as those people who simply become disconnected and
12 suddenly push back in some malcontented position which harms
13 somebody. So.....

14 COLONEL ORR: Okay.

15 MR. KENDALL:I'll stop. Thank you very much.

I0018

Comment(s):

① Fox 3 MOA Expansion: I support no action alternative. Our recreational cabin would be encompassed (or nearly) by the proposed expansion (Alternatives A and E). We already hear military training (some booms). We do not want to hear them any closer or louder. We go out there for peace and quiet and spend a lot of time there. Expansion would negatively impact our quality of life.

② Night Joint Training: I support no action alternative ^{to minimize} ~~the~~ The noise impacts on wildlife.

All other proposals: my comments are not specific to Alternatives as I don't have time to study them, but I do have concern about air and ground impacts on the biological resources, air quality and water resources involved.

Use additional sheets as needed.

Please turn in this form at a public hearing or submit by June 7, 2012, to:

19 MR. WOOD: Thank you again. Mike Wood, W-O-O-D.
20 Initially I asked the question about restricted areas that were
21 proposed just south of Delta and to the east of the highway.
22 Proposal A leaves a fairly wide corridor for VFR traffic going
23 north and south. It's the main route, we all know that, we've
24 (indiscernible) that area. Proposal B butts right up against
25 the highway, comes right close to the pipeline and it follows

[REDACTED]

I0020

4

1 VFR traffic into an extremely small corridor that goes north or
2 south. If you've ever been in that area you more than know that
3 a lot of aircraft do not have radios. They go through there in
4 marginal weather and to put everyone in that small little
5 corridor is basically giving a high risk for the possibility of
6 a midair. I would like to see proposal B give an extra buffer
7 to take it further to the east of approximately maybe one
8 kilometer or even two kilometers. This way people who do follow
9 highways, and a lot do, will be able to know that they're well
10 clear of any restricted area.

11 As far as flying the pipeline, it is clear for us, however
12 I would still like to see it either 2202 (indiscernible),
13 proposed east restricted areas (indiscernible) so at least you
14 could go either to the west and stay away from the east
15 restricted area or vice versa.

16 As far as the MOA is concerned at Paxon, this area is not
17 supposed to be active as a MOA except under certain
18 circumstances. However, I believe 500 AGL for the base of it
19 when it is active is far, far too low. Many aircraft transit in
20 that area between Glenallen, Black Rapids, through the Alaska
21 Range or in through Tok and giving us only 500 feet when it is
22 active for all of us is just not enough. I would like to see a
23 base of 2,000 feet, but I would accept 1,000. And we must have
24 some form of radio communication such as there is to the north
25 where we can call up radar on -- on range rather on 125-3. They

I0021

5

[REDACTED]

11 COLONEL ORR: Our next speaker is Mr. William, I think he
12 goes by Bill, Folsom. Is he here?

13 MR. FOLSOM: Bill Folsom. I have several reasons that I
14 don't think that any of the MOAs in this corridor of the rail
15 belt should be activated, only on the military bases. There's
16 way too many reasons. We have a large population in the rail
17 belt now and there's a lot of hunting activity and fishing
18 activity and camping activity and what have you that goes on
19 that be accessed by the largest population area. You know,
20 hunting season from August 15th to October 15th would probably
21 be the outside parameters.

22 You currently have an MOA for a 5,000 foot fly zone in
23 part of the area that you're proposing. I've had friends that
24 have had some of the pilots come, they're not sure, 100 feet
25 above the top of them. And they don't see them, they hear them.

[REDACTED]

I0021

6

1 I mean it's just kind of a shock when they go over. And so if
2 they are -- if they're breaking the 5,000 feet down to 100 foot
3 or whatever, the 500 feet is going to be put aside I'm sure.

4 Fish and Game I'm sure has all kinds of activities that
5 they would like to do in this area. When they are taking
6 surveys and their windows for taking surveys on game are very
7 narrow and to have them disrupted because of activity. I wrote
8 some of these down. You know, six events for 10 days each or 60
9 a year and then there was the Army would have 242 days if I
10 heard that right. And then there's 14 days per battalion. I
11 don't know how many battalions there are. So I'm not even sure
12 of the -- whether there's a weekend open in this thing. But I
13 think the whole operation except for your bases, if you want to
14 have a fly zone to do these things should be moved east now. I
15 was thinking west before, but east to the Wrangell St. Elias.
16 That's federal land and we can't go in there without a note from
17 God. So that would be a good place for you to take that
18 operation I think.

19 So I think that's about all I have. I just don't think
20 that it's advisable to put this right in the populated areas
21 accessible by the largest group of people in the rail belt. I
22 am the local chair of the Fish and Game Advisory for the Mat
23 Valley, however, and I think most of them will agree with
24 everything I've said, but we're going to get some consensus as a
25 group and put in some comments later. So I guess that's all I

I0021

7

1 had to say. Thanks.

[REDACTED]

[REDACTED]

I0022

7

■ [REDACTED] [REDACTED]

2 COLONEL ORR: Thank you. Our next speaker is Mr. Jim
3 Stocker. Is he here?

4 MR. STOCKER: Thank you, Colonel. For the record, my name
5 is Jim Stocker. And before I start my testimony or my comment
6 period I want to make something really clear to all the military
7 personnel here. Anything that I say please don't take it
8 personally. I have a high degree for all of you and for the
9 military itself and I know that this didn't come out of your
10 think tank. This probably came out of Washington somewhere,
11 somebody sitting at a desk that doesn't live here, doesn't
12 really understand the area, doesn't understand the issues.

13 But with that said, I've been here for 40 years. I've
14 been a pilot for 40 years. I have extensive time flying in this
15 proposed MOA or Military Operation Area 3 up in the Talkeetna
16 mountains, game management units 13 and 14. And when I first
17 heard about this, and I'll be up front about this, I don't know
18 a lot about it and I should know more about it. When you take
19 into consideration that the largest population of Alaska sits
20 right here in the Mat Su Valley in Anchorage and the playground
21 for the -- the epicenter of Alaska is the Kenai Peninsula and
22 the Talkeetna mountains. It's accessible -- let's talk about
23 the Talkeetna mountains, MOA 3 area and that little area that's
24 to the east of it there, that magenta area. It's accessible by
25 airplane, it's accessible by foot, it's accessible by boat, it's

[REDACTED]

I0022

8

1 accessible for four-wheelers and by vehicles. That's the
2 playground for Alaskans right there and for somebody in
3 Washington to come down and want to put a military operation
4 right over the top of it is absolutely ludicrous. I cannot
5 believe that somebody would be so arrogant to do that. There's
6 areas in the state that would do just as fine as that area right
7 there. And Bill Folsom, you stole some of my thunder. The
8 Wrangell St. Elias National Park, I've been in it. There's
9 nobody there. It's empty. The Wrangell St. Elias gate to the
10 arctic, you've got the parks out to the west, the Lake Clark
11 Park, you have Mt. McKinley Park. You have all these federal
12 areas. This is a state -- mostly state property. Why don't you
13 think about taking those areas out to a federal park or taking
14 it out of this area. It doesn't belong here, this is wrong.
15 This is just totally wrong.

16 And I don't mean to be so outspoken, but I've been here
17 for a long time. I've been a guide. I know what goes on here.
18 I know how many caribou permits are given out, how many moose
19 are taken. I've been on the Board. I used to be the Fish and
20 Game advisory chairman here at one time and I've worked with
21 Fish and Game, I've worked with the biologists, I've worked and
22 done counts. This area right here is a very sacred area for
23 people that live in Alaska and, like I said, this is the
24 epicenter right here as far as hunting and fishing. Sure,
25 Alaska's big, but as we all know, if you want to hunt in the

I0022

9

1 Brooks Range or you want to hunt out west or you want to hunt
2 down on the Alaska Peninsula it's a logistical nightmare, it
3 costs a fortune and it's not practical for a lot of people.
4 This area here should be left to Alaska, it should be left to
5 Alaskans. And again, nothing against the military, but this is
6 wrong and I would like to have the group of people here that
7 proposed this, you know, the people that really came up with
8 this idea in the first place because I'd really like to talk to
9 them,

10 But anyway, with that said, this is wrong and I don't
11 think it should be here. I think it should be moved and I think
12 this whole idea, this whole area of the military operation, MOA,
13 I see it on my flight map all the time, in this case three, Fox
14 3, and that other area should be changed and I think there
15 should be a great deal of consideration given to that. Thank
16 you.

I0023

9

[REDACTED]

17 COLONEL ORR: Thank you. The next speaker is Mr. Rod
18 Arno.

19 MR. ARNO: Thank you for the opportunity to testify. My
20 name is Rod Arno, A-R-N-O. I'm the Executive Director of the
21 Alaska Outdoor Council which is a group of over 10,000 Alaskan
22 outdoors folks.

23 The Outdoor Council has looked over this plan and been
24 part of the process since the beginning. Our concerns remain
25 the same. It's been well pointed out that GMU-13 is one of the

[REDACTED]

I0023

10

1 close accessible state land. The State only has about 24
2 percent of the land and this state is managed by the State.
3 Sixty-four percent of it is federal and 12 is private ANCSA
4 land. So this is extremely important to our membership for
5 hunting, fishing, trapping and recreational use of the Nelchina
6 basin.

7 The 500 foot lower level, you know, that's just totally
8 not going to work out just because of the way the Alaskans use
9 the aircraft for access up here. You know, what happens up in
10 GMU-20, which is another really important part of game
11 management and state land, well, you know, the military lands
12 there, you're -- you know, obviously you can do what you want on
13 those. But on this one little piece of state land here it's
14 extremely important for Alaskans to be able to access that.

15 Another point I'd like to make is in the last couple
16 decades I've participated in a number of EISs that the federal
17 government's put up, BLM, their resource management plans and
18 comprehensive conservation plans for refuges and I hope the same
19 standards are used by the military on their EIS as the standards
20 that are put on the Alaskans when we try to participate and
21 actively be on federal lands. Thank you.

7 [REDACTED]

8 COLONEL ORR: Thank you. The next speaker is Mr. Peter
9 Probasco.

10 MR. PROBASCO: Yeah, I'm Peter M. Probasco and I have a
11 couple comments. The first one is about communications and I
12 have the draft copy of this plan and it is a very, very
13 difficult study I think from the perspective of many of us that
14 are civilians. I got out of the Air Force in 1960 and I was
15 never that familiar with that many acronyms then. But there are
16 five pages of acronyms that go with this draft copy and if you
17 start studying it, I took them out so I could refer to them all
18 the time, but it's very, very confusing. And I think when you
19 want to communicate something you need to do it with some
20 clarity and recognition to the audience you're trying to
21 communicate with and I thought that was very confusing. I think
22 there is more clarity with this meeting than the one we had last
23 fall in Wasilla at the Menard Center.

24 Another thing, the comments that the individuals have made
25 about this being the playground center and the aspects of this

[REDACTED]

I0025

12

1 and the amount of it that's state land I think is very, very
2 significant. And I think state land is different from federal
3 land and is different from park land. Park land is federal
4 land. And I agree totally that there should be park land that's
5 part of this. Some of the park land is never even looked at by
6 anybody and it's not going to have any impact as far as
7 populations or probably not going to have any great impact on
8 our wildlife populations. But state land are -- have to be
9 managed supposedly in compliance with the Alaska Constitution
10 and so you need to take into consideration sovereignty of the
11 state.

12 And I think coordination was mentioned in one of the
13 presentations about coordination with FAA and a couple of other
14 entities. I think a coordination group should be actively
15 involved should be the department of Alaska Fish and Game
16 because game populations are very dynamic and the things that
17 game populations do is dynamic and what could be reasonably
18 acceptable one year may not be totally out of line the next year
19 because of changes in population, migrations, route and
20 everything else.

21 So I think all of these things -- I think it'd be very
22 important if there were clear statements in there that this has
23 been evaluated and assessments made by the Alaska Department of
24 Fish and Game.

25 Another concern, and coordination was a big one, but you

I0025

13

1 talked about biological refer -- or biological resources and the
2 evaluation indicated in a couple cases that this was not
3 significant, the impact on the biological resource. I think
4 that if you evaluate a biological resource, be it caribou or
5 what, during calving season, during any stage of pregnancy, any
6 kind of impact, it's very significant. I know in domestic
7 animals it's not difficult to cause a whole flock of sheep to
8 abort by stress and I'm sure that the same thing can happen in
9 caribou and I'm sure with dall sheep. I don't know about moose,
10 whether they're prone to that sort of thing, but I think if you
11 harass them enough they do abort too.

12 So these are significant considerations that need to be
13 made and I think there needs -- you'd communicate much better if
14 there were references made in the publication that there were
15 assessments made by the Alaska Department of Fish and Game,
16 coordination with other entities within the state clearly
17 stated. The fact that you went to studies is very, very good,
18 but where these studies came from, who made them and when is
19 very, very important. Thank you.

20 COLONEL ORR: Thank you. Our next speaker is Mr. Bob
21 Dittrick.

22 MR. DITTRICK: Thank you for letting me go on record. I'm
23 Bob Dittrick, D-I-T-T-R-I-C-K again.

24 COLONEL ORR: Okay.

25 MR. DITTRICK: And I was -- with my question earlier about

[REDACTED]

I0027

14

[REDACTED]

24 MR. KREGER: My name is Frank Kreger, K-R-E-G-E-R, and
25 today I live in Wasilla. I don't have anything new to say.

[REDACTED]

I0029

15

[REDACTED]

17 MS. MATTHEWS: My name is Beverly Matthews and I live at
18 Lake Louise and we have about 200 -- over 250 cabins up there.
19 Now in the summertime lots of people fly and they -- I don't
20 know that they fly 500 feet, but they're coming back and forth
21 to their cabins and this just isn't going to work. That's why
22 they like having property on the lake. It's a beautiful place
23 and we just got to get the military up higher.

[REDACTED]

[REDACTED]

I0030

15

[REDACTED]

25 MS. KREGER: My name is Ann Kreger, K-R-E-G-E-R, and I

[REDACTED]

I0031

16

[REDACTED]

16 MR. STOCKER: Thank you, Colonel. Once again, for the
17 record, my name is Jim Stocker. There's something that I
18 omitted that I wanted to bring up. And it was a few months ago,
19 I don't know, five or six months ago the Air Force lost a jet up
20 in the Talkeetna mountains. Correct? As a pilot it shut me
21 down. You guys -- and again, nothing personal, but you put a
22 big corridor around that area, blocked everything off, and if
23 that's just one example of what might happen when there's, you
24 know, training exercises on the ground or other exercises or if
25 you have an accident and accidents happen. And I don't have any

[REDACTED]

I0031

17

1 problem with that. Accidents happen, we burn fuel. That's one
2 of my concerns. When that happened it really kind of threw my
3 plans into a tailspin and I don't want to be worrying all the
4 time if I'm flying in the wrong airspace or if I'm going to have
5 some jet come up and escort me down or I'm going to get turned
6 into the FAA and have a hassle with them. I don't need that.
7 You know, I'm 60 years old, I don't need anymore hassles. It's
8 a nice simple place to go. The rules right now are pretty
9 simple, you know, mostly class E airspace, everything's fine.

10 Another comment I wanted to make, as far as the fuel's
11 concerned, I can tell some of you military folks in the back
12 exactly how much fuel was used in Iraq per day. It was a lot
13 and I don't have a problem with that. If you need to use it,
14 use it, burn it up. But for us to say that -- or for you guys
15 to say, or the people that are, you know, proposing this, to say
16 that we're going to have to save some fuel, that doesn't work,
17 that doesn't work for me at all. You know, we move militaries
18 to Iraq, to Afghanistan. If we have to do it we do it, fuel's
19 not an issue, and I don't think it should be an issue here. The
20 issue here is the people in Alaska. In another state this
21 wouldn't happen, you wouldn't get away with it, not even maybe.

22 But with that said -- and I could stand here for hours and
23 hours and I appreciate the second opportunity to give a few
24 comments. I just basically wanted to state what happened here a
25 few months ago with shut down airspace, big inconvenience to

I0031

18

1 what we were actually doing at the time. Anyway, thank you.

[REDACTED]

[REDACTED]

I0033

19

1 concerns, but then you continue to do exactly what you intend to
2 do with maybe a few little modifications. It does not belong in
3 the rail belt other than your bases. It just is not going to
4 work.

5 Now you have a small representation of people here, but as
6 soon as all this hits the fan and it actually starts happening
7 then people are going to come out of the woodwork and I mean
8 there'll be hundreds and hundreds of people that are going to be
9 upset. And so I hope that the whole thing is reversed except
10 for whatever you do on your existing bases and get all the MOAs
11 out of this rail belt area, these other expansions.

12 THE REPORTER: Sir, could you please state your name for
13 the record again?

14 MR. FOLSOM: Oh, yeah, Bill Folsom.

1 acronyms that really don't -- even JPARC really doesn't mean
2 anything to me until I was alerted to the issue and did some of
3 my own research. And so I think people will be blindsided and I
4 think what we can do is to spread the word in our community that
5 people should be educated about this proposal, but it feels like
6 time is of the essence. We have less than a month to comment.
7 So I would encourage all of us here to tell everyone you know at
8 least about this and let them form their own opinion, but at
9 least make it more widely known what this obscure acronym means.
10 And there are great materials here and it seems like there is a
11 lot of information online, but I would say clearly by the
12 numbers here it is not very well known to the general public
13 that will be impacted by JPARC. Thank you.

18 MR. PROBASCO: Peter M. Probasco. And as to the question
19 you stated and that's a very good question, as to what we can
20 do. Don Young spoke at the Palmer Chamber here a month or so
21 ago and one of the questions came up to him, the commentary made
22 about the amount of land up here that's controlled by the
23 federal people and the amount of land in parks. And of course
24 everybody thinks park land is totally sacred, they're not tread
25 or anything else, but there is a lot of park land that isn't

[REDACTED]

I0035

21

1 even looked at. And this was brought up to Don and he thought
2 that was one thing that possibly that there could be some
3 changes made is to recognize that there is a lot of land
4 available there not being utilized that isn't going to hurt
5 people if we do use it.

6 One of the comments was made that this area up here, Unit
7 13, is the breadbasket of Alaska. Don did come back and very
8 rightfully so say that to much of Alaska military payrolls are a
9 breadbasket also. So we do need to be very conscious of the
10 role that military plays in our economy. But that park land up
11 there that's available to get away from using state land, there
12 is no reason why they can't do many of these things over. It's
13 not going to hurt it at all and it's not even going to hurt our
14 game populations because none of those probably migrate into
15 areas where we can utilize them as prescribed by the Alaska
16 Constitution. So I think that's -- Don was sensitive to that
17 and maybe there is an outlet to do something.

| 10036 | Joe Gerwig | | | General (to the EIS), Airspace Management, Safety (Airspace), Safety (Ground), Physical Resources, Land Use, Infrastructure and Transportation, Subsistence, All proposed actions, 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | I have grown up in the Chickaloon area and realize how much recreation goes on in the area, and how important it is, in the air and on the ground. I also realize that we have a safe country because of what our military does. I don't want our military to have insufficient training, but I want recreation and economic bases to continue. I don't think that the military realizes how much recreation and revenue there is in the areas behind Eureka and Lake Louise. The idea of the Fox 3 MOA expansion is that the general public could still use it hot or cold for VFR, but you are asking for more airspace now, what will keep you from getting more later? What will keep you from making it a cold only entry? Making it extend to the ground? The government rarely gives land back to the public after they obtain it, so even if the military does not use the airspace in the future, it would never be the same. I have flown in the area a lot and know that both Fox 3 expansions are over lots of private facilities, and the Paxon one as well. I am not trying to be a selfish recreator or aviator, just trying to get the word out. I know I am only one of many who feel this way. I want the military to be properly trained too, but I don't see a practical need for them to get that much more airspace in an area of such high public traffic, making it much more inconvenient for all the private activities that go on their. Thank you. |

I do not favor unmanned vehicles flying near Fairbanks either. The last thing I need is a robot plane hitting a goose and crashing into my house. Also, the idea of "Eyes in the Skies" above private citizens doesn't appeal to me. |

|--------------|------------|-------|--------------|---|---|
| 10038 | Mary Odden | | | Description of Proposed Actions and Alternatives (DOPAA), Cumulative Impacts, Airspace Management, Safety (Airspace), Infrastructure and Transportation, Socioeconomics, All proposed actions, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Dear JPARC Proposers: Alternative E for the Fox 3 and Paxon MOAs is a substantial improvement over Alternative A. It does not however adequately mitigate impacts to airspace safety caused by the planned low-level flight activities. Keep low-level (500' - 5000') military flights out of the Fox 3 and Paxon MOAs March through October to avoid substantial conflicts. Also there is a socioeconomic "intangible" ignored by your document. Strangely in a document representing an effort to increase the protection of American freedoms through flight training, no mention is made of the substantial reduction in civilian freedoms that the establishment and expansions of yet more Alaska military operations areas represents. You, the planners, and if, the document, absolutely do not understand what it means that you are taking away the sky. There are large ragged holes all over the state in our ability to travel, to access our homes, to look for and manage mineral and biological resources, to expand our badly-in-need-of-expansion economic opportunities. You are restricting the very freedoms you have sacrificed so much to defend. And you have put the burden on us to find out what you have taken away from us. Saving gas, a stated goal of this expansion, is a worthwhile goal, but it does not justify the losses that will result. Are you even aware of what this loss of the sky means to all of us? President John Adams (who by the way established the US Navy) once disbanded the standing US Army because he believed soldiers should never again be garrisoned in American homes. Because of President Adams, this concern is part of our Bill of Rights. What would he think about you taking the sky? This big picture concern for the JPARC expansion has no expression in this EIS document. You should put it there, and allow it to amend these proposals. The EIS also does not take into account this loss of airspace as part of the cumulative effects of past losses caused by the establishment of the large National Parks and their restrictions of airspace use and recreation, nor present losses of climate change, nor future plans for a Susitna Dam and mineral development around the Denali Highway. We are being "pinched" between these elements, and yet your EIS does not take them into account.</p> |

10038

You have created a 1400 page document which we are invited to pick apart, and yet it is blind and incoherent on the issue of freedoms being lost. We are grateful that the southern boundary of the proposed Fox 3 MOA has been withdrawn somewhat from the highest civilian activity level areas (in alternative E), but the problems presented by low level flights remain. The Nelchina Public Use Area and the Copper Basin should remain free of low-level military flights March-October to avoid conflict with bird and animal breeding and migration, wildlife and other resource management activities, transportation and access, recreation and hunting. What you have said to us in the meetings and in writing, as evidenced in this EIS process, indicates that you still do not understand how active this sky is, or how the importance of your military service depends on the integrity of civilian lives. What will you be fighting for when you take away our freedoms? We are fighting, too. Whether you know it or not, we are fighting for this place and the people who live here. Respect us. Sincerely, Mary Odden Nelchina (Glennallen) Alaska Resident of Alaska since 1980 Citizen of the United States of America

JPARC Comments
Submitted by:
Whit Hicks, resident
[REDACTED]

Points for clarification

- How much fuel will be consumed by military aircraft flying under 30,000 feet over areas that do not currently have exhaust emissions? Will there be a Title V air pollution permit for the impacted region instead of the point of takeoff?
- What studies have been conducted related to the effect of sonic concussion on wildlife, on livestock, on people?
- Have there been economic impact studies conducted to assess the impact on private, native, and State property values within proposed training range?
- What is the impact of sonic concussion on marine mammals? Are there permits required for this impact?
- Who has priority use of the areas encompassed by the range? If the people of Alaska have open access to State lands and air space, then how will the Department of Defense request permission to operate to avoid conflicts and assure safety?

Major Concerns

- An environmental permit is not a deed to the land and air space. The Alaska Constitution assures Alaskan residents equal access to resources or compensation otherwise:
 - § 16. Protection of Rights
- No person shall be involuntarily divested of his right to the use of waters, his interests in lands, or improvements affecting either, except for a superior beneficial use or public purpose and then only with just compensation and by operation of law.
- More and more often we hear "the main reason we are leaving is the increasing activities and restrictions of military in the area." I am not sure what all of the environmental impacts will be, nor do I think anyone will until the impacts are obvious; however, I do think that there is a huge potential for a negative effect on residential and recreational property values and quality of life due to the JPARC designation.

Ideas for Consideration and Comment

- Restrict training activities to no longer than two week periods, and not more than once per quarter of the year. Publicize the times and plans and take public comment before the training activities.
- Restrict to sub-sonic air speeds within 50 miles of any residence and 100 miles from any designated community.
- Publish all radio frequencies bands and power levels that will be used within the training area.
- Restrict drone flight to uninhabited areas only.
- Disclose any possibility or occurrences of surveillance on any Alaskan, whether intentional or unintentional by any Department of Defense related technology deployed in the region encompassed by JPARC, whether defined by FISA or otherwise.
- Relocate the activity to the Arctic and off shore. It would be wise to increase our presence there and it would not devalue our State and private land due to noise, safety, and the potential for inadvertent surveillance on US citizens.

Comment(s):

I am concerned with access and use of the Granite Mountain area between the Richardson Hwy. and Alaska Hwy. This is a great subsistence and Recreational use area, that should remain open to the public and area Residents. It is my strongest hope that Restricted areas south of Ft. Greely and east of the Delta River NOT be expanded any further. The Coal Mine Road Recreational use area is one of the Best local trails/Lakes etc.

Noise on the Ranges and in the air (sonic boom) effect our quality of Life. Fire potential and resulting air quality is of utmost importance! All precautions and possibly delay of planned exercises need to be considered depending on prevailing Fire (wild fire) conditions.

Use additional sheets as needed.

Comment(s):

I am particularly concerned with access to Coal Mine Rd camping and the old CAT trail down to the JARVIS CREEK area. This open forum shows there will be no changes in that particular area - land or airspace. If that is correct, fine. I appreciate the opportunity to examine this information and be a part of the planning process.

ps. I also think the land road into Tanana flats is a good idea, hopefully to minimize ATV's tearing up the trails. Again, of course if it doesn't impact hunters or hunting seasons.

Thanks

John Beckley

Comment(s):

- 1st I am retired from the Army/Army Reserve with 37 YRS, 11 Mo, 22 days, starting as a draft volunteer and retiring as a MAJOR.
- 2nd I am opposed to the proposed land-use as presented. I would like to see a minimum 5,000 Ft ATR ceiling, and no restrictions to the current use of the land for R&D, subsistence and Recreation.
- 3rd The reasons for the recommended changes are:
- A. Pilots will NOT keep a 500 Ft ceiling when game, mostly CARIBOU AND MOOSE are visible for "BUZZING". I have personally known too many pilots to allow this, and pilots have not changed since I have had them try to blow me off a motorcycle between El Paso and Alamogordo.
 - B. The noise level will stress game in particular caribou during calving and early growth. The caribou have been tightly managed to continue a healthy herd, and added stress by low level jets would adversely impact their health.
 - C. Subsistence and game harvesting use will become restricted if access to the lands is denied/impeded. Recreational use should not be denied, nor the ability to acquire meat for families. Costs here are extremely high, and many if not most of the residents of the area depend on this land for food.
 - D. I have worked in joint operations commands, and as a tactical surveillance officer have been instrumental in TSU's, hence I have some familiarity with air operations. While I recognize the need for training, I believe there are sufficient areas for low level training without denying us access to the land we currently use.
- 4th In closing, I recommend no restrictions be placed on the land not now explored to prevent civilian usage. I recommend limiting the ceiling to above 5,000 feet. I recommend no training during the calving season, and limited use during subsistence and game harvesting seasons.

James J. Hengs

To Whom It May Concern:

RE: Expansion of Joint Pacific Alaska Range Complex
(Fox 3 expansion, the new Paxon MOA, the lowering of
the MOA to 500 feet AGL)

I would like to express my concern about the possible expansion of JPARC. I do not think it would be good idea. In fact, it would be very dangerous.

There are too many air taxi operators in the area where this is proposed. Military aircraft flying at 500 feet above ground level would be a danger to these pilots, their aircrafts, and their passengers. The speed at which military aircraft fly would be a deadly combination with slow flying Super Cubs, 185's, Beavers, and Otters. The November 16, 2010 F-22 Raptor crash is an example of how things can go wrong. With more low flying high speed aircraft in the area with slow flying aircraft, there would be even greater chances of accidents occurring.

This same region is a major hunting, camping, and recreational area. I have hunted in the region for over 40 years. Many people of all ages go there to pick berries. It is a huge wildlife area, especially being a caribou migration/calving area and a moose calving area. Migratory birds (such as Trumpeter swans) pass through the area and have their nesting grounds here. Most of the hunters from Mat-Su, Anchorage and Fairbanks use this area to hunt moose and caribou. This would completely disturb this traditional hunting area. Many people who hunt live a subsistence life style. It is distracting enough with the MOA the way it is now. This would infringe upon the rights of Alaskans. We did not choose to live amid noise. We came here for quiet and solitude.

I oppose the expansion of JPARC (Fox 3 expansion, the new Paxon MOA, the lowering of the MOA to 500 feet AGL) in every way. War games should not interfere with the rights of Alaskans.

Sincerely,

Donnie Billington

To Whom It May Concern:

RE: Expansion of Joint Pacific Alaska Range Complex
(Fox 3 expansion, the new Paxon MOA, the lowering of
the MOA to 500 feet AGL)

I would like to express my deep concern about the possibility of expanding JPARC. I do not think it is a wise idea. In fact, it could be very hazardous.

There are countless air taxi operators in the area where this is proposed. Military aircraft flying at 500 feet above ground level would endanger these pilots, their aircrafts, and their passengers. The speed at which military aircraft fly would be a lethal combination with slow flying Super Cubs, 185's, Beavers, and Otters. The November 16, 2010 F-22 Raptor crash is an example of things gone wrong. With more low flying high speed aircraft in the area with slow flying aircraft, the odds are even greater for accidents.

In addition to this hazard, this same region is a major hunting, camping, berry picking, and recreational area. It is a huge area for wildlife, especially being a caribou migration/calving area and a moose calving area. Migratory birds (such as Trumpeter swans) pass through the area and have their nesting grounds here. Most of the hunters from Mat-Su, Anchorage and Fairbanks use this area to hunt moose and caribou. This would completely disturb this traditional hunting area. Many people who hunt live a subsistence life style. This would infringe upon the rights of Alaskans. Peace, solitude, and quiet are things that Alaskans treasure. It is why we live here.

I completely oppose the expansion of JPARC (Fox 3 expansion, the new Paxon MOA, the lowering of the MOA to 500 feet AGL).

Sincerely,

Cathy Teich

Comment(s):

More specificity as to Actual required use times
would be extremely helpful. For example -
Flight training will close the airspace for
2 hrs 2x per training day.

Use additional sheets as needed.

Please turn in this form at a public hearing or submit by June 7, 2012, to:
ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506
Fax: 907-552-5411; Email: alcom.j08@elmendorf.af.mil

Thank you for your input.

15 MAY 2012

Dear Sir;

I am a long time Alaskan. The Federal Government has taken over the majority of land here in Alaska. After the take over this land was closed to use by most Alaskans. It was closed for subsistence only on Federal land to those that were chosen by the Federal Government. The Federals took over management of Fish and Game on all Federal land in Alaska. You do not respect Alaska or our State Constitution. Why should we trust you after all of your broken promises. I am not willing as an Alaska resident to give you any more land or air space here in our State. If we could have back some of our respect again if you turn over management of Fish and Game on all Federal land as stated in the Statehood agreement. Why do we allow foreign nations to come into our State and train their military? All training should be done to benefit and train only U.S. military personnel. I support the military but not the Federal land grab here in Alaska. The Federal Government is using the military to grab more land. It will never end, you will never be satisfied. I do not trust you.

GRAY L. CORLE

Gray L. Corle

God Bless America, God Bless Alaska, Alaskans

Comment(s):

I would like to express my opposition to expanding the JPCA area.

I believe the noise, sonic booms, night flights will have a negative effect on the local wildlife & migrating wild birds.

We use this areas for hunting and recreation. And live in Unit [REDACTED]. We ~~also~~ believe that the areas MOA Fox 3 are not necessary.

~~We ~~also~~ believe that~~
We would like to see Fox 3 MOA eliminated from your proposed expansion.

Use additional sheets as needed.

|--------------|-----------------|-------|--------------|--|---|
| 10049 | Heather Heusser | | | 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Our family has a cabin on Lake Louise that has been in the family since my husband's grandfather homesteaded the land in the 1950s. The family has been enjoying the area ever since. It is a wonderful recreation area, decently populated, but not the busy party place that Big Lake was during my childhood. I want to see the area remain a family recreational area so that our children and grandchildren can enjoy the area just as my husband and his parents have. It's hard to enjoy the solitude of a nice calm, quiet lake when a high-speed aircraft, such as an F-22, flies over you at low altitude. Not to mention the moose and caribou, which are well documented in the area, may be driven out of the area due to the noise. We are strong supporters of the military, having friends and family who serve. We understand that training is important, but feel that a proposal exists that will meet both military and civilian needs. It comes down to concurrent use. While I understand that the EIS process is a Federal process, I personally believe the State of Alaska, Article 8 Constitutional Mandate "encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest" is a statement that should be followed with all public land and resources. And that is exactly what we have here, a resource that needs to be shared. I feel that Alternative E, with an additional stipulation to add an Overflight Avoidance Area of an additional 20 miles north and parallel to the southern border of Alternative E. This would move the southern boarder back and additional 20 miles from the proposed Alternative E boundary and when maintained year round would address resource concerns. In short with the additional stipulation to Alternative E would benefit both parties – the military to do their training maneuvers and the public to have recreational and subsistence uses.</p> |

| I0050 | Noel Robinson | | | Land Use | My cabin is approximately 18 miles south of Ft. Greely. It is U.S. Survey 53.57. It is a short distance from the pipeline. No one lives there at present but we intend to fix it up and have it available for family. One of my concerns is that rockets frequently go astray and explode in vulnerable places. Have any added precautions been put in place to prevent this? |

Description of Proposed
Actions and Alternatives
(DOPAA), Cumulative
Impacts, Physical
Resources, Water
Resources, Biological
Resources, Cultural
Resources, Land Use, All
proposed actions | Dear decision makers, The vast expansion of the military training ranges in Alaska under the Joint Pacific Alaska Range Complex proposal to use the 25,000 square miles of land in the Talkeetna, Lake Louise, Paxson, and Cantwell areas greatly disturbs me. Although I am a staunch supporter of our military and its needs, of all places in Alaska, I don't want it there. To me, that has to be the worst choice of location in Alaska. It is my favorite camping, hunting, and fishing recreational area that is within range of my home. It's loaded with fish and game. Given the size of Alaska and the wide array of suitable terrain available in Alaska, please, put it somewhere else and don't destroy our opportunities there. No matter where you put it, the military can get there. That's my two cents. Thank you.
Respectfully submitted, Tom Braund |

| I0053 | Harry Gay | Individual | n/a | General (to the EIS), All resource areas, All proposed actions | <p>I am a strong supporter of our Military and the need for training. I must submit a strong resistance to this expansion of land consumption by the Military. I live in Delta Junction and have first hand experience and knowledge of the misuse and mismanagement of the land ahead under "training areas". The military could use better management and do all needed training in half the space they already have. The military does not clean up it's mess and just expects to move on to new land. The Military abuses the rules and regulations of their own making. Until the military is willing to clean up it's left behind pollution and problems, I do not wish to have then consume more land that I use to hunt and fish on. I strongly oppose this expansion and will voice my feeling to all that I come in contact with.</p> <p>Sincerely Harry Mitchell Gay</p> |

| I0054 | John Schandelmeier | Chair | Paxson Fish and Game Advisory | General (to the EIS), Purpose/Need, Cumulative Impacts, Noise, Socioeconomics, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA | The proposed MOA expansion near Paxson is outrageous. At the present time, the Air Force doesn't monitor it's own activities---frequent violations of their own rules regarding flight levels, MOA boundaries and sonic booms along the Denali Highway and in the Paxson area are a testimony to this. Instead they ask the public to call in, after the fact. There is no need to expand the current MOA. Instead, I would ask for 10 mile wide corridors along both the Richardson and Denali Highways. To have low-level F-16 traffic in populated areas is not only disrupting, it is unsafe. In an area with poor communications, there is little opportunity for local citizens and the many out-of-State and out-of-country visitors to the area to be informed when the MOA is live. |

From: Don Smith [REDACTED]
Sent: Monday, May 28, 2012 11:38 AM
To: ALCOM J08 Admin Box
Subject: JPARC initiative

I am requesting an extension of the JPARC initiative. The volume and complexity of the JPARC initiative should necessitate a minimum of 90 days for public comment. To move forward without ample public review opportunity would be contrary to the spirit of the National Environmental Policy Act and will have a continued negative impact on the relationship between the public and military.

Sincerely,
Donald M Smith III
FAA Licensed pilot
AOPA member

20 MS. ODDEN: Okay. Well, I hope to give a better more
21 detailed and objective statement written. This is a perhaps
22 emotional reaction or perhaps socioeconomic, whatever you want
23 to call it. We are mostly concerned with the Fox 3 MOA
24 expansion and especially with the low level and the effects on
25 commercial aviation, general aviation, people getting to their

I0057

1 homes, wildlife management. But we're concerned in general
2 about the appropriation of land and sky resources in Alaska in
3 general and we're not unappreciative of what the military is
4 doing for us, so please don't think that we are.

5 John Adams, second President, father of the U.S. Navy,
6 established the U.S. Navy, once disbanded the standing U.S. Army
7 of the United States even under the threat of conflict with
8 France at that time because he believed the soldiers should
9 never again be garrisoned in our homes. He thought that was a
10 substantial reduction of our freedoms that Americans should
11 never be subjected to and because of his concerns that is in our
12 Bill of Rights today. We do not have soldiers garrisoned in our
13 homes, Americans do not. What would John Adams think about the
14 military taking our sky above our homes in so many areas? What
15 should we think about it, what should you think about it as
16 members of the military?

17 You've heard about what we think is a treasure chest of
18 resources in our area. Some of the only recreation area, the
19 public -- Nelchina public use area that we've worked hard since
20 the 1970s to maintain for snow machines, for airplanes, for
21 hunting, for the exploration for oil and gas, for many levels of
22 public use and we didn't want the restrictions that were put
23 elsewhere by the national park. We didn't want the restrictions
24 on people's basic freedom to do those things. We wanted to
25 share the use. It's not empty space. We've worked hard to keep

I0057

1 that space free for the development -- economic development,
2 maintenance of our wildlife stocks, our fish.

3 You've heard about the noise levels at Paxson Hatchery,
4 that they can't slam a door at certain times a year, they cannot
5 play music in the fish hatchery where this very important red
6 fishery hatchery for the whole Copper River loses the fry. We
7 have deep concerns about the expansions of these MOAs.

8 This is the age of digital reality. We don't want you to
9 kill young pilots. We want you to have the simulations, we want
10 you to be able to go over the terrain. We've worked in Alaska,
11 since the 1970s we've worked around the MOAs out at McGrath, up
12 north at Fort Yukon. We know that you spend the same amount of
13 gas when airplanes go like this or if they go like this. That's
14 the same amount of gas. The reality is that the MOA does not
15 have to come over the top of us. You can keep it north, you can
16 keep it further north than 20 miles and we believe that you
17 should stay above, caution, 5,000 feet.

18 Okay. You who have given much to us to protect, our
19 freedom, and we know what that means. There's people in this
20 area that have lost their kids to the wars overseas. Do not
21 proceed with plans which reduce our freedoms. We've lived here
22 a long time. This is important to us. Be careful, careful how
23 you do this. Thank you.

24 COLONEL ORR: Ma'am, before you sit down, I do this in
25 court a lot. When people use their hands it doesn't translate

I0057

1 onto the -- so can you describe what you were doing with your
2 hands?

3 MS. ODDEN: You have an air.....

4 COLONEL ORR: Take as long as you'd like.

5 MS. ODDEN: You have an airplane at point A and point B
6 and they want to do an exercise between them. They spend the
7 same amount of gas if they meet in the middle or if airplane A
8 stays where it is and point -- and airplane at point B goes to
9 meet it. Does that adequately -- does that get it?

10 UNIDENTIFIED MALE: I understand it.

11 COLONEL ORR: Okay.

12 MS. ODDEN: Okay.

13 UNIDENTIFIED MALE: Thank you.

14 MS. ODDEN: Thank you very much.

11 COLONEL ORR: Thank you. Our next speaker is Gloria
12 Slick.

13 MS. STICKWAN: Stick.

14 COLONEL ORR: Stick?

15 MS. STICKWAN: Stickwan.

16 COLONEL ORR: Okay.

17 MS. STICKWAN: I've just begun to read this EIS. A lot of
18 this is new to me, so I'm trying to read through it and
19 understand what I'm reading through. I want to first say that I
20 have family members that are in the Navy and in the Army and I'm
21 proud of them. I respect the military. I respect what you're
22 doing for our country.

23 I just want to say that I have a concern about the low
24 level flights, especially when we're out camping, hunting,
25 fishing, you know, how it'll affect our subsistence, customary

[REDACTED]

10 Those are my concerns mostly is the hunting and fishing
11 and being able to continue that and -- without interruption or a
12 lot of noise and to the wildlife management, being able to make
13 sure those wildlife stay out there and they're healthy and
14 they're not being destroyed, or damaged, or ruined, or taken
15 away from us. Thank you.

6 COLONEL ORR: Thank you.

I0060

[REDACTED]

21 MR. ALCOTT: What's up with that. My name's Gary Alcott
22 and I get some very....
23 UNIDENTIFIED MALE: (Indiscernible).
24 MR. ALCOTT: All right. A-L-C-O-T-T. Louise May was my
25 mom. Yeah, Gary. So probably my biggest concern is with the

[REDACTED]

I0060

1 hatchery and stuff too because I think that's such a huge deal.
2 But I really feel the need, you know, to have these live
3 exercises and stuff and -- but probably don't want it right here
4 where it's going to damage the hatchery. But I definitely --
5 you know, you can fly over my house down in there anytime you
6 want, you know. I get my pacemaker struck up there a little
7 bit.

8 But the other thing I'm thinking is I know -- now, you
9 know, our pilots I'm sure would not violate any, you know, drop
10 down and go for it, but we also have other pilots, right, that
11 do these things from all over the world, you know, England and
12 whatever. So, you know, maybe our guys might get in a little
13 bit of trouble if they did something like that, but you might
14 not be able to control the people from the other countries. And
15 so, you know, it just takes one jet, go down there go right over
16 the hatchery and just like wasn't that a blast. But -- you
17 know, and then that's done.

18 So anyway, I really want all the training because you look
19 at what our Air Force does and stuff in the world and dominates
20 like that. Well, they don't do that on computers, you know,
21 they got to have it. So -- but I guess the hatchery's my
22 biggest thing I'm worried about because it is such a huge thing
23 and it doesn't even look like it, you know. So a lot of people
24 don't even know it. So anyway, I guess that's it. Oh, sorry.

I0061

■ [REDACTED] ■
■ [REDACTED] ■
■ [REDACTED] [REDACTED] [REDACTED]
■ [REDACTED]

5 MS. RODINA: My name is Jenny Rodina, spelled R-O-D-I-N-A.
6 And this is a comment period, but it's kind of a question also.
7 My question comment is about the alternative E for the Paxson
8 MOA. It's stating that there's the potential for moving the
9 southern boundary of the Paxson MOA north by approximately 20
10 miles because residents around Lake Louise complained about
11 potential noise and there are also impacts to residents, tourism
12 companies and other organizations in that area. And the
13 alternative E was proposed after the public comment -- the first
14 public comment period. Well, my question is a number of us here
15 in the Paxson community also made public comments about noise
16 and impacts to residents and tourism companies in this area. So
17 my question is if you're listening to the people in Lake Louise
18 and moving the southern boundary of the Paxson MOA by 20 miles
19 why not move it 20 miles north of Paxson as well.

20 You already state in your literature that there are
21 significant adverse impacts for socioeconomics, land use and
22 noise. You already know that these are potentially big problems
23 and we know it too. So I'll just make the comment again
24 verbally that we'd like for you to listen to us here in Paxson
25 just the same as you listened to the folks down by Lake Louise.

[REDACTED]

I0061

Thank you,

[REDACTED]

[REDACTED]

June 2013

I0063

[REDACTED]

15 MS. MACCALLUM: Yeah, I might as well.

16 COLONEL ORR: All right.

17 MS. MACCALLUM: Oh. My concern too is with the hatchery.

18 UNIDENTIFIED MALE: Your first name, spell....

19 MS. MACCALLUM: Oh, Nancy MacCallum. M-A-C capital C-A-L-
20 -L-U-M.

21 UNIDENTIFIED MALE: Okay.

22 MS. MACCALLUM: My concern -- my first concern is with the
23 hatchery. They are -- they do a wonderful job and they're a
24 very necessary part and they're a great part of our community.
25 And I also look as a lodge owner. As you can look around and

[REDACTED]

7 But again, I go back to the hatchery. The hatcheries are
8 wonderful neighbors of ours. They rent from us. They're great
9 people, they do a wonderful, wonderful job and I do not want to
10 see anything happen to their fish. Thank you.

[illegible]

I0064

6 COLONEL ORR: Our next speaker is Ms. Judy Olson Hicks.

7 Got it?

8 MS. OLSON HICKS: Uh-huh (affirmative). I am Judy Olson
9 Hicks and I represent just me. But as a citizen of Delta I know
10 that tonight is a major scheduling conflict for our small town
11 in that it is high school graduation and so many of the leaders
12 in our community are not available to come here tonight. I also
13 noticed that there were no signs posted up at our grocery store
14 where everyone goes or at our post office about this meeting.
15 There was nothing published on our website about this meeting or
16 in our local newspaper. So I feel as if trying to engage the
17 public in this very important meeting was not really done in
18 earnest or not done with truly getting to know who we are.
19 Thank you.

20 COLONEL ORR: And could you spell your name.....

21 MS. OLSON HICKS: Yes.

22 COLONEL ORR:for the.....

23 MS. OLSON HICKS: J-U-D-Y, O-L-S-O-N, H-I-C-K-S.

■ [REDACTED] ■
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
8 MR. QUARBERG: My name is Don Quarberg, Q-U-A-R-B-E-R-G.
9 I'm a private pilot and a hunter and I'm here to represent
10 myself. But maybe what I have is a request and some
11 observations, but, you know, I preface this with saying that we
12 appreciate everything you fellows do. Not only fellows, Armed
13 Forces Service. We don't want to jeopardize your mission and
14 training and we want you to be the best prepared that there are
15 when we ask you to step into harm's way and so we all appreciate
16 that.

17 Game Management 20A which is out here to the west of Delta
18 and south of Fairbanks is one of the most intensively managed
19 game management units in the state. It currently has a very
20 healthy population of most -- in fact you could probably pick up
21 a Sports Afield or a Petersen's Hunting magazine and read about
22 20A in there. As I look at the EIS and what is planned for that
23 activity, and I've hunted over there for over 30 years. It's
24 beautiful, nestled in between Mount Hayes and Mount Moffit where
25 I go and it looks like it's over. Unless we look at all the

■ [REDACTED]

I0065

1 opposition, if you will, I don't even know what's controlled
2 opposition, people that have concerns as Representative Feige
3 mentioned over on Lake Louise and the pilots and things like
4 that. This area is accessed by a number of air taxis and
5 transporters, it's accessed by a number of guides, it's accessed
6 by a whole array of private hunters and recreators of which the
7 military is well represented. I hate to lose that and I wish we
8 could share it and I think we can. And the way we can share
9 that is if there was some way we can impress upon the military
10 to maybe adjust their scheduling just -- because I would guess
11 that 90 some percent of the use over there, recreational use, is
12 during the month of September, maybe from August 15th on. And
13 Range Manager Sharp that retired from Fort Greely was a hunter,
14 like probably all of you are. He had the ability to schedule
15 maintenance on the range during September. An OCA who was in a
16 Cub could putz around out there, you know, and go hunting and
17 whatever we had to do and we didn't conflict with anybody. Past
18 couple of years we've had a little bit of an off flavor with the
19 scheduling because we've had people that schedule years in
20 advance, for example, especially with commercial operators.
21 With me it's my relatives coming up when we go hunting. And
22 they're sitting there with airline tickets and all of a sudden
23 they close it, the air space is closed. And that's the way we
24 get in there. Most of that's all fly in. And then of course we
25 call Representative Feige or Murkowski or whatever happens and

4 And I don't know who to ask, but I think there's some
5 pretty good minds in here that could probably get that to the
6 right place. And so if there's any way possible to schedule
7 this. You know, in addition to us flying around, at that time
8 there's lots of cranes and waterfowl and things like that and
9 it's a little bit hazardous too, even for us, you know. We
10 don't -- they can almost out fly me, so they can get out of my
11 way but not with an F-16 or a 22. I guess that's, you know, the
12 gist of my request is look at scheduling, see if there isn't
13 some way we can accommodate both of us. Thank you.

16 THE REPORTER: Could I ask you to spell your name for the
17 record?

18 MR. MUSGROVE: Yeah. Jay W. Musgrove, M-U-S-G-R-O-V-E.
19 I'd like to echo Don Quarberg. We're glad that -- for the
20 opportunity to make a comment and all the effort that they have
21 obviously put into this. Some people don't agree with pieces
22 and parts of it, but I personally appreciate the fact that we
23 have a military and we want them to keep strong and capable.
24 And of course at any -- sometime in the future what they may
25 need as far as equipment will change and that's something that

[REDACTED]

10 COLONEL ORR: Thank you.

12 COLONEL ORR: Any additional comments? Yes, sir.

13 MR. QUARBERG: May I make a request?

14 COLONEL ORR: You may.

15 MR. QUARBERG: (Indiscernible). As long as I don't have
16 to do anything. This is Don Quarberg again. My request this
17 time is to the Army and it -- I made some comments earlier about
18 the Eielson range control and that special use airspace
19 information service that they have where we can call an 800
20 number and talk to them in the air. And, you know, they'll
21 really accommodate us pilots that are flying around because if
22 the 16s or 15s or whatever it is are out of the way they'll tell
23 us how long is it going to take you to get across there and I
24 tell them 35 minutes. You can hear them gasp a little, you
25 know, but they'll say go ahead but call us when you get there

[REDACTED]

I0067

1 and of course you don't ever forget that because they'll -- be
2 out there with them.

3 But the -- what I really want -- would like from the Army
4 is they will take -- a prime example is restricted area 2202
5 alpha out here and that's where they're apparently flying these
6 UAVs. And they will inform the Air Force that this -- they're
7 going to be hot, active, tonight from 5:00 o'clock to forever
8 and it'll be that way sometimes through Monday or Tuesday. You
9 know, and I realize I can't hear one, can't hear much anyway,
10 but -- and you can't see them. So after awhile it's kind of
11 like hollering wolf, you know, I don't think anybody's out
12 there. But the Air Force will let us through, you know, they
13 know the current status. And I don't know what the
14 complications are to be able to provide the same kind of
15 service, but if you could do that it would be deeply
16 appreciated. Thank you.

I0068

1 you know, directives. And I do appreciate the military and I
2 thank the young men for their service to our country, but I
3 would like to feel that we had more respect for each other in
4 these kind of proceedings that what we say will actually be
5 heard. I have some of the same concerns that other people
6 mentioned tonight and wildfires are definitely one of them. At
7 times the military will choose not to fight a wildfire that they
8 may or may not have caused across the river with ordinance fire
9 and that's -- it's not threatening the town or anything, but it
10 can -- it impacts our air quality and over the course of a
11 summer, depending on how many fires happen, air quality can be a
12 significant thing in Alaska. You don't -- you know, you don't
13 think about that, but wildfire season is -- can be pretty
14 hazardous for people with any young children or respiratory
15 problems, allergies and stuff.

16 I'm concerned with access and use of the -- to the Granite
17 Mountain area between the Richardson Highway and the Alaska
18 Highway. This is a great subsistence and recreational use area
19 that I hope will remain open to the public and area residents.
20 It's really my strongest hope that this -- the reservation of
21 Fort Greely not expand anymore southward into that area because
22 it's already pretty close. And, you know, we're out there in
23 the fall, I'm out there berry picking and fishing when Don's
24 hunting. So it's just a great area. Noise is some concern, but
25 I would have to say it would be access and wildfire for me.

I0068

Thank you very much.

■ [REDACTED] The first speaker this
5 afternoon is Mr. Jay Harris.

6 MR. HARRIS: Is this the microphone? Yes.

7 COLONEL ORR: It doesn't amplify, it just records.

8 MR. HARRIS: It doesn't amplify? Okay. Yes, I'm here
9 today in protest of civilians being killed by drone attacks in
10 Pakistan. I think that this should be addressed in this forum.
11 My concern is that much of the testing that is being done isn't
12 taking into account the need to protect civilians in battle
13 zones and it's really my opinion that sometimes drones are
14 misused to actually depopulate areas of northern Pakistan and I
15 hope that this will be addressed today. Thank you.

9 COLONEL ORR: All right. Our next speaker is Ms. Anna
10 Godduhn.

11 MS. GODDUHN: Thank you. Do appreciate the opportunity.
12 Hello? Okay. The mic's not working, so I'll just talk loud.

13 COLONEL ORR: No, it doesn't amplify, it just records.

14 MS. GODDUHN: Oh, it's a recorder. Okay.

15 COLONEL ORR: Right.

16 MS. GODDUHN: You probably said that before. I don't have
17 comments prepared and I regret that because I understood and
18 last year for the scoping meetings the public comments were
19 taken in a closet, so I wasn't inspired by that. So I didn't
20 write these comments down, but I do object to this expansion on
21 both local and global grounds. I personally find the sounds of
22 fighter jets and bombs dropping very, very deeply disturbing.
23 And I can hear them from my house way out in northwestern
24 Fairbanks and I'm on the other side of campus, you know, well
25 away from Wainwright. But I can hear those bombs and it is

[REDACTED]

[illegible]

I0072

[REDACTED]

14 COLONEL ORR: Thank you. Our next speaker is Mr. Robert
15 Mulford.

16 MR. MULFORD: Thank you. I have spent much of the last
17 two and a half years or so attending conferences as a systems
18 integrator engineer at The Institute for Defense and Government
19 Advancement conferences. I've been briefed by generals like
20 General Peter Chiarelli, General Michael Vane, heads of DARPA,
21 et cetera, on some of the new technologies that I think your
22 JPARC expansion is going to be using.

23 You talk in your preamble about these technologies. These
24 are pretty horrific technologies. They're very invasive and
25 they're also very destructive and there's no way to protect

[REDACTED]

I0072

1 civilians from them. And they also find use inside Homeland
2 Security in the United States. I've heard the head of the
3 Department of Homeland Security's commercialization department
4 say to a group of Lockheed Martin and Raytheon (ph) people, hey,
5 you write a 10 page white paper, you can get \$20 million to
6 design some of these anti-terrorism systems. This is all linked
7 together.

8 And your weapons, your drone operators, your drone
9 navigation operations and your drone sensor controls, all this
10 are all based on commercial off the shelf technologies. These
11 are technologies that anybody, a kid with facial jewelry, can
12 learn how to program. You know that it's going to be -- there's
13 going to be proliferation of these technologies and I'll bet you
14 that is why we now have a cyber command in the United States.
15 This is going to come home to us in the United States. This
16 network centric warfare that your -- Admiral Cebrowski started
17 years ago and what your doctrine is all about is going to come
18 home to bite the people in this country. And I'm sure opposed
19 to it and if I can stop you any way and how I'm going to. Thank
20 you.

I0073

[REDACTED]

14 COLONEL ORR: Thank you. Our next speaker is Mr. Tom
15 Lamal.

16 MR. LAMAL: My name is Tom Lamal and the comments I have
17 to make are mostly on the Paxson area for pilots. And I would
18 like to see for this area for safety reasons two corridors in
19 the area, one down the Richardson Highway that's high enough
20 that if there's turbulence that private pilots can get out of
21 that and also wide enough that if there's snow squalls or
22 thunderstorms that they have enough room to maneuver around
23 those. Also another corridor I'd like to see is on the Denali
24 Highway going more east and west from Paxson over to Denali Park
25 and also wide and high enough for safe flying for private

[REDACTED]

I0073

1 pilots. And another area on the Paxson would be towards Tok
2 that if the area was drawn farther away from the highway, maybe
3 to the foothills of the Alaska Range, so that safe passage could
4 happen along there and maybe have it up to an elevation of the
5 foothills of 5,000 feet or something like that, I'm talking
6 about ground elevation, so that people could fly towards the
7 Canadian border without having air restrictions along that area.
8 If that was pulled in I think it would make it a lot easier for
9 people to travel back and forth, myself included. Thank you
10 very much.

■ [REDACTED]

■ [REDACTED]

■ [REDACTED]

■ [REDACTED]

11 COLONEL ORR: Thank you. Our next speaker is Mr. Chris
12 White. Right over here, sir.

13 MR. WHITE: My name is Chris White. I've been up in --
14 living here in Alaska for 30 or 40 years and I like to hunt and
15 trap and fish and I'm kind of concerned how this is going to
16 affect the people who hunt and fish in that area. So I hope as
17 soon as you can get that thing sorted out because if you have to
18 restrict that area we'd like to know what these restrictions are
19 before we go along with this thing.

20 Another concern that I have is that if this -- using these
21 drones, it doesn't seem to be too good for the people that get
22 hit by them and it seems there's quite a few where it's been
23 used kids are getting killed because of the inaccuracy of these
24 things. But apparently it gets accurate enough, sometimes it
25 isn't. So people -- my concern would be that when the military

[REDACTED]

I0074

■

1 starts using this stuff it'll start using them on civilians.
2 When the business communities come together with your military
3 communities we end up getting more authoritarian type government
4 and that's on a road to fascism. You got to be careful with
5 that slide because we don't want to live and lose the republic
6 that way.

7 So that's another concern I have, not just the hunting and
8 the fishing and the trapping, but how big of an area are you
9 going to be taking over in square miles to do these exercises.
10 And we're kind of concerned you might have the people on the
11 other side getting hit with this stuff regard us as terrorists
12 and if we start mirroring that way of doing business with drones
13 just dropping out of the sky, boom, if we start mirroring their
14 behavior. And we've seen this with, you know, our government
15 with torture even. They actually think it was okay at one
16 point. If we start seeing us going that was this is not good
17 for the republic.

18 So besides hunting and fishing and trapping in those areas
19 you're about to use is also the broader issue is this going to
20 harm the republic as we know it. That's my concern, sir.

■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]
■ [REDACTED]

[REDACTED]

4 COLONEL ORR: Could you spell it for him please?

5 MR. OSBORN: O-S-B-O-R-N. I've been here 45 years and
6 I've come to love this place a great deal. My concern today is
7 that I believe firmly that our nation is in decline. We are a
8 hair breath away from insolvency in so many areas. I think
9 there's no business whatsoever expanding the military presence
10 in our state at this critical time. We need money for people
11 and what they need, not to fight a phantom enemy which doesn't
12 exist. There's no state actor in today's world that demands our
13 high level of technology. That's a fallacy. So I would say I'm
14 categorically opposed to expanding JPARC and that's a big thumbs
15 down to JPARC.

[illegible]

I0076

[REDACTED]

20 MR. HARRIS: I'm John Harris and I had a few comments to
21 add to my prior comments. I want to remind everyone here that
22 the media grossly misrepresents the use of drones and their use
23 in Pakistan. The evidence that I've been able to gather clearly
24 indicates that the drones are being used for much more than
25 isolated targeting of particular individuals. I believe that

[REDACTED]

[illegible]

[illegible]

I0078

[REDACTED]

23 MR. AMEEN: My name is Rasool Ameen, last name A-M-E-E-N.
24 All right. Good evening everybody, thank you. I guess my main
25 concern is the unmanned drones. That's my main concern. I

[REDACTED]

I0078

1 already know of several places in the United States where drones
2 are being used to gather intelligence on American citizens. Now
3 I understand the need for this as far as military training and
4 everything, but nothing in the world is constant. We don't live
5 in a vacuum and everything that's happening in our country and
6 around the world is connected. We're seeing more and more
7 people overseas who are discontented. We're seeing in our own
8 country discontented people. I mean I was watching PBS news
9 hour last night and the Congress just passed a huge defense
10 bill. Now I understand we need a strong defense, we do, but
11 we're living in a time where we just came through an economic
12 collapse where they're -- many of our fellow citizens are
13 hurting. I mean the latest figures, over 46 million people are
14 out of work. There's a lot of discontented people. We see that
15 on the news, we see that in protests, we see that in things that
16 are happening.

17 So my biggest fear is I understand that this is right now
18 being used militarily, but, you know, it's happened before in
19 history and I see it happening again, that we have a lot of
20 citizens who are discontented and if this technology is already
21 being used to gather intelligence on our fellow citizens who
22 decides -- who is deciding what is a threat. I mean who makes
23 the decision that says an American citizen is a threat? And if
24 we're using this technology on citizens what's to stop us from
25 using other tactics?

I0078

1 I mean I remember reading a story in 2002 about the -- I
2 believe it was Vice President Chaney at the time, I don't -- you
3 know, I don't know, but I read a story about in Buffalo, New
4 York, they were considering sending in Delta Force on American
5 citizens and when I read that I was like wow, this is -- I don't
6 know, this is strange. And I really hope that, you know, we ha
7 -- we as a country do not allow ourselves to become so paranoid
8 that we find it necessary to use this technology on our own
9 citizens because I -- everything that I've seen what's going on
10 in the world, I don't see it getting any better. I don't see
11 our economic situation getting any better. Europe is already
12 desperately in need of help as far as the Euro is concerned and
13 that's just going to come over here. So I mean there's a lot of
14 potential for a lot of bad things to happen and I guess I'm just
15 hoping and praying that these things are not abused 20, 30, 40
16 years down the road, you know, when things do collapse here.

17 I mean take a look at Hurricane Katrina for example. You
18 know, that was a natural disaster and you had cops, you know,
19 pretty much well meaning people, I'm sure when they joined the
20 force, you know, were shooting American citizens. And this was
21 a natural disaster. This wasn't an economic collapse, this
22 wasn't, you know, hey, I can't put gas in my car anymore because
23 there's no more gas flowing. You know, this was a natural
24 disaster so I can only imagine with all of this technology we
25 have when our society does get to that point, you know, do we

I0078

1 have assurances that our own technology will not be turned on
2 our own people. That's what frightens me about all of this.

3 As far as seeing this thing here about a helmet on the
4 head of somebody sitting at a computer controlling drones, you
5 know, is there going to be any psychological tests for the
6 people who are controlling these drones? I mean what are the
7 safeties? What are the stop gaps here?

8 As far as the socioeconomic impact on Alaska, I mean, you
9 know, we've al -- we're -- I mean -- okay.

[REDACTED]

[REDACTED]

I0079

[REDACTED]

20 MR. AMEEN: Okay. Just briefly. As far as the -- I'm
21 coming back to the drones again because I'm sure we've all seen
22 it on the news, we've all read the reports. I mean even using
23 it militarily there are mistakes that are made by these drones.
24 And my con -- my big concern about it is we haven't perfected
25 this technology, but we're pushing forward with it. We're still

[REDACTED]

I0079

1 using it and we haven't perfected it. I'm reading on here about
2 this quasar thing that they unveiled where somebody's sitting
3 there controlling these things and I -- my thinking is are there
4 standards that these people have -- that they have to meet to
5 control this? You know, are there psychological tests, you
6 know, like police officers have to take before they're allowed
7 to join the force? I mean what are the safeguards and the
8 assurances that these things are not going to be happening here
9 and that's what concerns me about it.

10 It's -- you know, it seems to me like our society, we're
11 going -- we're getting to the point where we're trying to mask
12 what war is really about. I'm a veteran myself. I was an
13 infantryman and I did one combat tour to Iraq. And it seems to
14 me with all of this, you know, we're about subtracting our
15 manpower, but we're -- it seems to me we're masking the real
16 pain and horror of war. When it gets to the point where it's --
17 where you can talk easily about war then something's wrong, you
18 know, something's wrong in our society. And, you know, war
19 should -- the pain and horror of war should be known because it
20 should be the last resort of any government and it seems to me
21 that we're getting to the point in our society where every --
22 where things are going to be controlled by computers and it's
23 easier not to put a face to that. You know, and that scares me,
24 the fact that war is becoming easy, almost like a video game,
25 like we're sitting around on Xboxes playing Call of Duty or

[illegible]

I0080

[REDACTED]

5 MR. GRAHAM: Yeah, it's Robert Graham, G-R-A-H-A-M, and
6 I'm a missionary pilot up here in Alaska. I fly to and from the
7 villages taking supplies, clothes, diapers, so on and so forth
8 in. I've brought 400 missionaries up since 2008 and I just want
9 to make sure that aviation traffic to the general public
10 wouldn't be shut down and restrict when and where we fly already
11 -- more than what it already is. That's pretty much all I have
12 to say.

[REDACTED]

[REDACTED]

I0081

[REDACTED]

18 And I think that covers all our preliminaries and if we
19 could begin the -- with the first speaker, Brian Okonek.

20 MR. OKONEK: My name is Brian Okonek, last name is spelled
21 O-K-O-N-E-K. Thank you for this opportunity to comment. I'm
22 most familiar with the Fox 3 MOA area. I understand the
23 military's need for practice areas, but also feel that the
24 military practice areas or the practicing that's being done on
25 these areas has a huge impact to other users on the ground.

[REDACTED]

I0081

1 There's -- it's very, very hard, even as big as Alaska is,
2 to find areas where there's truly natural soundscape and it's
3 becoming ever more difficult. I used to run a guiding business
4 and we would take people on wilderness backpacking trips and
5 their stereotype image of the wilderness was a place for the
6 most part devoid of human and mechanical noise.

7 We had a business for quite a few years going to an area
8 that we took very small groups. We didn't visit it very often.
9 But as aircraft traffic continued to increase in this state we
10 started getting comments from our visitors that they were
11 surprised by the amount of aircraft noise and finally it got to
12 the point that we got enough negative comments about aircraft
13 noise that we had to quit using certain areas that we had
14 traditionally used because of over flights. It just didn't --
15 it didn't go with their vision of what wilderness is. Quality
16 wilderness really needs quality soundscape.

17 I was very disappointed to see that there were only two
18 real alternatives left for the Fox 3 area, that alternative A and
19 alternative E, and they both had flights -- minimum flight
20 altitudes that went down to 500 feet. That's really low and
21 it's really low when you have fast moving aircraft and aircraft
22 coming like over a ridge top when you're in a valley. It's just
23 amazing the impact it has on the ground. High flying aircraft
24 you slowly hear it coming and the noise gradually gets louder
25 and then as it goes over it's the loudest and then it dissipates

[REDACTED]

I0081

1 as it flies away, but when you're in a valley and you suddenly
2 have an aircraft, even a 185, pop over a ridge it's a real shock
3 to the whole valley. You don't hear it coming and all of a
4 sudden you've got this full impact of the noise and it really
5 changes an experience when you're on the ground, have this type
6 of activity.

7 I'd really encourage you to go back and reevaluate that
8 minimum altitude. This Fox 3 area is a very popular area for
9 people on the ground, people backpacking, people fishing, people
10 rafting, people hunting. There's a lot of use. Just look on
11 the map of where it's at. It's close to Anchorage, it's close
12 to lots of urban areas. It's between all the highway systems in
13 the state. It's one of the easier places to access and actually
14 get a wilderness experience from a road. But as you go into it
15 you end up getting more and more air traffic.

16 The natural soundscape matters for the animals too.
17 There's -- it's very hard finding definitive sound studies and
18 how they affect animals and birds. I -- I'm on a -- a member of
19 a over flights committee for Denali National Park and we've had
20 access to a long, long list of sound studies and many, many,
21 many are inconclusive and hard to substantiate just the impacts,
22 but some of them do indicate that there's -- puts animals at a
23 high stress level, especially during calving and lambing
24 periods. The Nelchina caribou herd is in this Fox 3 area. One
25 of its main calving areas is right in the middle of your MOA,

I0081

■

1 your MOA, and there's also a lot of sheep in the Talkeetna
2 mountains and in the Alaska Range and their lambs are very
3 sensitive to disturbance by noise. I encourage you to work
4 very, very closely with the Alaska Department of Fish and Game
5 to find out just where these areas are and consult with them
6 each year to find out where the caribou are calving to try to
7 create a bubble over those areas to protect them. It's quite a
8 long period. It's not just the day they drop their calves
9 that's the critical period. It's the first couple months of
10 their life. They're very small young calves trying to stay with
11 the cows and major noise disturbance can separate them and
12 create problems.

13 And like I -- my question I had about the mitigating, many
14 of your mitigating factors are very much educational. I'll just
15 continue just a few minutes here and wrap it up. And I -- and
16 you did explain that there are other ongoing mitigating factors
17 going on, but I think you need to really concentrate on some
18 mitigating factors that will protect critical areas within these
19 -- all these MOAs. Thank you very much.

I0082

[REDACTED]

20 COLONEL WEISS: Mr. Schapansky.

21 MR. SCHAPANSKY: Thank you. My name is Elwood Schapansky,
22 S-C-H-A-P-A-N-S-K-Y. I'm a retired local glacier pilot so my
23 point of view will be that of a pilot rather than of a person
24 interested in wildlife. I'm also interested in wildlife. We
25 make many trips to see that from the air and do our best not to

[REDACTED]

I0082

1 disturb anything.

2 My main concern tonight is that this is like a planning
3 stage and that our words won't be heard by the FAA. The FAA
4 should be here ultimately and so that's my first comment. I
5 would like to be able to say these words to people that will
6 hear me rather than people that are putting them down on a piece
7 of paper and hoping that the FAA will see them.

8 I have flown all over Alaska during the last 40 years.
9 I've been in the Naknek (ph) MOA, I've been in the MOAs to the
10 west of the Alaska Range, I've been up all along the Tanana
11 Valley. I've only had one negative experience in a MOA. A MOA
12 for a pilot is a place where we can fly, but we have to look out
13 and I've been very, very close to a couple of F-15s in the
14 Galena area. That's the only bad experience I've had in 10
15 years flying the Susitna MOA, not a problem. So I'm not
16 concerned about those areas, I am concerned about the Fox 3 area
17 and I am concerned about expanding that. I would like very,
18 very much to have the Fox 3 area to be like the Buffalo area
19 where there are altitude restrictions. The Buffalo MOA has a
20 impact below 1,500 feet AGL. I'd like to see that moved up to
21 3,000 feet as a minimum. Just north of that there's another MOA
22 that does have the 3,000 foot restriction. I'd like to see that
23 throughout the entire Fox area and I definitely would not like
24 to see that expanded.

25 I would certainly favor the expansion of the restricted

20 So if there's any changes going to be made in these
21 expansions certainly make them so that the FAA rules for, you
22 know, picking your flight altitude above the ground is
23 consistent with the altitudes used in the MOAs. Thank you.

7 COLONEL WEISS: Mr. Orville Gilman, III.

8 MR. GILMAN: My name's Orville Gilman. I live in Wasilla.

9 And I read this document previously on the internet some, it's
10 large, and coming here tonight I appreciate the fact now that
11 it's actually an Environmental Impact Statement and I have the
12 same concerns as other people. I don't want to get locked out
13 of areas we've hunted in for years. I think that as a whole the
14 military needs these training operations, but I also feel that
15 as opposed to locking them out -- I mean personally I think that
16 it'd be safer -- in the issue of live range fires certainly you
17 don't want anybody in there. In other instances I think working
18 among the citizen population say during the hunting season would
19 be more of an opportunity than a hindrance because in
20 Afghanistan and Iraq right now we're definitely working right
21 through civilians. It just makes sense that for good real world
22 training that there's really no need to remove the public from
23 everywhere.

24 And as far as the environmental impact goes, I -- in all
25 the years I've lived here since '68, since I was seven years

[REDACTED]

I0084

1 old, and I -- I've never really seen that the military's impact
2 on wildlife game populations was any more or less than any other
3 person or group traveling through the country. So I don't hold
4 that as something that I fear as a problem.

5 I just am more concerned with it seems like every time we
6 have an impact statement, an agreement for something to happen
7 in a certain specific way, a few years later it tends to be that
8 the federal agency or the state agency starts to take total
9 control and it doesn't turn out to be the thing that it started
10 out as. And that's what I'd like to see avoided here, I'd like
11 to see it -- that the military can train, they can operate in
12 the state and that we can all still hunt and fish and enjoy our
13 rights as citizens. Because the bottom line is this is America
14 and each and every one of us is an American and this is our
15 government, not a government above us, but a government of us.
16 It's our decision and I think we can make a reasonable and wise
17 decision. Thank you.

I0085

| Submital ID | Commenter | Title | Organization | Comment |
|-------------|-------------|-------|--------------|--|
| I0085 | Randy Tyler | | | <p>As a general aviation user of this air space I am especially concerned about the expansion of the FOX3 MOA in. This is in the middle of the most heavily used GA portion of the state, directly in the middle of the main population centers of the state. To expand into more of this area and to go to such low AGL floors will place the military traffic directly in with the GA traffic. This is not good. I fully support the military but this is an action that is akin to being the 800 pound gorilla in the room. I respectfully request that the military truly respect the other users of this airspace and not just use the EIS process to check the required boxes and ram this through. I have a small, slow tube and fabric GA airplane with no transponder; something very common in Alaska. I know from experience that Anchorage Tower has a difficult time identifying me on radar when I transition the terminal area. It will be nearly impossible for a military pilot to see and avoid me while traveling at 450+ knots at very low level and fully focused on terrain avoidance and their training target. I highly doubt that AWACS could positively identify me 100% either. This situation is just a disaster in the making. Not only would I and fellow GA pilots and passengers be dead from collisions or near miss turbulence, there is real possibility that the military traffic could be lost as well. The main thing is that this is not necessary. There are many other more remote MOA's in Alaska the military can expand with much less impact to the public and with the speed of modern military aircraft, the time to location is insignificant. For these reasons I respectfully request that the expansion of the FOX3 MOA and the new Paxon MOA not be done and the necessary expansion of MOA's be done in more remote areas of the state with less conflicting GA traffic use. The proposed Realistic Live Ordnance Delivery area is proposed to expand south and west into popular hunting and recreational use area with private cabins. It would be better and less impact if this was kept more within the limits of the Tanana flats and not encroach into the foothills of the Alaska Range mountains on the south side of the Tanana flats. The Unmanned Aerial Vehicle area is a growing concern and with this expanded area will be a real concern for GA traffic in the Fairbanks area. Again, I think this is an unnecessary risk the Military is placing on the general public and the UAV use needs to be kept within the Tanana Flats area or more remote MOA's rather than placing them in airspace most heavily used by GA traffic. I thank you for your solicitation of public comments and respectfully request that you consider these changes for the safety of the public and military alike. Thank you, Randy Tyler</p> |

I0086

May 29, 2012

Good day,

A sad picture:
This is our second letter opposing the expansion of the Fox and Paxon military Operations (MOAS). Lowering the Fox 3 MOA to 500 feet, to us, is unacceptable. This is our home. Wildlife will suffer. Civil aviation will be impacted. I and my husband picture ourselves working in our subsistence garden and having military flyovers at low levels. Our Alaskan Traditional lifestyle becomes more difficult daily it seems. We have something wonderful and special in Alaska, please help us to retain this gift. Alternative D proposing to keep the boundaries as they currently exist. Please do not expand the military exercises over the Copper River Basin.

Sincerely,

Linda Rutledge

Comment(s):

WE HAVE A RETIREMENT HOME ON A REMOTE LAKE IN THE EXPANSION AREA FOR 3 MOA. WE HAVE SPENT A GOOD DEAL OF TIME & MONEY BUILDING THIS HOME. WE ARE THERE BECAUSE IT IS REMOTE AND WE ENJOY QUIETNESS.

THESE ARE OUR CONCERNS.

1.) NOISE POLLUTION

2.) WATER POLLUTION.

A) THE LAKE IS AN ONLY SOURCE OF WATER.

3.) AIR SPACE

A) WE ARE AT THE WHIM OF THE WEATHER & FLY WHEN WE CAN. THE 500 FT AGL RESTRICTION COULD BE TROUBLESOME & DANGEROUS.

4.) THIS EXPANSION HAS MOVED INTO A MORE POPULATED AREA. LAKE HOUSE HAS ABOUT 60 PERMANENT RESIDENTS AND MORE PERMANENT PLACES ARE BEING BUILT. THIS EXPANSION HAS GONE IN THE WRONG DIRECTION. WITH A GREATER POPULATION, THE CHANCES OF PEOPLE GETTING ILL OR INJURED INCREASES. HOW WILL MEDICALS BE WORKED OUT?

5.) THERE'S MOA'S ALL OVER THE STATE & THE YUKON MOA LOOKS VERY LARGE. HOW MUCH SPACE DO YOU NEED? I BET THERE IS MORE MOA SPACE HERE THAN ANY OTHER STATE. I FEEL THE FUEL SAVINGS IS A MUTE POINT.

IN CONCLUSION, WE FEEL THE FOX 3 & PAXSON EXPANSION SHOULD NOT HAPPEN. IT WOULD INTRUDE ON OUR CHOSEN LIFE STYLE AND COULD CAUSE ECONOMIC DEPRESSION TO BUSINESSES AND DECREASE PROPERTY VALUES.

Use additional sheets as needed.

Please turn in this form at a public hearing or submit by June 7, 2012, to:
ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, IBER, AK 99506

To: ALCOM J08 Admin Box
Subject: JPARC

To Alaska Command Public Affairs Officials/Agents,

I have reviewed the JPARC Modernization and Enhancement Draft EIS. This missive is my response and public comment to the document and proposal.

I am completely dismayed at the military's proposal, JPARC Modernization and Enhancement Draft EIS, and it's lack of consideration for Alaskan people, Alaskan environment, national economics, and resources conservation.

This document is the most publicly and personally offensive plan proposed because of its disregard for REAL people with REAL lives, who live in Alaska and would be subject to non-stop noise pollution, aerial interference, reduced quality of life, and the increased safety risk on land and air. The proposed idea to increase training exercises does not justify the cost to all Alaskans.

The only choice suitably presented in the JPARC draft is "No Action Alternative" on every document proposal. Do not add to or increase the military training that already exists in Alaska.

Sincerely,
Susan Monetti

JBER, Alaska 99506

alcom.i08@elmendorf.af.mil

Subject: Joint Pacific Alaska Range Complex

To whom it may concern:

To start this letter, let me be clear, that we do not oppose military training in Alaska.

The expansion of the FOX 3 and Paxson MOAs is totally unacceptable.

We are full time residents of Lake Louise. Both I and my wife are retired, but very active in the public and community. We are both Mat-Su Borough Emergency Medical Responders, my wife is president of the Lake Louise Community Non-Profit Corporation, and I am the Chief of the Lake Louise Volunteer Fire Dept.

The Lake Louise Community comprises of the 3 major area lakes, Lake Louise, Lake Susitna, and Tyone Lake, as well as the surrounding small lakes and land areas. This is a state recreation area and home to about 60 year around residents. People have chosen this area because of its natural beauty, clean waters, abundant wildlife, and road access.

The expansion of the MOAs over populated areas makes absolutely no sense. I understand that to someone sitting in the Pentagon, looking at a map, it looks like a vast wilderness. This is the recreation area for the largest population center in Alaska. This is the most accessible hunting area. This is Alaska's outdoor backyard. We have already experienced some out of area military air traffic that has strayed out of the existing MOA. This unplanned preview has not been a pleasant experience. We can only imagine the accidental air traffic if the MOAs are expanded.

Alaska is a huge area, most of which is under Federal management. To pick an area that is mostly State of Alaska, and Mat-Su Borough lands are unacceptable. Use the vast Federal lands including the National Parks for MOA expansion. We have listened to all of the reasons presented by the various public meetings; none of these make a justifiable case: fuel savings, proximity to airfields, terrain similar to the current war areas.

Respectfully,

Corwin and Beverly Matthews

From: John Strassenburgh [REDACTED]
Sent: Thursday, May 31, 2012 5:46 PM
To: ALCOM J08 Admin Box
Subject: Public comment JPARC draft EIS

BELOW ARE MY COMMENTS. PLEASE ACKNOWLEDGE THAT YOU HAVE RECEIVED THEM IN GOOD ORDER.
THANK YOU.

May 30, 2012

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506

Via email: alcom.i08@elmendorf.af.mil

To Whom It May Concern:

These are my comments regarding the Draft EIS of the proposed expansion of the Joint Pacific Alaska Range Complex (JPARC) military training area.

I support the NO ACTION alternative, which would keep the existing training areas and regimen in place. Alternative E is a smaller expansion and so would be marginally less detrimental to fish and wildlife and human use and enjoyment of the affected lands than would be Alternative A, but I do not support either of these action alternatives. Both would have an unacceptable level of adverse effect on the health and abundance of wildlife populations, on the Alaska Department of Fish and Game's ability to conduct research and manage fish and wildlife, and the public's use and enjoyment of the area. Both also represent concern with respect to aviation safety.

I am concerned also because the military is fundamentally turning a blind eye to the serious and legitimate impacts of its proposed expansion and modernization. I note that just over a year has passed since the public commented in the scoping phase of this proposal and now. That is not nearly enough time to comprehensively and meaningfully do the research and analysis and otherwise assess the effects on wildlife, the environment, and human use of the areas, so that the proposal can be modified and mitigating measures established accordingly.

Impact mitigation is more than just notifying the public of when and where training exercises will take place. To develop mitigating measures means first knowing what the effect of the training exercises would be, and where. Then it is necessary for the military to actively work with ADF&G and citizen groups at the front end, before the final EIS and Record of Decision, to redesign the proposal and develop specific mitigation measures necessary to avoid impacts or reduce the impacts to an acceptable level. For example, how, specifically, will the caribou calving, Dall Sheep lambing, nesting birds, etc. be impacted and how will they be protected?

The MOAs (especially FOX 3) overlay very productive wildlife areas, including calving grounds for the Nelchina caribou herd and the Nelchina Public Use Area. The areas are very popular with the public for a variety of uses. It is not just about hunting and fishing. Folks enjoy the outdoors and they get out there for many

I0090

reasons... often to find a little quiet solitude. There is flightseeing, mining, trekking, subsistence, lodges, guiding, remote cabins, birding, mountain climbing, agency fixed wing and rotary aircraft (e.g., ADF&G doing research), and so on.

The military is proposing to significantly expand and intensify its training operations. According to information from the Talkeetna meeting on May 22, 2011, there would be training sessions, one in the morning and one in the afternoon, on weekdays. And the military aircraft would be flying as low as 500 feet above ground level (AGL). This is very frequent, repeated, low-level, intense flying. Obviously, this kind of activity would disturb and displace wildlife. The wildlife would be less successful because of the direct disturbance, but also because they would move away, to less productive habitat. Both Action Alternatives, A and E, would clearly put the health and numbers of wildlife populations at risk.

And it not just mammals. Migratory birds would be disturbed during the critical time of nesting and rearing, and preparing for fall migration. The frequency and intensity of the low-level flying (i.e., less than 5000 feet AGL) represent a significant disturbance that would be detrimental to the nesting success rates.

On top of that are the impacts on human use and enjoyment of the area, including public safety concerns associated with private and commercial small aircraft flying. There would be more air traffic and a mixture of military and civilian aircraft, which would increase the chances of mid-air collisions. And there is the direct impairment of human on-the-ground activities, whether it be a backpacker seeking a wilderness experience (a large part of which is a natural soundscape), a hunter faced with less game, or a family camping along the Denali Highway seeking respite from city life.

The Matanuska-Susitna Valley is one of the fastest (if not the fastest) growing areas in the state. That means more people, more remote cabins, more hunting and fishing, more trekking, more mountain climbing, trekking, more flight seeing, more charter flights, and so on.... all of which increases the severity of the JPARC impacts, but also in themselves create pressure on wildlife. The EIS should analyze the effect of the Alternatives in the context of the increase in population and human use of the area, which will, by all accounts, occur. In addition, population increase is foreseeable, and its effect should be analyzed as part of the Cumulative Impacts section of the EIS.

Many of the impacts of the proposed expansion and intensification of the JPARC training area can be significantly reduced or eliminated altogether if the minimum AGL remained at 5000 feet. If I were to make one recommendation, it would be to add a zero to the proposed 500 feet AGL to keep the minimum AGL at 5000 feet.

Thank you for considering my comments.

Sincerely,

John Strassenburgh

I0091

May 24, 2012

These comments are submitted in response to the Environmental Impact Statement for the Modernization and Enhancement of Ranges, Airspace, and Training Areas in the Joint Pacific Alaska Range Complex in Alaska.

Comments submitted by Robert Gerlach, 39 year resident of Talkeetna, Alaska, private pilot, guide, hunter, recreationalist, concerned citizen and property owner relatively near the proposed Fox 3 MOA expansion area.

As a private citizen actively utilizing not only ground but also air space affected by this proposal, I have great concerns for the proposed military expansions made in this request.

Before I extend my comments specific to the request, I am compelled to voice a few issues with the 'public comment process' I am participating in.

1. It is somewhat outrageous to me that we cannot *easily* decipher "who" is making this request. From the Joint Pacific Alaska Range Complex EIS website, it is not at all clear WHO is not only asking for the expanded military use of our State's air, land and water, but worse, WHO is governing this decision. Digging deeper, we find the EIS report states reference to broad federal agencies involved, but honestly, it is still not clear or forthright for us to clearly understand WHO is actually involved, both on the request side and the decision side of this proposal. In my opinion that leans toward feeling more like this is done and out of our hands, and as such, a sign for how much this whole proposal reaches over the line.
2. Controlling the Public Comment Process. I am writing in response to an exhaustive document that the public has had very little time to understand. I can only imagine the extent of the professional team who created this document, and the exhaustive amount of time they took doing so, yet we as the public are given just 70 days, to not only just read it, but to digest, understand and decipher: what is being proposed, who is proposing it, what are the impacts said proposal will have on the lives, natural resources, communities, economies, fish and game, lifestyles and much more, for the public residing within the affected areas. And, we are expected to decide if the proposal seems feasible to allow. This is FAR too much. I am not even completely certain who I am addressing, precisely who the entities involved are, nor who is deciding the outcome, let alone clear about all the implications this proposal has upon my life and the lives of my fellow Alaskans. And still, I am required to decipher what is reasonable. I can say, THIS in itself is unreasonable.
3. Conflict of Interest. The Public Hearing held in Talkeetna, Alaska, March 22, 2012, was moderated by a military judge, who allowed only four minutes per person to submit public comment. **With all the military personnel hovering about, I was too intimidated to do verbal comments. It felt like an occupying force had taken over.** THAT was unreasonable. Is it not an obvious conflict of interest to utilize military personnel (even uninvolved-to-this-request-military) as

I0091

gatekeepers when collecting data on a project that aims to benefit the military? This meeting was a clear example of ‘the powers that be’ following ‘the letter of the law’ without following the ‘spirit of the law’ in adhering to the requirement to allow public involvement. Sincere interest for including public input would provide EASE and COMFORT in collecting public input. The process I have experienced has seemed more like an effort to control the public comment process, and ultimately limit the “obstacle” of the public, as opposed to actually encouraging public involvement in deciphering what is truly within the best interests of all parties involved while determining the true impacts of this proposal.

Now, despite my displeasure with the process and the uncertainty for exactly who is involved, I DO have some very clear concerns that I am very certain must be expressed with regard to this request for expanded military use of Alaska’s land, air and water spaces.

We Alaskans who live, work and recreate in the areas listed in this proposal are being encroached upon by the military. This place is our home. With the proposed areas listed in this expansion, it feels as if we are being literally squeezed out of our own backyards.

With all due respect, I recognize the military needs space to train and conduct its exercises, and it needs to do so in areas where civilians will not be affected. Yet therein lies the problem. The proposed areas ARE occupied and heavily utilized by the public. The military has taken a lot of space from Alaskans already, and it is my concern that this request is going well over the line.

About 15 years ago, the military came through our State with a similar EIS process, and at that time, they established a wide range of Military Operations Areas. The Fairbanks area and northeast of there is almost continuously air space dedicated to military operations. They have a low level ops area, a high level ops area, live-fire areas and restricted areas. I provide below a list of all the Restricted Areas, Military Operations Areas, and Area refueling tracks for air space alone that are already in use across our State, by the military. There are probably more military use areas that I am not aware of, not even to mention the numerous military bases that occupy our State.

Restricted Area 2203 A
Restricted Area 2203 C
Restricted Area 2211
Restricted Area 2202

Susitna
Naknek 1
Naknek 2
Sparrevohn
Stoney A
Stoney B

I0091

Galena
Utopia
Fox 1
Fox 2
Fox 3
Eielson
Birch
Delta Junction
Buffalo
Viper
Yukon 1
Yukon 2
Yukon 3 High
Yukon 3A Low
Yukon 3B
Yukon 4
Yukon 5
Sand Point

In the time since the military's last request roughly 15 years ago when they claimed a good portion of our space then, the population of Alaska has grown considerably. Civilian use of our air and ground space has significantly increased, not decreased. We don't have less public use of our land and air space, we have considerably more.

My concern is that air space already taken by the military (noted above), combined with a considerable increase in civilian population, says we do not have more space to give the military, we have less. The military has already taken enough. As stated in the EIS report itself, the military already occupies 65,000 square miles of our Alaska air space (not to mention additional land and water space already occupied by the military). It is entirely unacceptable to increase these amounts, now.

Though the military may be trying to make it very easy on themselves, to have areas closer to their bases to avoid travel to war game practice locations, such convenience for the military creates far too much additional limitation on the public populations that live, work and recreate in these areas.

The military has taken enough of our space. Asking for more is too much.

BIG CONCERN – Fox 3 and Paxson:

I am extremely concerned with the requested expansion and changes for the Fox 3 MOA and the Paxson MOA addition. Expansion with these two areas are completely out of the question and entirely unacceptable for expanded military use.

These two areas are the bread basket of Alaskan recreation.

I0091

The military may think these areas are perfectly remote for their use. Well they ARE remote, and as such, they are PRIME locations where MANY Alaskans utilize the space – both ground AND air. It is entirely unacceptable for the military to expand there. Alaskans utilize these areas extensively all year long – skiers, snow machiners, hunters, recreational boaters – not to mention the wildlife abundance and the negative impacts any military involvement would bring to the natural resources in those pristine areas.

The Paxon and Fox 3 areas are simply too close to human populations AND they are the cream of the crop for Alaskans utilizing the outdoors. Military use in these areas is entirely unacceptable. There should be NO expansion or changes to altitudes in these areas.

Flying levels.

This proposal has also asked for an extension of air space reaching to 500 AGL (above ground level) flying. This is entirely unacceptable in the Paxon and Fox 3 areas. Have you been on the ground and experienced the noise that comes with military fly overs? In NO WAY is it appropriate or acceptable to allow flying lower than 3000 AGL in ANY of the areas requested – especially not the Fox 3 and Paxon areas – in order to maintain the health and safety of the public, and protect the wild habitats that dwell in these places.

It is with grave concern for the maintenance of our public areas that I present these comments. I cannot stand by and watch our military encroach upon our lands any further than they already have. The requests made within this proposal are simply unacceptable.

I am calling for the NO ACTION ALTERNATIVE for the requests made in this proposal.

Thank you for your time and consideration.

Sincerely,

Robert Gerlach

I0092

To Whom It May Concern:

Since both my parents were in the Air Force, I am always interested in what the military has to say, particularly when it perceives it has needs. However, looking at the maps of the proposed JPARC enhancements raises some serious red flags for me:

1. IT WILL BECOME AN AREA TOO LARGE TO MANAGE

I live where we shouldn't be hearing sonic booms, but do, and that makes me concerned that enlarging the MOA will lead to it being too large to supervise adequately. These booms startle me; I've thought 'Earthquake!' until my husband, who grew up around Beale Air Force Base, recognized it as a sonic boom. I was glad to find out about 1-800-JET-NOIS at our local scoping meeting in Glennallen, but if there are enough problems at the present size to need such a number, it will be impossible to manage an even larger area.

2. WILDLIFE

-DURING MATING & BIRTHING SEASONS

If a boom causes me to startle, it will do the same for wildlife. I'm sure there are studies that show both negative and no effects, but my experience indicates it would alarm wildlife. A scene I can imagine is a bird flying off the nest frequently during a training exercise, causing the eggs to cool down so much that they don't hatch. Repeated, this would be disastrous, and since it could affect other wildlife, it will have to be studied for each species, both during mating and birthing seasons.

Much of the area proposed to be included is pristine wilderness. To disturb it would just be wrong, as well as disastrous and very difficult to make right.

-MOOSE IN SPRING

I also worry about moose in the spring when they are weakened from a hard winter with stressors like a lack of food and deep snow. They are just hanging on then, and running a few times from startling noises could be enough to kill them.

3. QUALITY OF LIFE:

-NUISANCE NOISE

-REDUCED PROPERTY VALUES

-PROPERTY DAMAGE

There are rules in the Lower 48 and other countries severely limiting sonic booms because they are so annoying. They lower property values and can cause damage to buildings, as is to be expected from a noise that rattles a house like an earthquake. I object to that happening to my home, and it is especially worrisome that there is a request to lower the flying level to 500 feet, unheard of anywhere else.

4. INCONSISTENT WITH NATIONAL PARK & PRESERVE VALUES

I0092

The proposed expansion is between two national parks, and according to the handout, appears to be less than 10 miles from Wrangell-St. Elias. If I am being affected now, the enhancements will surely cause the sound and over-flights to slop over into the parks. The kind of noise and activity that will accompany this extension is antithetical to the preservation of wilderness.

5. AVALANCHES

If snow machines or even skiers can start avalanches, sonic booms certainly could, too, sending them roaring down on unsuspecting backcountry recreationalists. I may be a grandma, but I try to get to the mountains to ski a few times every year.

6. LACK OF PERTINENT STUDIES

How far do sonic booms go in cold? Is that why we heard several recently? Do sonic booms bounce off mountains? There are probably no studies that will allow anyone to say what the true effects of sonic booms are in extreme cold or near high mountains.

7. ECONOMIC DETRIMENTS

Potential economic benefits would likely be at the expense of some existing businesses.

-PRIVATE PILOTS

A larger MOA means the chance for more restrictions for private pilots, who are often the lifeline to remote areas. They have worked hard in rough conditions to develop small businesses, and the possibility of new jobs for someone else does not make negative impacts to their established income and life style any less onerous.

-TOURISM

Why should tourists come all the way to Alaska and its rugged weather, when they can take a shorter, less expensive trip to see beautiful scenery if the Alaskan experience is going to include noise and Army, Navy, Marine Corps, and Air Force activity?

I do love the sight of jets. I pay attention hoping to catch sight of them when I go by Eielson AFB—where I did CAP camp during high school—on my way to visit family in Fairbanks. That's where my mother homesteaded in the late '40s while working at Ladd AFB and where she met my father, a WWII pilot stationed there. I appreciate the military and understand that Alaska might seem wide open and under populated, just the kind of place for this increase. But I feel that with all the potential negatives at the same time there are 65,000 square miles in the present JPARC, the military needs to stay within the already generous space it has to use in Alaska.

Thank you,
Felicia Riedel

JPER, Alaska 99506

Dear Sir,

We would like to make written comment on the proposals submitted in the JPARC Modernization and Enhancement Environmental Impact Statement. After review of the executive summary draft study and attending two of the public meetings, let's hope the process with this EIS Study will once again show the military does listen to the public's important concerns of the Lake Louise Area as they did in 1996.

We did notice that the Alternative A to Alternative E Proposal in this draft study is exactly the same "mitigation proposal" that was proposed in 1995. This draft study has not come up with anything new, except to try and throw in an old "mitigation proposal" from 1995. But that ended with the military taking the No Alternative Proposal because of their findings of the impacts to the Lake Louise Area in the Final EIS Study of 1996.

This Alternative E has moved the southern boundary of the proposed expansion 20 miles to the North. The proposed boundary now intersects the North end of Susitna Lake. Clearly, Alternative E does not take into consideration the entire lakes systems. All the proposals within Alternative E still stand from last year preliminary proposals (2011): Lower the flight deck from the existing 5,000 feet to 500 feet AGL, extend night flying hours and increase noise level from 35 to 50dB.

It is clearly defined in the six "significant adverse impacts" to the Fox 3 MOA Expansion Area. These are airspace management and use, noise, safety-flight, land use-land management and use, land use-recreation and socioeconomics. These six "significant adverse impacts" make it no more reasonable today as back in 1995. Thus the Lake Louise Area has met the NEPA implementing regulations criteria to be eliminated from any of the military's proposals.

In talking with the military at the last public hearing, they appear to be receptive to civilian concerns and they mentioned an Over Flight Avoidance Area. Our suggested additional proposed area would be an area, twenty (20) miles north and parallel to the southern border of Alternative E. The flight altitude would be restricted to the existing altitude of 5,000 feet AGL for high speed aircraft. As long as this proposal is added to Alternative E and maintained year round. It appears from the discussion with the military at the hearing, an Over Flight Avoidance Area has no draw backs in the future from my understanding? A clarification to the public would be appropriate before any final decision of the study is made if this option is considered. Otherwise, the other option is: Alternative E but all of the lake systems area should be excluded, further the boundary north and the No Action Alternative should be taken on all proposals within Alternative E.

I0093

It is complicated because of the ramifications of this draft summary. The military saw Lake Louise, as a wonderful recreational area back in the 1950's for their personnel. There has to be a compromise with the stakeholders here, what is necessary for the military and Alaskan's outdoor recreational needs.

Thank you for the opportunity to make comment on this important issue for the Lake Louise Area.

Sincerely,

Harry and Jean Holt

e Point
Lodge | | 1. - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | I am very much in support of alternate E for the proposed Fox 3 Operation Area (MOA). I appreciate that earlier comments from the Lake Louise area were heard and considered. Many of those earlier comments stated concerns about Lake Louise and I believe most of those commenters consider Sustina and Tyone Lakes to be part of the Lake Louise Area. It seems unfair to not to include these lakes in the proposed alternate E as all 3 lake are part of the Lake Louise community. Please consider a higher floor over these lakes to 5000' or extend the alternate E boundary the few miles to include Sustina and Tyone Lakes. |

| 10096 | Mary Corcoran | | | General (to the EIS), Mitigations, Airspace Management, Noise, Safety (Airspace), Safety (Ground), Water Resources, HAZMAT, Biological Resources, Land Use, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 - Battle Area Complex Restricted Area Addition, 11 - Missile Live Fire for AIM-9 and AIM-120 in the Gulf of Alaska | <p>General comments: I appreciate this opportunity to comment on the JPARC Draft EIS. I am opposed to increasing JPARC particularly in the Fox MOA expansion, Paxon MOA Addition, ICAI Areas to such a large extent both in terms of area and activities. While the subject of the EIS may be convenient for the military, the variety of uses, geographic areas, communities still presents a huge challenge to those who wish to comprehend all proposed changes and comment constructively. I am very concerned for taxpayers about the consequences with this development. The mitigation measures that suggest to "pursue funding" offer no certainty or serious follow-through. To finance this venture, "borrows" from somewhere else. To weigh in fully, we need to have those sources identified. The proposal imposes too many restrictions on traditional uses of public and private lands. I am concerned that levels of activity will increase over these areas in another short time period, with little need for review of the new impacts. Even though Alaska has the appearance of vast expanses of empty land, further expansion of training facilities would displace others.</p> <p>This land and airspace is already used by miners, prospectors, outdoors enthusiasts of many interests, aviators of all capacities, etc. Expansion would restrict public use, current and future and has the appearance of a land grab. The Gulf of Alaska waters are contain a food source that cannot be duplicated and is a relatively unpolluted environment. If training could be done without harm to ecosystems that are necessary to the livelihood of Alaskans or in the ecosystems that we depend on, I would have no objections. Disturbance to sea creatures, pollution from explosives and exploded target drones would result to harm to this area. Unexploded ordinance would be a threat for future users. Making better use of the current training areas and not expanding is really the best real time solution for military training needs. Doing more with existing training areas makes the most sense.</p> <p>Environmental Resource Areas 1. Airspace Operations • Airspace: It appears to me that there are corridors selected and flight levels proposed that will impede private and commercial traffic traditionally using/routed along highways, rivers and access to hunting grounds. Enhanced mitigation regarding publicity should include PSA's on local radio stations and community websites like www.deltanewb.com</p> |

10096

• Noise: Existing training in DTA and BAX has increased markedly over the last few years both in terms of volume, frequency and at all hours of the day. I can hear machine gunfire, bombing and sonic booms from my house. I have large low flying aircraft flying directly over my house. Why not move operations that resemble a warzone to training areas that are not within a couple of miles of residential areas? Supersonic operations continue to be more than an annoyance in populated areas. Mitigation suggests studying effects on animals, but not people who live close to these ranges. Some areas should also restrict MFE's during sheep season (mid August...) Flight levels down to 500 ft. could easily have an adverse effect on a hunt. • Safety (Ground and Air): When training occurs in proximity to residential areas, any accident has the potential to claim more loss. AK citizens are not collateral. 2. Natural Resources • Water: Increased live fire in PWS could pose additional hazards in terms of pollution and safety. Paxson and Fox 3 include at least a half dozen bodies of water that are used regularly by residents and recreators. Mitigation sounds like those citizens will need to schedule their activities on public and private land around training schedules. • Biological: How realistic is it to propose that natural resources (who/what are these? What agency/personnel?) and range managers coordinate training schedules that are not dictated by animals on the move but personnel in an off-site office? Some of the mitigation suggestions name specifically ADFG others do not. Who is responsible for what needs to be firm. 4. Human Resources • Land Use: Paxson and Fox 3 expansion restricts use by residents, recreators and cabin owners. USARAK website is not user friendly for civilians searching for access. For example, maps with range names mean nothing to the civilian who wants to know on a weekend whether an area is open or not. • Recreation and Visual Resources: The extensive target of this proposal has tremendous effect on residents, tourists, hunters, hikers, dog mushers, snowmachiners, in particular #1 Paxson and Fox 3. These areas are used year round by many. 5. Community Infrastructure • Hazardous Materials: The Military does not have an admirable record of keeping track of hazardous substances/ordnance in AK. Introducing more to areas that are so close to the Delta Junction community is disturbing in terms of fire fighting, pollution and future use.

|--------------|--------------|-------|--------------|---|--|
| 10097 | Jean Hartman | | | General (to the EIS), Noise, Biological Resources, Land Use, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 5 - Night Joint Training | <p>I am a resident of the Trapper Creek area and live under the Susitna MOA. I am also a frequent user of the Fox 3 area along the Denali Highway. I am concerned with the Fox 3 expansion and also with the Night Joint Training issue. Night Joint Training: I live under the Susitna MOA and am quite familiar with the noise from overhead practice flights. At times the noise is extremely annoying making it impossible to carry on a conversation or hear the radio. I would definitely not want to hear this noise at night when I am trying to sleep! I understand that this is proposed because of daylight savings time starting and ending so early. It seems a better solution would be to go back to the old dates of daylight savings time. Really, it is annoying to start daylight savings time so early not to mention that daylight savings time in Alaska is totally pointless. Perhaps if congress understood that the current daylight savings time interfered with military training they would be willing to change it. Additionally, I would recommend that the Air Force familiarize itself with the settlement areas under the various MOAs. I live in the Trapper Creek Glen subdivision which is a state land disposal of about 235 lots. Not all lots are developed, but there are a lot of people out here to be annoyed by flying when they are trying to sleep. Fox 3 Expansion: I am a frequent user of the area along the Denali Highway for backpacking, fishing and boating. My husband also uses the area for hunting. I am particularly concerned with the impacts of low altitude training flights in this area. Living under the Susitna MOA, I am familiar with the noise level from planes that are so high that they can't be seen. Frequently the noise makes having a conversation impossible. I can't imagine how loud the noise would be from planes flying at low altitudes. I really don't ever want to have to hear it. The Denali Highway area is an area used for a lot of recreational activities. When people come out to their weekend cabins in my area, they always comment on how quiet it is. I think the quiet is one of the things that people go out into the wilds to enjoy. I think the noise from low altitude flights would totally ruin their experience. This area is one of the few areas easily accessible by road for the average Alaskan or tourist. It is as scenic as Denali Park and offers a lot of diverse recreational activities. I think that the ability of people to enjoy the area should be preserved and that low altitude training would be totally unacceptable in this area.</p> |

10097

I am also concerned with the impact of low altitude training flights on the wildlife. I once had a military jet fly low over my barn. It totally scared my animals. A lot of people depend on the caribou herd in the Fox 3 area. It would be a disaster if the herd decided to move to get away from the low flights. It would seem that it could also have serious negative impacts at calving time. The same would be true for other wildlife in the area. I am also concerned with the proposed Paxson MOA addition. The area along the Denali Highway (Tangle Lakes) and along the Richardson Highway also see a lot of recreational use. Again, it is an area easily accessible for a lot of people. I think that it is important to reserve some areas where people can enjoy the wilds without a bunch of annoying, loud aircraft overhead. There is already too much noise from small planes in the area. Perhaps the far eastern edge of this area could be used without disrupting too many people's experience. Thank you for this opportunity to comment. Jean Hartman

|--------------|-------------|-------|--------------|--|---|
| 10098 | peter stern | | | General (to the EIS), Purpose/Need, Cumulative Impacts, Airspace Management, Noise, Safety (Airspace), Safety (Ground), Land Use, Infrastructure and Transportation, Socioeconomics, Air Quality, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 2 - Realistic Live Ordnance Delivery, 5 - Night Joint Training, 6 - Unmanned Aerial Vehicle (UAV) Access | <p>The military in Alaska seems to be on course to try to tie up large areas of air space and land for training purposes. In the case of the proposals to increase FOX 3 MOA and create the Paxson MOA, these areas are accessible to civilians by road as well as general aviation aircraft. They contain some of the most beautiful road accessible wilderness in interior Alaska. There are also areas that support a large number of hunters. Creating large longitudinal training corridors with access from multiple directions may be important, but should not be allowed in this area of the state. The Air Force is trying to move its' last fighter squadron out of Fairbanks so proximity to Fairbanks should not be considered a valid justification. Page 259 Vol 1 paragraphs 3 and 4 describe the quiet and naturalness people seek in going into this country. Page 265 Vol 1 paragraphs 5 & 6 cover the impact of low level high speed operations on people in the area. The EIS proposes to lower the FOX 3 MOA air space to 500 ft AGL and use the same restriction in the Paxson MOA. This is far too low and would seriously impact civilians trying to enjoy this wilderness. The Air Force is trying to transfer the last F-16 squadrons out of Eielson and move them to Elmendorf. This plan undermines the argument that proximity to Fairbanks is important. Dropping thousands of pounds of chaff in the area is written off as having little impact. There is no mention of the biodegradable status of the chaff. Long hours of operation and 240 days a year of exercises mean the area will be heavily used for both low and high level training. The EIS acknowledges more civilian and commercial aircraft will be using GPS navigation at lower altitudes and this impact is unknown on the NEXTGEN system coverage. low level transiting of the passes through the Alaska Range by civilian and commercial aircraft should not have to mix with high speed military aircraft doing low level training. The Air Force should find other places to do low level training of F-22 and F-35 aircraft. I support the 2.1.1.2 No Action Alternative. The Live Ordnance Delivery expansion should be rejected. Live ordnance training areas are problematic locations for wildland fires started either by ordnance or lightning strikes. The EIS says very little about suppression plans for live fire impact areas beyond the military's coordination with BLM and AFS. Wildland fire smoke in Fairbanks and the interior can be substantial, both esthetically and from the health stand points.</p> |

10098

There is no discussion in the EIS about this potential problem. I support 2.2.1.2 No action alternative. Expansion of Night Ordnance Use beyond 10pm is not in the best interest of residents of interior Alaska. Residents should not have to listen to explosions or other aircraft operations after 10pm. While it may be difficult to meet the night exercise requirements, they can be met or the goals can be rewritten. I support 2.1.5.2 No Action Alternative. Airspace Corridors for UAV Access appears to be an attempt by the military to jump the gun on reserving airspace when the FAA hasn't yet released a plan for integrating UAV operations with general aviation and commercial aircraft. The proposals are significant in they want to reserve airspace from 1200' AGL to FL 180. This proposal is premature. I support 2.1.6.1.3, 2.1.6.2.3, 2.1.6.4.3, 2.1.6.5.3, 2.1.6.6.3, 2.1.7.3 No Action. The EIS and appendices are a hugely long and complex documents. The issues discussed are important. Alaska should oppose the military trying to tie up large areas of the state both for ground and air training. The answer isn't always "more is better". Once these areas become tied up as MOAs it will be very hard to get the military to release them back to general public use. Live fire impact areas will remain off limits probably for a very long time. Unless expansion is opposed, Alaska stands to lose large areas of the state that offer residents and tourists truly unique wilderness experiences both from the ground level and from aerial access.

| I0099 | Dwayne Bertholl | Mr. | | Purpose/Need, Airspace Management, Noise, Safety (Airspace), Physical Resources, Cultural Resources, Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA | <p>Thank you for the chance to comment on the proposed new Paxson MOA and expanded Fox 3 MOA. The proposed new Paxson MOA will take in hunting and fishing areas which have been used for generations by my family and my wife's family. This area was not used for military training in the past. So the new - low and loud - sounds in the MOA will disturb the wildlife in the area and start unusual behavior in the animals. This is an important calving area for moose, caribou and Dall Sheep. The expanded Fox 3 MOA is over the Nelchina Caribou breeding grounds. That herd has sustained Alaska families for generations - in addition to my family. The Nelchina Caribou herd also provides an excellent sport hunting opportunity for out-of-state military personnel in both MOA areas (which I believe should continue). I don't believe the US Air Force needs more airspace in the Fox 3 MOA. The flat terrain in the expansion area gives no new training options which do not already exist in other existing MOAs. Having spent time in the 82nd Airborne, I know - and understand - the US military has enough training areas without locking up more airspace or land for training in Alaska. The US Air Force has locked up the Naknek 1 & 2, Stony A & B, Susitna areas for MOAs. All of those MOAs are closer than the proposed Paxson MOA. So your reasoning of needing closer aircraft training areas to Elmendorf is not justifiable. And you're moving all fighter aircraft out of Fairbanks, remember? While the US Air Force provides notifications and warnings about flying in MOAs, US Air Force pilots do not feel constrained by designated and published boundaries, routes, altitudes, or times. This observation and statement is from my flying and outdoor recreation experience within the Susitna, Copper, and Tanana basins. I love and believe in our military, but the military is our spoiled child - gimme, gimme, gimme. As parents (or taxpayers and owners of public lands) we have to say no to baseless "gimme's". I say that knowing whatever Alaska residents say, nothing will change what the military is planning to do. Thank for the opportunity to comment anyway. I will read further and try to find a designated corridor within the new Paxson MOA which would allow Alaska pilots unrestricted transit between Glennallen and Delta within the new Paxson MOA. Dwayne Bertholl</p> |

I0100

THE "REALITY" OF YOUR MILITARY WORLD IS SO COMPLETELY OUT OF SYNC WITH THE NATURAL WORLD THAT — IF I COULD BE KING FOR A DAY — I WOULD SHUT DOWN YOUR WHOLE SHOOTING MATCH — FOREVER. HUMAN KIND HAS BEEN TRYING TO NEGOTIATE CONFLICTS

Comment(s): WITH YOUR METHODS FOR THOUSANDS OF YEARS.

IT AIN'T WORKING. THIS ENDLESS ESCALATION OF HUMAN AGGRESSION — ALWAYS BIGGER, BIGGER, STRONGER, FASTER — IS TOTALLY NUTSO — UNDESIRABLE — UNSUSTAINABLE. YOU WILL SUCCEED IN ELIMINATING MONOSAPIENS. WE'VE GOT TO FIND A BETTER WAY. LIKE COMPULSORY SERVICE IN THE PEACE CORPS.

BUT FOR NOW, SINCE I'M UNWILLY TO BE KING FOR A DAY.

I SAY NO — TO EXPANDING FOX 3

NO — TO THE PIGEON ADDITION.

NO — TO FLYING BELOW 5000'.

I SAY YES — TO REQUIRING YOU TO FUND INDEPENDENT STUDIES OF IMPACTS OF YOUR OPERATIONS ON WILDLIFE — ESPECIALLY IN LIVE ORDNANCE AREAS.

I SAY YES — TO PROHIBITING PUBLIC ACCESS ON MILITARY LANDS / ROADS USING MOTOR VEHICLES

I MUST COMPLEMENT THE THOROUGHNESS OF YOUR PRESENTATION IN THROBTH. BUT THE VAST VOLUME OF INFORMATION WAS PRESENTED WITH SUCH UNRESENTING INTENSITY AS TO FEEL LIKE AN ASSAULT —. LIKE A STORMBOLT COMIN' THROUGH. IT WAS OVERWHELMING. THE NUMBER OF CAMOUFLAGED MILITARY MEN IN THE SMALL SPACE WAS INTIMIDATING AS WELL. ONE ON ONE, GOOD GUYS. — BUT AS A GROUP, OUT OF TOUCH WITH THEIR EFFECT ON PEOPLE OF LIFE OUTSIDE THE MILITARY.

I FEEL CITIZENS HERE IN THE LAND OF THE FREE FEEL INTIMIDATED IN OUR OWN TOWN, ON OUR SIDE. I CAN ONLY IMAGINE HOW RURAL FARMERS IN AFGHANISTAN FEEL WHEN DRONES RING IN & TAKE OUT THEIR FAMILIES. NO WEAPON, AL QUAID A THING.

THANKS FOR LISTENIN'.

DAVE JOHNSON AGE 70.

Subject: Fw: Joint Pacific Alaska Range Complex EIS Comment Submission

Greetings,

I attended the last meeting held at the Menard Complex in Wasilla. I have some comments regarding the project as it pertains to the vicinity of Lake Louise (including Susitna and Tyone). Everyone is aware of the growing uses in the close vicinity of the lakes in this area and also the much increased use of the surrounding lands for miles in all directions.

These are my comments with alternative:

1) I saw the military proposed alternative that moved the southern boundary of the Fox 3 (MOA) expansion. In addition to that boundary move, I believe this boundary line should again be moved more northerly to totally avoid the entire lakes system. Whether you draw a line across the area from east to west or create a square or block area to remove the area all around all the lakes in the southeast part of the training area makes no difference. Let us not also forget about the lakes to the east of Lake Louise, i.e., Crosswind, Ewan, Fish and other small lakes in the immediate vicinity. It would be easy to remove the southeast block of this training area –again, my point is to have the military operations avoid the entire lakes system.

2) The meeting brought forward comments regarding an Over Flight Avoidance Area. If, for some reason, the project area is not totally removed to avoid the entire lakes system, then this Over Flight Avoidance Area should be put in place due to impacts regarding noise, land use and flight safety. For this, training flights above ground level should be a minimum of 4000 feet.

3) The next comment is for the military's proposed flight level of 500 AGL over the lakes area. This is not acceptable. At no time should the AGL be lowered to 500 feet over the entire lakes system. The noise created by the training at this low level is a huge disturbance itself to both the human population and game. This does not even include the projects proposed increase of a higher noise level from 35 to 50dB. This higher noise request is not acceptable for the entire lakes system.

I do have another comment. I believe there should be minimum 3000 AGL along all the road corridors in all the training areas. This corridor should be a minimum of one (1) mile wide – with special attention given to the Denali Highway and Richardson Highway.

Thank you for opportunity to comment,
Linda Page

Comment with regard to noise and biological resources in Fox 3 MOA

Public Comment:

As someone who recreates in the Talkeetna mountains and Denali Highway area for quiet wilderness experiences, I am opposed to a 500 foot AGL of aircraft flight in the FOX 3 MOA. To increase the minimum flight level from 5,000 feet AGL to 500 feet AGL over this huge area is unreasonable. There are many other people who use the area for many purposes which are in conflict with such low-flying, high-speed aircraft. I have experienced an overflight like this in a remote valley, and it is the antithesis of a wilderness experience. Changing the minimum AGL flight level to 3,000 feet could be acceptable.

The Draft EIS for the JPARC Modernization and Enhancement does not consider the effects of low-flying (500 feet AGL) aircraft on wildlife. As a human being, I could quickly determine that the terror of a low-level flight over a ridge just ahead of me was not actually dangerous, just terrifying and heart-stopping when it's completely unexpected. How do calving moose and caribou react? What are the effects of these flights on all kinds of wildlife? The fact that the draft EIS does not consider the impacts on wildlife in these many thousands of square miles of habitat is unacceptable.

Thank you for your consideration.

Gentlemen,

As I understand it, the plan is to close Eielson Air force base any move all aircraft to Elmendorf.

While cost reduction is an admirable effort, Is this a wise move from a strategic standpoint?

Consider all military A/C based at one location when an Earthquake hits and renders the runways inoperable and unable to launch.

I remember the damage suffered by Anchorage from an earthquake. Do we really want to trust to fate and put all our "Eggs" in one basket ?

Just a thought,

Subject: Minimum altitude proposed is too low

Dear Sir,

I am writing to you with my comments regarding the JPARC-EIS. I live in the area that you propose expanding for air space training called Fox 3 MOA and work in the same area as a health care provider.

I have huge concerns about the the overflight altitude being changed from minimum 5,000 feet above ground level (AGL) to minimum 500 feet AGL. The impact of noise on wildlife and human populations is very concerning. Not only will the noise affect where my family, friends and community members live, but also the huge number of tourists who come to our area to enjoy the peace and tranquility of rural remote areas of Alaska. My family and I hike and camp regularly in Denali State Park. Fox 3 MOA threatens these "public" lands and would make it impossible for the myself, my family and the public to enjoy time there.

The EIS does not sufficiently address the impact that the noise level would have on resident wildlife, the animals, birds, and fish. They will be impacted. There are suggestions in EIS to avoid lambing and calving areas and to study bald and golden eagle nesting areas, but these barely touch the vast number of other wildlife populations. If noise over a certain decibel level is a known stressor for humans, even with our ability to intellectually understand it, it follows that the same noise level will create significant stress for wildlife.

I am in favor of the NO ACTION alternative for Fox 3, which would leave the areas at status quo. I could agree to an expansion of the area if flying was set at NO LOWER THAN 3,000 ft but it is my understanding that all other alternatives were withdrawn that left the minimum altitude at a higher level.

Five hundred feet is too low.

Thank you for accepting my comments and for your consideration,

Sarah Kehoe

Subject: Comments on JPARC- EIS

Thank you for considering my comments regarding the JPARC- EIS.

1. I agree that the Air Force could be allowed to expand the range of area they can carry out training
2. The Air Force should NOT be allowed to lower the altitude AGL for their operations.
3. Fox 3 needs noise mitigation proposals. I believe the minimum altitude of 5000 feet AGL should be maintained for Fox 1, 2, and 3 in order to address biological, recreation, land use and subsistence problems caused by noise disturbance.
4. Only 2 weeks a year for human recreational users? Why are hunters more important than the many humans who seek quiet recreation on our public lands?
5. Funding is needed to pay for wildlife studies to provide baseline data of current wildlife populations and behaviors.

Sincerely,
Kate McKelvey

there is no reason at all to "modernize" this range. i believe this is an attempt to kill even more trees and wildlife. it would be better if you stayed on your own old turf, not look into new ones to destroy. there is too much impact from this. these training exercises should be done over afghanistan. stop destroying america. this comment is for the public record. jean public

DEPARTMENT OF DEFENSE

Department of the Air Force

Notice To Extend Public Comment Period for United States Air
Force Modernizations and Enhancement of Ranges, Airspace, and Training
Areas in the Joint Pacific Alaska Range Complex in Alaska Environmental
Impact Statement

AGENCY: The United States Air Force, DoD.

ACTION: Notification of extension of public comment period.

SUMMARY: Alaskan Command (ALCOM), on behalf of the U.S. Air Force and
U.S. Army is issuing this notice to advise the public of an extension
to the public comment period. The initial Notice of Availability
published in the Federal Register on March 30, 2012 (Vol. 77, No. 62/
Notices/19282), requested public comments no later than June 7, 2012.
ALCOM has extended the deadline for submitting public comments to July
9, 2012. All substantive comments on the Draft EIS received during the
public comment period will be considered in the preparation of the
Final EIS.

FOR FURTHER INFORMATION CONTACT: Please direct any written comments or
requests for information to Capt Tania Bryan, ALCOM Public Affairs,
9480 Pease Avenue, Suite 120, JBER, AK 99506, ph: 907-552-0876.

|--------------|------------|-------|--------------|--|--|
| I0110 | Marge Nord | | | General (to the EIS), 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Comment on Proposed Action – Expansion of Fox 3 MOA I have been a resident of Cantwell for 30+ years. As the pilot of a small aircraft I am greatly concerned about the proposed lowering of the Fox3 MOA to 500 feet and the increased traffic in the area from the diversion of Stony sortie missions to the Fox 3 MOA. A prime recreation area would be negatively impacted! The Fox 3 MOA encompasses prime recreational and wilderness area. There are only a few road systems in Alaska where private individuals have access to wilderness areas. The Fox 3 MOA overlies an area accessed by the Denali Highway as well as the Parks and Richardson Highways. The area is utilized by recreationalists, the tourist industry and hunters and fishermen. Recreation: Hikers – the general public and the NOLS (National Outdoor Leadership School). The NOLS organization has six or more groups of 10-15 students hiking through various parts of the area through the early summer to the late fall season. Their emphasis is teaching leadership through participating in a wilderness experience. Tourism – Bus tours over the Denali Highway during the summer season. Fishing – Fishing along the Denali Highway and the lakes in the area which are accessed by road, ATV or airplane. Hunting – Because of its access, the area is heavily hunted. Wildlife: Caribou, moose, bears, fox, lynx – startled by more sonic booms – the sound reverberates off the mountains when you're in a low valley -- I know it startles me every time. Birds -- many nesting swans on the numerous pothole lakes -- are disturbed by low-flying aircraft and also represent a collision hazard as do the eagles (I generally encounter an eagle on every flight). Environmental impact: Increase of emissions -- (246,313 tons CO2/yr plus the increased tonnage of chaff) -- that's significant!! GENERAL AVIATION WOULD BE GREATLY RESTRICTED IF THE 500-FOOT FLOOR WERE ESTABLISHED! a. It is often too turbulent to fly below 500 feet in a small aircraft. b. There is no guarantee that military aircraft will remain above the 500-foot floor. (1) They have no warning system to alert them from straying beyond vertical parameter. (2) In simulated battle exercises it will be difficult to maintain situational awareness. The reaction time in these high-speed maneuvers would delay recovery. (3) The altitude restrictions of the existing boundaries are violated (based on personal observations and experiences of other local pilots) so there is considerable doubt that the 500-foot floor would be observed.</p> |

I0110

| | | |
|-------|--|---|
| I0110 | | <p>c. There is more general aviation activity in the Fox 3 MOA area than is indicated by Flight Service statistics. Local pilots generally file flight plans with friends or company personnel. No alternative listed when the initial proposal was released there was an option not to include the 500-foot floor. Although many general aviation pilots objected to the lower floor, this option was deleted. Now the only option is to "check and see if the airspace is active" and avoid it. That is like saying, "I'm in your backyard so don't come out of the house". There are only a limited number of days in the summer and fall to fly. That is what keeps us going through the winter so if the weather's good I'm going flying and I hope I don't run into a fast-flying aircraft that I don't have time to avoid. I do support the military but surely there are some more remote areas where there would be less impact.</p> <p>Margie Nord

| I0112 | Matthew Cooper | | | General (to the EIS), Purpose/Need, Cumulative Impacts, Airspace Management, Safety (Airspace), Socioeconomics, 6 – Unmanned Aerial Vehicle (UAV) Access | I support military training in Alaska. However, the proposed UAV corridors (and the proposed corridors to R-2211 in particular) create and undue burden on general and commercial aviation and create a negative impact on the human environment. When active, these corridors combined with the existing restricted airspace will negatively affect all civilian air traffic southeast bound from Fairbanks. General aviation traffic will either have to take circuitous detour around the restricted airspace, leading to increased time and costs for GA pilots, or fly below 1200 feet AGL. Funneling southeast bound general aviation traffic below 1200 feet AGL will create significant safety hazards. In addition, the proposed corridors along with the proposed MOA expansions will negatively affect commercial IFR traffic. I respectfully request that greater consideration be given to the impacts of the his proposed expansion on civilian aviation in Alaska. |

| I0117 | Janelle Eklund | | | General (to the EIS), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>The EIS states that the MOA must have a floor of 500 feet AGL and at the same time says the airspace should minimize the interruption of commercial and general aviation traffic. This does not make sense. I am deeply opposed to the MOA having a floor of 500 feet AGL. It is virtually impossible to have a ceiling of 500 feet and still be safe for low flying general aviation traffic. Especially in this area where there is high small fixed wing traffic use for hunting and recreation. There are bound to be people killed even if there are scheduled use times. The military doesn't even adhere to the 5,000 foot ceiling now, as I have experienced low flying aircraft while recreating in the Tangle Lakes area. It ruins my day. This kind of flight is not only dangerous to humans but also the wildlife - migrating swans, ducks, other birds, caribou, moose, small animals. It will displace and confuse them plus change migrating patterns that are detrimental to their survival. To me the area between Paxon and Cantwell is sacred and should be treated as such. It has a majestic beauty, peace, quiet and solitude that is hard to find in our human impacted world. I go there to hunt, berry pick, canoe and enjoy the quiet, solitude, and beauty. Please do not destroy it by impacting it with low flying aircraft. In one of the meetings the information was that the 500' level has never been implemented in a real war situation but that they want to practice it now because maybe in the future they might use it. I don't think this is justification to practice a 500' ceiling and jeopardize the lives of other people and wildlife.</p> |

| I0119 | Brian Okonek | | | Mitigations, Noise, Safety (Aispace), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Dear JPARC, EIS team, Thank you for this opportunity to comment on the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Environmental Impact Statement. The area that I am most familiar with is the Fox 3 MOA (Military Operating Area) which extends from the southern side of the Alaska Range between the Parks and Richardson Highways south across the Denali Highway to the northern part of the Talkeetna Mountains. I have backpacked in remote parts of the Talkeetna Mountains for many years. Currently the military practices aircraft maneuvers between 5,000 feet above ground level (AGL) to 18,000' above mean sea level in this area. The only alternative that I find acceptable is the No Action alternative. I am totally against Alternative A for the Fox 3 and Paxon MOA's. The area is too large and the minimum altitude of 500 feet is much too low. Alternative E makes the Fox 3 MOA smaller, but it is still too big and the minimum flight altitude is also 500 feet. I am not in favor of Alternative E. The only way Alternative E could be acceptable is if the minimum altitude is raised to 5,000 feet. The noise created by aircraft flying as low as 500 AGL over this huge area will adversely affect many backcountry users. There are mountaineers climbing in the eastern Alaska Range, many types of recreation takes place along the Richardson and Denali Highways, there are many cabin owners in the Lake Louise area, backpackers hike in the Talkeetna Mountains and hunters and fishers are throughout the entire area. It is becoming increasingly more difficult to find quiet places to recreate. Hearing fighters practicing overhead diminishes wilderness values considerably. I am concerned that low level military aircraft practicing in the region will adversely affect the wildlife. There are Dall sheepplumbing in both the Alaska Range and Talkeetna Mountains and caribou calving in the northern Talkeetna Mountains (often in the region of the Oshetna River valley) in the spring, birds nesting including Trumpeter swans and other animals including moose in the region. There are numerous general aviation and air taxi flights throughout the proposed expansion of Fox 3 and Paxon MOA's. Suddenly meeting high speed, low level military planes is both disconcerting and dangerous for these pilots and their passengers. I believe that low level military training flights will be very unsafe. I am totally against Alternative A and E of expanding the Fox 3 MOA and lowering the flight level from 5,000 feet AGL to 500 feet AGL. This size of MOA with such low flight levels would be very disruptive to the activities the public already enjoys in the area and could have detrimental effects to the regions wildlife. I believe the military can come up with creative ways to train in the existing Fox 3 MOA at the existing 5,000 feet AGL to 18,000 feet above mean sea level. It is not acceptable for the military to state that the "No Action" alternative is not satisfactory. Sincerely,</p> <p>Brian Okonek</p> |

| I0122 | Charles McMahan | Chairman | Copper Basin Fish and Game Advisory Committee | Airspace Management, Safety (Airspace), 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | I am opposing lowering of the floor of the expanded Fox 3 MOA and new Paxon MOA to 500 feet from 5000 feet. I am also opposing the expansion of these areas, especially if the floor is lowered. I have flown many thousands of hours at lower levels and lower speeds in small planes for the past 40 years in this area for business and recreation and continue to do so. There are many others that fly more and some less than I do. I am certain that safety would be severely compromised if high speed fighter jets were turned loose to train in the same airspace that we routinely fly with small, slow and hard to see planes for game counts and captures, predator control, and recreational hunting and fishing. The chances of a mid-air collision would be unacceptable. Our previous comments have gone unheeded and the probable danger has been disregarded in the EIS. We should not have to comment again now for the same things we said in our previous comments the first go around, and I feel many that commented the first time may not again this time and their previous comments will not be counted. Chuck McMahan |

| I0123 | Earl Valley | Air Traffic Manager | F.A.A. | Purpose/Need, Airspace Management, All proposed actions | My personal opinion is this is a land grab. The airspace in use already is larger than the state of Florida. Larger than New England. If the needs cannot be met within this HUGE airspace, something is wrong with airspace management. There is no battle area larger than the airspace currently in use. The proposed plans would have a major impact on general aviation within the interior. Also, the USAF command has shown that their word is no good. Red Flag was promised not to conflict with hunting season. Beginning in 2010 it conflicts, when asked why or if the dates could be changed, the answer was because of other restrictions and no the dates could not be changed. If no concerned is shown for this issue, how can you be believed on other issues? |

Subject: JPARC expansion

Greetings,

I am a recreational private pilot operating out of Lake Hood Strip (Z41) and Lake Hood when on skis. I recently attended the Palmer Pancake Breakfast/FAAST meeting where the C17 guys were on the agenda to talk about midair avoidance. I was disappointed to see that the scheduled speaker was unable apparently assigned elsewhere and a substitute was called on short notice with little time for preparation. I was also disappointed to hear that the attitude of the DOD pilots is that it is not inappropriate to mix up C17s and C130s with general aviation (GA) traffic at low levels as long as we are listening to your position reports on the proper frequency. I doubt that you fear the wake turbulence of my C170B and it is unlikely that I will startle you by getting too close for comfort. You probably have me spotted or targeted on radar and a variety of other instruments before I know you are in the area. You are also travelling 2 to 3 times as fast. I would guess you could fly through me and leave a faint red mist and a shower of aluminum with scarcely a bump. My day will not end so well. Perhaps this sounds a bit melodramatic, but it illustrates a point that I believe is accurate. I do not believe DOD is an advocate for GA in Alaska. I do believe that DOD operations increase the risk of GA accidents in the vicinity of Anchorage and the Mat Su Borough. I oppose the JPARC expansion and do not want to see fast and heavy aircraft operating at low levels outside the current MOAs.

Sincerely,
Bill Burgess

The photo I am sending is one of the few that I have. This plane had just barely cleared the house. I am standing in front of my two story house, on my lawn. This perspective looks like he is high, but in fact had been very low. Sadly the camera perspective pushes the image away. This plane is one of the six that came through.

I am responding to your e mail because I am very disturbed about the consequences of JPARC restricting this areas' air space.
The last two weeks we experienced your, "Red Flag" exercise in this area. It was unbelievable the amount of sonic booms we incurred. One was executed under 5000 feet. Calling the Air Force number in Fairbanks has had no response to complain or express our concerns.
I had called FAA to express my concern with the C170's. They were flying to close to my house, and on the last day of your exercise, it had barely missed my house. I did get pictures and I was very shook up. My neighbors are higher in elevation than I am. They (airplanes) had to take evasive actions to miss their houses, but were out of room by the time he got to my house. Had his landing gear been down, I would not be writing this e mail. He was flying carelessly and in a reckless manner. I am in a residential neighborhood, and the pilots can see that.
If this is what we are in store for when you restrict the air space for training, you will have a detrimental effect and impact on this area. This will have been the second time my house has been a near miss. I fear for a third.
During training, these pilots do not take care of who they will be disturbing, or if sonic booms are way too loud and in need of having ear protection on, if on land.
If my house was almost hit, how close will you be to the pipeline and the pilot cannot divert an obstacle? They are putting themselves, as well as innocent civilians in danger with these training missions. I repeat,,it is reckless endangerment with the tactics they use.
I am forwarding this as well as the pictures to Senator Murkowski, and anyone else who will listen. I do not want to see any of your pilots crash,,and I do not want to be in their line of sight if such a tragedy should occur.

Re: Public Comment
Joint Pacific Alaska Range Complex (JPARC) Support

To Whom it May Concern,

Please register this letter to be an indication of strong support for the draft *JPARC Modernization and Enhancement Environmental Impact Statement*.

I am privileged to encourage the Department of Defense to utilize Alaska's assets needed to train America's fighting forces. Alaska offers the geography, the space, the global location, and the isolation to effectively and efficiently train for combat in near real-world situations.

As a participant in the MOA expansion in the mid-nineties, I am aware of the many concerns and promises made during this expansion process. While occasional conflicts have occurred, one can only proclaim the past effort a resounding success. I am confident our military and civilian leaders will make every effort, in this necessary new expansion, to maintain mission joint readiness while keeping safety as the utmost consideration and local impact to the absolute minimum.

Thank you for the opportunity to provide input and please advise if I may assist further.

Sincerely,

/s/ Gary Wilken

Subject: expansion of airspace/ training area

To the person who will ultimately make the final decision on this.

Regarding the JPARC. I am totally against any expansion. You do not need it. first of all the reality of fighting in the environment you train in is NIL.

the enemy would die just trying to access area's like that, be consumed by mosquito's and black flies, maybe fall in a crevasse.

the second reason is that as you remove airspace , you remove freedom to travel around our state and the continental 48 states...

would you as a military enlisted person, who is supposedly trying to protect OUR freedom, and receives his/her pay from the hardworking people of the US. Would you want to be responsible of taking away more freedom from the Men and Women of this country than you are giving. Think about what you are doing very hard before you make these decisions. No more whittling away at our freedom.

Marc Wisdorf Airline Transport/Commercial pilot

I0130

12 June 2012

Dear Sir

I do not support any use of State of Alaska land or air space. The U.S. Federal government has control of 60% of land in Alaska. No more land or space put under your control.

I can not hunt fish trap or most Federal lands now. I will not give you more.

My solution to you is for the Federal government to give back control of Fish and Game to the State of Alaska. Then give us all the land we were entitled to in the Statehood Act.

Use your own Federal land. you claim ownership of 60% Alaska.

I used to Hunt, Fish, Trap or most land in Alaska freely. now the military and Federals all say no to use. Unless I'm willing to tell them how long I'll be on the lock, obtain Federal permits, agree to give up all my rights as a free citizen. Taking of Fish, Game, Fur can not be done except for those chosen few you endorse.

Now take the land we will

I0130

never get it back again.

In the years past I have been harassed by military operations during hunting season on state lands.

I live a subsistence life style but its not a Federal subsistence life style. Its a State of Alaska subsistence life style. The State of Alaska has all its citizens given equal access to land and resources. If our Federals give access to only those who you personally choose.

Our founding fathers had the right idea. You new fellows messed it up. Better get out a copy of the constitution and read it over. I'd suggest more than once.

A patriot

Reed | | | Biological Resources, Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 2 - Realistic Live Ordnance Delivery, 5 - Night Joint Training, 6 - Unmanned Aerial Vehicle (UAV) Access | Fox 3 MOA Expansion: Recommend the No Action Alternative. All other alternatives will result in further loss of access to and use of State lands for recreation and subsistence, more restrictions governing the use of land, and no viable method for communicating the closures of land effectively to stake holders. Realistic Live Ordnance Delivery: Recommend the No Action Alternative. The selection of any other alternatives that expand area will result in loss of Non DoD-owned/managed airspace-restricting pilots from flying this popular corridor. The loss of this airspace in particularly the Lake Louise area would be devastating to both recreational and commercial pilots, as the Lake Louise area is one of the States most popular year-round recreational areas. Limited road access makes flying in by small planes the only viable option for access year-round. Lastly, consideration must be given to the continually declining populations of wildlife in the area. Caribou and moose are two wildlife populations that would be significantly impacted by Live Ordnance training and the losses as a result of this training on formerly State-Owned lands cannot be accurately assessed. Night Joint Training: Recommend Alternative A. Unmanned Aerial Vehicle Access: Recommend Alternative B. |

| I0134 | P. William Tappen | MAJ | US Forces - Afghanistan | General (to the EIS), Airspace Management, Safety (Airspace), 3 - Battle Area Complex Restricted Area Addition, 4 - Expansion of R-2205 Restricted Area, 6 - Unmanned Aerial Vehicle (UAV) Access | <p>I am writing to express my opposition to more restricted airspace in the Delta Junction area, and along the routes to Fairbanks and Anchorage. I can and do work with the MOAs, but restricted airspace is already too much. More will only make recreation, work, and safe, expeditious travel so much harder for rural Alaskans. Below, I am including a conversation I had this week with the XO of the Predator UAS company that supports us here in Afghanistan. If you will read it, you will see what an experienced Army helicopter pilot thinks after reading about the proposed expansions in Alaska. Finally, I have a farm in Big Delta, my family is still there, and I am a bush pilot that is looking forward to coming home to the Interior. Previously I have worked in the Ground-based Midcourse Defense program at Fort Greely, and hope to be assigned there again. I fly my Cessna 170B in support of our farming, more quickly transporting my family around Alaska, on some TDYs, and recreationally for sightseeing, camping, fishing, hunting, etc. I hope that you will reduce your desired dependence on restricted airspace in the air corridors of Interior Alaska, especially over the Delta Junction area. Thank you, MAJ Paul William Tappen MAJ Tappen, it was a nice tour to hold. Thanks for the pictures. I love seeing the ones from Alaska, although it makes me feel homesick all over again! The article you forwarded was pretty interesting. It seems to me like we military have plenty of airspace without adding more to the Alaskan sectionals. What's more, we don't exclusively use the military airspace anyway. We can go wherever we want! One of the perks of flying in AK, to be sure. I would think more restricted/special use airspace is unneeded. Range control should be able to help coordinate altitudes for UAS when in operation and allow the flyers to be professional in their occupation. As long as the UAS use the current MOAs, range control could easily coordinate with other military users letting them know there is a UAV in the sky. Most Respectfully, PHILIP T. EARWOOD CW2, AV Executive Officer Aggressor 05 A/306 MIBN - TF ODIN</p> <p>-----Original Message----- From: Tappen, Paul MAJ MIL USA USFOR-A Sent: Saturday, June 30, 2012 6:18 PM To: Earwood, Philip T CW2 TF Odin Company XO Subject: (U) Thanks for the Tour UNCLASSIFIED</p> <p>Chief Below is a story about the proposed additional restricted airspace in Alaska, esp. in the Delta Junction area (my home). Read it and see how much you recognize. Thanks for the tour, photos and answers. I had a great time and my sons were pretty excited by the pictures, esp. the two boys in the Air Force. When I become the USFOR-A CJ2X in Oct, I plan on calling you guys. And if you need help w/anything here in Kabul, just call. Thanks, MAJ Bill Tappen NKC BSG XO</p> |

I0134

AOPA seeks changes to large military airspace proposal in Alaska By Dan Namowitz Share on google_ plusone Share on twitter Share on email Share on print More Sharing Services 1. AOPA is urging the Department of Defense to work with the aviation community to solve access and routing problems posed for general aviation by a revised special-use airspace plan for the Joint Alaska Pacific Range Complex (JPARC). Members may comment on the plan by July 9. In formal comments filed June 26, on the plan's draft environmental impact statement, AOPA called for solutions to numerous concerns pilots have raised about proposed new uses, boundaries, and altitudes of the complex of land, sea, and air training areas that support military exercises in Alaska—known as the JPARC plan. The association opposed various parts of the plan and urged "utmost caution" in modifying other portions of the airspace, dependent on by a \$3.5 billion state aviation industry, and providing access that "enables many small communities to exist." "This range is already the largest military airspace complex in the country," said Melissa McCaffrey, AOPA senior government analyst for air traffic. "Pilots should examine how the proposed changes would affect their ability to fly."

AOPA objected to a proposed significant expansion and lowering of the floor of a military operations area (MOA) in an area "frequently used by general aviation pilots and air taxi operators" to conduct air tours, support businesses, and provide access to recreational areas. Expansion of the Fox MOA should be minimized to avoid raising the risk of midair collisions near population centers including Anchorage, Fairbanks, and the Matanuska-Susitna (Mat-Su) Borough, AOPA said. Also, any expansion should be accompanied by increased coverage by the special-use airspace information service, which provides pilots with information about MOA use. AOPA expressed concern about lack of assurances that funding for program infrastructure would remain sufficient. Although existing T-routes and the instrument approaches provided by the Wide Area Augmentation System have increased IFR access, such gains could be "seriously degraded" by expanded MOAs, AOPA said, requesting in the formal comments that expansions be deferred until real-time IFR access through active MOAs can be effected.

I0134

| | | | | | | |
|-------|--|--|--|--|--|---|
| I0134 | | | | | | <p>Another concern was the proposal to establish restricted airspace over the Battle Area Complex, near Delta Junction where winds and variable weather and the need to access a mountain pass already limit pilots' navigational options. Proposed restricted corridors for the sole purpose of unmanned aerial vehicle operations—which the FAA has customarily rejected—“would clearly interfere with the safe and efficient access between Fairbanks, the Richardson Highway Corridor and the Alaska Range,” AOPA said. The association has been calling for development of a reliable sense-and-avoid capability for UAVs, rather than creation of segregated airspace for their development. AOPA said the JPARC proposal provides an opportunity to study the Stony, Naknek, Susitna, and Galena MOAs “to determine if they are still required to meet modern training needs.” The results of the evaluation should be included in the environmental impact statement and made available for public comment. Members may comment on the proposal online, by email, or by mail to ALCOM Public Affairs, 9480 Pease Avenue, Suite 120, JBER, AK 99506. Please share your comments with AOPA.</p> |

| I0135 | Robert Prescott | | | Purpose/Need, Cumulative Impacts, Airspace Management, Noise, Land Use, All proposed actions | I am still very concerned with the proposal to use Fish and Game management area #13 as a place for your exercises!! This area is vital for Caribou calving and migration as well as an area of large moose population. Low flying aircraft in certain areas at certain times can change the calving production, and also migration routes!! Use of live fire ordinance will close those areas off for personal use by Alaska citizens. Building roads and facilities in this area will close off more of the area. There are plenty of areas that are not used as extensively for fishing, hunting, recreation as Game management area #13!!!! Please find a area that meets your criteria and does not ruin the land for the animals and humans!!!! Your proposal is completely wrong for this area!!!! Bob |

| I0136 | John Hester | | | General (to the EIS), 1
- Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | I think extending the MOA area and dropping its lower limit to 500' AGL is absolutely crazy. The Talkeetna mountains are heavily trafficked by private aircraft and with these proposed extensions, a very dangerous situation is being set up. Alaska is a huge state and it would make far more sense to have low level military training done far away from populated areas. In addition, the idea of taking fighters out of Elson and basing them at JBER is a decision obviously made by people who missed history class. Putting all of the top cover in northern U.S. at one base is a bad decision. Ask them if they have ever heard of what happened at Pearl Harbor in 1941. |

| I0137 | Scott Chesney | | | General (to the EIS), Purpose/Need, Cumulative Impacts, Mitigations, All proposed actions | I am opposed to ANY expansion of training areas in Alaska. I am constantly amazed, when I hear on the one hand (around red flag times) about how the training areas in Alaska are the largest and best available to the US and many of its training partners, and on the other hand (when the DOD wants yet more), whining about how the DOD can't do the training it wants to do because of limited training space. You can't have it both ways, at least mere mortals can't. I reiterate the same comments I made in the first time around. 1. DOD controls enough land and air space in Alaska. 2. DOD has no respect for the land, air, or water it controls. 3. DOD has a proven track record of befouling the land, air, and water it controls despite promises to not do so. NO ADDITIONAL SPACE IN ALASKA UNDER DOD CONTROL! |

Military Operations
Area (MOA)
Expansion and New
Paxon MOA, 3 -
Battle Area Complex
Restricted Area
Addition, 6 -
Unmanned Aerial
Vehicle (UAV) Access | To Whom it may concern My name is Terry Cartee, a born and raised Alaskan, retired CW4 with 36 years of aviation service in the Alaska National Guard. The proposed JPARC Range increase shows a blatant disregard for the lifestyle and safety of the Alaskan people. Mixing high speed jet traffic with known civilian VFR corridors is irresponsible and bordering on criminal negligence. The proposed Fox 3 MOA Expansion covers homes, businesses and known VFR traffic routes and to lower the floor to 500 feet is a extreme safety hazard. The proposed Paxton MOA down to 500 feet is again in the only VFR corridor between Gulkana and Fairbanks. Mixing high speed jet traffic and slow civilian air traffic is irresponsible. The proposed Battle Area Complex Restricted Area is going against a signed agreement with the Big Delta that it would not be expanded. This also is the only VFR corridor for civilian air traffic and to make it more restrictive is putting these pilots in harms way. Th UAV corridors and use do not currently meet the FAA requirement to "See and avoid". UAV Corridors near a major city, is again irresponsible. Build an airstrip in the already Restricted Areas and fly them in that area. Please feel free to E-Mail me if you have any questions regarding this statement. Terry Cartee CW4 Retired |

| I0139 | Becky Long | | Alaska Survival | General (to the EIS), Purpose/Need, Cumulative Impacts, All resource areas, Airspace Management, Noise, Safety (Airspace), Safety (Ground), Physical Resources, HAZMAT, Land Use, Socioeconomics, Subsistence, Air Quality, All proposed actions, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>COMMENTS ON DRAFT EIS MODERNIZATION AND ENHANCEMENT FOR JPARC 7/5/12</p> <p>This is to support the NO ACTION ALTERNATIVE. JPARC has not made a case for expansion of MOA's and Above Ground Level (AGL) dimensions. I also support the Matanuska Susitna Borough Assembly Resolution 12-076 that passed unanimously 6/28/12. It is an excellent resolution that expresses many of my comments on the draft EIS. I also support the concerns of the Lake Louise Community Non-profit Corporation and the comments of the Talkeetna Community Council, Inc. Other concerns that were not dealt with adequately in the draft EIS are: • The introduction of hazardous substances and the creation of hazardous waste sites in the MOA areas. The military leaves hazardous waste sites wherever its presence is felt. The clean-up is a long time in the future with public funds being used. Can we afford this? • Air pollution from the increased flights and the pollution from the chaff used must be considered more fully. • Increase in military accidents and military and civilian aircraft collision accidents were not considered along with the creation of new access roads to get to the crash sites. When the F-22 crashed in the winter of 2011, a whole new access road was built which will be there forever. Low altitudes to 500 feet AGL combined with supersonic flights are not compatible with civilian quality of life and will cause negative impacts to wildlife. This will impact recreationists, hunters, subsistence resource users, berry pickers, ATV travelers along the Richardson and Denali Highways, cabin owners in the Lake Louise area, and backpackers in the Talkeetna Mountains and near the Denali Highway, and hunters, fishers, and trappers throughout the expanded MOA areas. For many reasons, I support the NO ACTION ALTERNATIVE, NO REDUCTION IN FLIGHT ALTITUDE LEVELS, NO INCREASES IN ORDINANCE AND TRAINING AREAS. Becky Long</p> |

| I0140 | Peter Marshall | M.D. | Self Employed Physician | General (to the EIS), Cumulative Impacts, Airspace Management, Safety (Airspace), Land Use, Infrastructure and Transportation, Socioeconomics, All proposed actions | <p>I am a USAF veteran, an Alaskan resident for the past 37 years and a private pilot and single engine aircraft owner for 30 of those years. It is commonplace for Alaskans to state that small aircraft, both commercial and private are the life blood of Alaska. The proposed regulations seeking to add to the military use airspace will in my opinion severely and negatively impact civilian aviation throughout our state. These effects will be felt in every sector including Fish and Game surveys, mail delivery, passenger transportation and commercial enterprise such as fuel delivery. My greatest concern, however is the burden of unsafe flying conditions that will be generated by the 500 feet ceiling imposed in much of the area under consideration. This leaves pilots of small aircraft very little margin for safety in the situation of high winds, adverse turbulence or other unforeseen weather events that are commonly encountered throughout Alaska but are particularly prevalent in the Alaska Range. For example, I have experienced two incidents flying through Windy Pass where I encountered severe un-forecast turbulence and had to climb to 10,000 ft to get to safety. In another incident I encountered such strong headwinds in Windy Pass and another time above Black Rapids that my 94 mph Arctic Tern was actually traveling backwards. One again my only recourse was to climb. None of these alternatives would have been available if the proposed new rules are put in place! My understanding of the proposed expansion is that the existing and well established routes of flight between Fairbanks and Anchorage and Fairbanks and Delta/Tok/Tanacross will be restricted in ways that will compromise air safety. This is, in my opinion unacceptable and will impose an unprecedented burden on the general aviation users in Alaska. As a supporter of the USAF I am embarrassed that the branch of service that brought me to Alaska would embark on such a reckless and draconian action! Sincerely, Peter Marshall, M.D.</p> |

Military Operations
Area (MOA)
Expansion and New
Paxon MOA | This is a highly traveled area by general aviation pilots. Using this area for training by the military is bound to cause an accident with a small airplane and I think it is irresponsible to think otherwise. Alaska is a large state with many unpopulated areas that the military can use for their training and I strongly request they look at those unpopulated areas for their training. |

| I0142 | Debra Oskolkoff | | | General (to the EIS),
All resource areas, All
proposed actions | I am not in favor of the proposed actions. I am in favor of a professional & well-trained military, but the cost to Alaskans through the impacts - real & possible - convince me that Alaska is not the optimum choice for this proposed expansion. As a Native Alaskan, Nimiichik Native Association shareholder, Cook Inlet Region, Inc. shareholder & Kenaitze Indian Tribe member, my heritage is in Alaska and I speak from the heart. Furthermore, access to Alaska by nations to the West/Southwest, is much easier than access to, Oklahoma, for example. Should a 'situation' arise, this huge military training area would become a prime target & would be more vulnerable than one otherwise situated. Any proposal which puts our country & our military in a more vulnerable position than necessary, is not a good proposal. |

| I0144 | Mark Binggeli | | | Airspace Management, Safety (Airspace), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 4 - Expansion of R-2205 Restricted Area | As a long time Alaskan and winter and summer visitor of the Tanana Flats and Alaska Range, I am highly concerned about increasing the restricted areas in the interior of Alaska. As a private pilot the plan to confine the routes to corridors increases risks and reduces safety. The new Paxon MOA is of great concern. With the reductions of Air Force activity in the interior other than periodic Red flag exercises should not justify the increase in the changes proposed. There are little to no permanent Air Force fighters or bombers stationed in interior Alaska. The 'Fighter Wing' is not a real fighter unit, only an exercise unit. Units from outside Alaska should seek training areas in the Lower 48 and not encroach on and reduce our State's available resources. Or better yet do the flying over the National Parks (Denali & Wrangell St Elias) for the "Training" |

| I0145 | Robert Kelly | | | Safety (Airspace) | First let me say, I am in full support of the military and our need for them and their need to train. I know what it takes to stay proficient and recognize the need for special airspace for the military to do this. It is my understanding that the last time the military increased the airspace for training, it was stated "We will never need any more than this." Well that was several years ago and here you are back asking for more. If we give up all our liberty's and all our rights, then of what use is this country. You have enough airspace and "We the People" say the rest is ours, as well as what we allow you to use when we are not needing to use what we have already allowed you access to. |

| I0146 | Maureen English | | | General (to the EIS),
All resource areas, All proposed actions | <p>The training areas in Alaska are already the largest in the US. The claim is that they are also the best in the US. Why does the DOD claim to need more? I am opposed to any and all of the proposed expansions. Yes, Alaska is the Last Frontier, but it will not stay that way if the DOD is allowed to continually control more and more land and air space. The DOD has already proven that it has no respect for the land, air and water it already controls. For example, no firefighting is done on land where unexploded bombs exist...land where animals do still exist, and where unsuspecting children have been maimed and killed. Respectful landowners clean up their mess! The current proposed actions affect too many people who live in and enjoy Alaska. The proposals will limit access to private pilots, hunters and other recreational users. The noise alone will affect numerous residential areas – I still remember how our house shook with each explosion during the Fall Stryker training exercises at Ft. Wainwright (or Eielson AFB). The explosions continued well past 2am. From the list of resource areas, it looks like it's well known who and what will be affected by the expansions. Please recognize that more harm than good will come out of allowing the DOD to continue with this plan. NO to #1 NO to #2 NO to #3 NO to #4 NO to #5 NO to #6 NO to #7 NO to #8 NO to #9 NO to #10 NO to #11 NO to #12</p> |

| I0147 | John Brown | GA Pilot | self | Purpose/Need, Description of Proposed Actions and Alternatives (DOPAA), Cumulative Impacts, Airspace Management, Safety (Airspace), Air Quality, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 - Battle Area Complex Restricted Area Addition, 4 - Expansion of R-2205 Restricted Area | IFR routes should be made available between FAI VORTAC and ORT during all airspace activity. The loss of these routes a few years ago has resulted in aircraft operators conducting an increased number of VFR flights across this route. It has also resulted in hundreds of Air Carrier aircraft being rerouted into the already busy ANC-FAI arrival flow and suffering increased expenses associated with the longer routing. This has also caused rerouted traffic to conflict with exercise tankers that depart EIL with ENN as their first enroute fix. Increasing VFR traffic is a net safety reduction, IFR aircraft are in continuous communication with ATC and fly at known altitudes and speeds. VFR aircraft have no communication requirement and may be operating on random routes at any VFR altitude. There should be two altitudes available for unpressurized aircraft and two above FL180 so high performance aircraft can operate safely within positive controlled airspace. ATCAAs should be published on IFR High charts to allow flight crews a chance to understand their alternatives. |

| I0148 | BRIAN HARLAN | MR | | General (to the EIS) | Comments in regards to the expansion of the R-2202 restricted areas across the Little Delta River. These areas are all have long histories of recreational use for Alaskan sporting activities by both individuals and guiding services. Expansion of these areas would block essential SAFE flight corridors for many small aircraft users transitioning through the region. The R areas have already taken away many quality recreational areas within reasonable distance from the Fairbanks area. By further deleting these long standing public use areas the military will create an unnecessary division with many local community members all for the name of "land control". Are these expansion REALLY necessary to complete the mission? Or is this just a matter of expanding an empire at the cost of the subjects that pay the taxes that support the empire. The bottom line should be the greatest availability of resources with the least impact on the greatest number of citizens. |

| I0149 | Steven Poirot | | | General (to the EIS), 6 – Unmanned Aerial Vehicle (UAV) Access | <p>Most of these extensions conflict directly with heavily used airspace. My son and I just flew through one of these proposed areas yesterday. Lowering the floor in the Matsu area to 500' forces us to fly too low to get to some of the most scenic areas of Alaska and increases congestion therefore reducing safety. Further, increasing route lengths by cutting off access to so much airspace will make some trips impossible for those of us with limited range. Do you propose that only more expensive planes with longer ranges should be allowed to fly now, or that we should go over-gross by carrying more fuel? Either way, it will cost Alaskans more money to travel. I thought the point of having a military force was to protect citizens, not put them in danger, which these proposals do? Alaska has always been very supportive of the military here, but I can easily see how that could change if you start trying to grab all of our airspace and put us in danger. I am however, very supportive of UAVs. I would support proposals to use UAVs in a number of areas for a number of purposes.</p> |

| I0150 | Charles Pearson | | | General (to the EIS), Purpose/Need, Description of Proposed Actions and Alternatives (DOPAA), Airspace Management, Safety (Airspace), All proposed actions, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 - Battle Area Complex Restricted Area Addition, 4 - Expansion of R-2205 Restricted Area, 6 - Unmanned Aerial Vehicle (UAV) Access, 12 - Joint Precision Airdrop System (JPADS) Drop Zones | <p>I am disappointed to learn of recent plans by the USAF with respect to Alaskan airspace. The rugged airspace and meteorological challenges in Alaska tends to funnel all users into fairly narrow and predictable patterns. Restricting access to locations critical to transportation and commerce comes at a tremendous cost financially with a corresponding adverse impact to aviation safety (in the area with the greatest challenge with respect to aviation safety in the country). This despite being assured by the USAF five years ago not to be concerned about airspace requirements encroaching upon VFR corridors or low altitude IFR traffic connecting Alaska and Canada. Furthermore, opening up UAV airspace where "see and avoid" is the rule of the day and many of the user aircraft are not equipped with transponders and surveillance radar is not available (below 3,000') is quite frankly unconscionable. I have personally been advised by the USAF that operations such as C17s doing uncharted low level training is OK because "practice airdrops at Ft Rich are necessary since the troops don't get to maintain their currency in the sandbox. You need to be watchful and stay out of their (C17s) way."</p> <p>There is no other place in the country where military aircraft develop "in house" training routes that are not published, not NOTAMed, or otherwise disseminated. I can't believe this practice occurs at Maguire or Travis, but in Alaska you develop in the ready room low level routes between Wasilla and Ft Rich transiting some of the most heavily utilized airspace in the world with large jets doing 250kts (which means overtake of on average 150kts) because it is inconvenient to fly an hour to train? Many of the general aviation aircraft based in the MatSu/Anchorage area are not transponder equipped (not required), not ADS-B equipped, and no window out the back to see if a C-17 is bearing down on them. A squadron Ops Officer told me "too bad, they should have transponders so we can see them on our system." I am a huge supporter of the military and have a fair appreciation of the competing interests you face. I was a tactical aviator for most my 27 years of service. However, I can't help but think this steamroller missed much of the "risk assessment" process required by military aviation doctrine. Alaska is a huge place, why are you demanding the General Aviation community (part 91/135) assume the significant cost and risk associated with this plan?</p> |

|--------------|---------------|-------|--------------|--|--|
| I0152 | robert wesley | mr. | self | <p>1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA, 2 - Realistic Live Ordnance Delivery, 3 - Battle Area Complex</p> <p>Restricted Area Addition, 4 - Expansion of R-2205</p> <p>Restricted Area, 5 - Night Joint Training, 6 - Unmanned Aerial Vehicle (UAV) Access, 7 - Enhanced Access to Ground Maneuver Space Areas, 8 - Tanana Flats Training Area (TFTA) Access Road, 9 - Joint Air-Ground Integration Complex (JAGIC), 10 - Intermediate Staging Bases (ISBs), 11 - Missile Live Fire for AIM-9 and AIM-120 in the Gulf of Alaska, 12 - Joint Precision Airdrop System (JPADS) Drop Zones</p> | <p>* The proposed Fox 3 MOA additions extend laterally and vertically in to an area of Alaska highly used by the general public for business and recreation, due to its close proximity to major population centers of the MatSu Valley, Anchorage and Fairbanks. Lowering the ceiling to 500ft increases the probability of mid-air collisions for commercial pilots conducting tour activities and general aviation pilots engaging in hunting, mining, recreation or other activities.</p> <p>* The low-altitude portion of the proposed Paxson MOA includes a major VFR route connecting northern Alaska with the south central and eastern regions of the state. Other portions of this proposed MOA are used for mining and recreation. Confining VFR traffic to corridors through this area concentrates traffic, potentially creating an unsafe condition for civil aviation. This area is not conducive for a low altitude MOA.</p> <p>* Under current FAA rules, active MOAs block access by IFR aircraft, other than emergency and lifeguard flights. This lack of access limits economic viability and reduces safety to pilots and the public in the communities that our underneath or near this airspace. Establishing MOAs that block IFR airways is directly counter to the work done by the FAA in recent years to increase IFR access with GPS approaches and airways. No new MOAs should be approved that block IFR airways until the FAA and military have developed procedures to allow IFR access to civil aircraft.</p> <p>* The military constructed the Battle Area Complex south east of Delta Junction knowing that this area is important to civil aviation to access Isabel Pass. No restricted airspace should be established over this complex.</p> <p>* Restricted areas west of Delta (2202 and 2211) already limit access between Delta, Fairbanks and the Richardson Highway corridor. We oppose alternatives that completely connect these existing restricted areas, and further block access for mining, hunting and recreation.</p> <p>* Allowing Unmanned Aerial Vehicles (UAV's) to transit between Ft. Wainwright, Eielson and Ft. Greely and the restricted areas where they conduct training limits access, potentially creating a safety hazard for civil aircraft operating to and from Fairbanks, Delta and the Richardson Highway corridor. No segregated airspace should be established in these areas.</p> <p>* The recently proposed relocation of the F-16's from Eielson AFB to IBER appears to have a direct impact on the airspace and airports in Anchorage and the Mat Su Valley. This needs to be quantified and addressed as part of the cumulative impact of the Draft EIS.</p> <p>* Existing MOAs including Susitna, Stony, Naknek and Galena, are not addressed. They should be studied to see if they fit the purpose and need of the JPARC mission.</p> |

| I0153 | John Parrott | | | Description of Proposed Actions and Alternatives (DOPAA), All proposed actions | <p>I am a 20 year USAF aviator who spent 2 of those years flying in AK and now live here to enjoy all this state has to offer including a robust aviation culture. I am an ardent supporter of the military as well as the general aviation community. I fully understand the need for adequate training airspace. Having attended one of the public presentations concerning the JPARC EIS I must admit I had many unanswered questions that I felt should have been addressed. How is the current airspace inadequate? Is it too small, too far away or otherwise unsuitable? If it is not going to support the future training needs, will it be removed from military use? If existing airspace isn't useful it shouldn't be kept for military use and should be returned to the NAS. Restricting IFR traffic into and out of FAI should not be pursued. Attempting to make the argument that the training airspace needs to be near the control complex is silly while the air war Afghanistan can be controlled from the US. UAS integration into the NAS remains a challenge. See and avoid is not practical and there does not appear to be a plan that will make "sense and avoid" a reality. All in all, JPARC looks like a great greenfield concept that DOD is attempting to impose on a brownfield without taking into account the negative impacts to the existing uses. Offering to pursue funding or study possible mitigation appears to be paying lip service to the existing users. I think there are viable solutions and am disappointed that something more tangible has not been developed.</p> <p>Regards, John Parrott, USAF [REDACTED]</p> |

|--------------|-----------------|-------|--------------|---|---|
| I0156 | Robert Gastrock | | | Cumulative Impacts, Airspace Management, Safety (Airspace), Infrastructure and Transportation, All proposed actions | <p>As a military, general aviation, and commercial pilot who has resided in Alaska and flown throughout the state since 1968, I feel qualified to comment on the proposed alteration and expansion of JPARC military training areas. As a retired military pilot with many years and thousands of hours flying C-130s in a tactical airlift role, I understand and acknowledge the need for effective training areas for military aircrew. Some realistic conditions can never be replicated by simulators, and Alaska offers unique geographic and topographic venues that cannot be duplicated elsewhere. As a private and commercial pilot with much experience in Part 91, 121, and 135 operations, I also understand the impact created by MOAs and other Special Use Airspace. These areas can impose significant challenges for pilots and operators seeking efficiency and safety in their flight operations. As an aviation safety professional with experience as both an Air Force Safety Officer and Program Manager for the Medallion Foundation, I am quite concerned that the JPARC proposal would expand the "reach" of designated military training areas to the detriment of the civilian aviation community, both commercial and private. Moreover, it would impinge on aviation safety as civilian aviators would be pressed into operating with much more restriction, especially in key corridors such as along the Richardson Highway. Given the challenges of Alaska's often harsh weather and terrain, additional constraints imposed by artificial vertical and horizontal boundaries associated with MOAs and Restricted Areas create real threats to safe flying. While there may be a valid need for tactical training areas for new generation aircraft in both high and low altitude environments, the size and scope of those reservations must be kept to a minimum. They must be located to maximize de-confliction with other airspace users and, to the maximum extent practicable, have designated corridors or "floors" that permit safe transit by civilian aviators. Respectfully submitted, Robert C. Gastrock</p> |

| I0157 | allen barrette | | | General (to the EIS), Description of Proposed Actions and Alternatives (DOPAA), Cumulative Impacts, Land Use, Socioeconomics, Subsistence, 2 - Realistic Live Ordnance Delivery | <p>Allen F. Barrette 380 Peger Rd. Fairbanks, AK. 99709 907-452-6047 Re: Realistic Live Ordnance Delivery (Blair Lakes and Donnelly Training Area) My comments are pertaining to the State land in Proposal 2. Realistic Live Ordnance Delivery Area, proposed restricted area. I do not support any restriction to access to State lands and or closing of State land to Alaskans to further training of our valued Armed Forces. Alaska has very well written and interruption through the Alaskan Supreme Court a Constitution. The Alaskan Constitution Article 8, the Natural Resource article grants Alaskans many protections and guarantees. Sections 1-4, and 13, 14, and 16 point out my concerns and you should be aware of them. I also don't believe the EIS addressed the economical and recreational value of the possible 305,000 acres of State land that could have access restrictions levied on it. This area is highly valued and used by many Alaskans to gather their wild food resources on annual bases. Even though the EIS made note of State or privet airstrips, it did not consider the many Super Cub type airstrips that are used. (these are not noted on any maps, but they exist) The same is true of many traditional hunt camps. I did not see in the EIS the possible loss of income from all the guides that are registered to provide guided hunts for this area. With only a minimum of 2 week notice for exercises, how does one book guided hunts, and fulfill contracts with clients if they cannot be in the field? What about air transporters. How will the anticipated 90 to 150 days use by the military effect their businesses? The same could be asked of the miners. Trapper is this area will also be economically affected. If trappers are restricted from being in the area the result could be loss of reasonable opportunity to harvest furbearers, loss of furbearers being in the trap to long, furbearers having to be in traps long than what is reasonably expected. Maintaining a trap line has social, moral and ethical components to it also. Note: Trapping season is November – April. Even though this is not a State designated Subsistence area (by definition) many Alaskans use it as such, they treat the wild food they gather as a necessity for life.</p> <p>The 305,000 acres and predicted 90 to 150 days of use by the military would have a great impact on those who rely on those resources. Moose in this area are managed under State intensive Management (IM) practices. This means "high levels of human harvest" restricting this area at any time during September-November would impact the IM plan. Sheep, caribou, bears are not designated as IM, but many Alaskans do pursue them as a valuable wild food source and some consider them as somewhat of a trophy. The taking of sheep and caribou happens August through September. Black bears have a "no closed" season but the majority of the bears are harvested during the months of June and August and September.</p> |

I0157

Grizzly bears are harvest in the months May and April, and the gain in September till they go into the den sometime mid to late October. So it is very hard for me to see how Alaskan could co-exist with this current proposal on State land, and not impact us greatly. To put in some sort of perspective Alaska only has control of 33% of land within the State. You the Federal Government have the rest. NOTES: I find it somewhat odd that the U.S. Military's EIS on aircraft noise has little effect on game population and their movements. Also that aircraft noise does not affect the values of a person's wilderness experience. Yet the National Park Service, Bureau of Land Management, National Petroleum Reserve-Alaska, National Wildlife Refuge and the National Forest and Conservation Areas all say and have made policies or regulations or are in the process of doing so, to make restrictions on aircraft use with in their jurisdictions. Who is correct about aircraft noise, and how it affects game and wilderness values? Is the State of Alaska and the JPARC EIS correct, or are all the other Federal Agency correct? RECOMMENDATION: Is to not allow any live ordnance release over State controlled land that would restrict access to those lands. Thank you for allowing me comment. Al Barrette

|--------------|--------------|-------|--------------|---|---|
| I0158 | John P. Cook | Dr. | n/a | General (to the EIS),
Cultural Resources | <p>I am a retired professional archeologist with considerable experience in Alaska. This is a long and detailed DEIS and incorporates a great deal of information; unfortunately it is not particularly good regarding the treatment of cultural resources. This probably is directly due to the fact that the lead cultural resource writer is unknown to any archeologist in Alaska and has, obviously, little personal knowledge of our archeology. Some more specific comments follow:</p> <p>3.1 FOX 3 MOA EXPANSION AND NEW PAXON MOA (DEFINITIVE)</p> <p>1. "No new construction would be associated with this action." But construction access for the trailers is ground disturbing and, therefore, potentially destructive of archeological sites.</p> <p>2. only the "records of the National Register of Historic Places (National Register) and National Historic Landmarks (NHL)." Is not adequate; there are a large number of unregistered sites within this large expanse of Alaska.</p> <p>3. "Archaeological sites under existing training airspace include Native burial grounds, village and settlement sites, and historic mining sites." No one knows where the "burial grounds" are or even if there are any; the same for "village and settlement sites". This is an example of the lack of knowledge of Alaskan Native settlement patterns.</p> <p>4. The lack of registered properties is directly related to the lack of military activity and recognition of the sites within their jurisdiction. There may (probably are) many such eligible properties.</p> <p>5. "There are no Alaska Native tribes within this area" but the "tribes" did not have prescribed territories and there was considerable use of this area for hunting and trading.</p> <p>6. "Impacts on traditional resources under airspace can include the noise and visual effects of aircraft overflights on rituals and ceremonies" This is nonsense. There are no rituals and ceremonies in these areas, except, perhaps, in the villages. Again, a complete lack of knowledge about the Alaskan situation.</p> <p>7. "Scientific studies of the effects of noise and vibration on historic properties have considered potential impacts on historic buildings, prehistoric structures, archaeological cave/shelter sites, and rock art." There have been no such studies in Alaska; in addition, there are no "cave/shelter sites" or "rock art" in the area considered. This is an unnecessary comment and is plain stupid.</p> <p>8. "The potential for traditional resources in the area was identified using ..." consulted agencies, plans, maps, and staff." This did not include any knowledgeable persons of professional stature. The agencies, etc. are not sufficient to establish the potential of cultural resources.</p> |

| | | |
|-------|---|--|
| 10158 | <p>9. Aircraft noise—a common factor in this DEIS—is ridiculous when applied to archeological remains and almost so when directed at other historic properties.</p> <p>10. “Consultation with potentially affected Alaska Native tribes...” is laughable. There has certainly been no meaningful such consultation.</p> <p>11. However, overall, I agree there will probably be “no significant impacts”; more likely—NO impacts of any sort from this particular action, except for the potential trailer construction.</p> <p>3.2 REALISTIC LIVE ORDNANCE DELIVERY (DEFINITIVE)</p> <p>1. Tanana Flats Training Area: 134 sites have not been evaluated. The land area in northeast DTA in TA 544 and in southwest DTA in TA 533 for the two proposed new target areas has not been surveyed for archaeological resources.</p> <p>2. line 31. No such term as “flakestone” in Alaskan archeology</p> <p>3. “Archeological sites under training airspace include Native burial grounds, village and settlement sites...” and historic mining sites” Considering the lack of investigation by any military agency, this is not true. It may be, but considering Native settlement patterns, it is unlikely that any village and/or settlement sites are in the ROI(except for short lived hunting camps). “Burial grounds” are, to begin with, a complete misunderstanding of Native burial practices, as well as completely unknown as to locations.</p> <p>4. Noise—again</p> <p>5. “ALCOM has completed government-to-government consultation with potentially affected Federally recognized tribes, regarding their concerns about potential impacts on Tribal rights...” This has not been properly pursued; a letter was simply sent out; no real consultation was completed.</p> <p>3.3 BATTLE AREA COMPLEX RESTRICTED AREA (DEFINITIVE)</p> <p>1. Helicopter training” implies the use of ground cleared spaces—usually by bulldozer—destroying any potential cultural sites. “70 percent of the USARAK helicopter operations” The helicopter pad at the Oklahoma range destroyed what was certainly a Register-eligible archeological site. Similar pads at Clear Creek Buttes involve archeological sites.</p> <p>2. I have been on the ground within BAX and there are a number of archeological sites that have not been fully evaluated.</p> <p>3. “Archeological sites under training airspace include native burial grounds, village and settlement sites, and historic mining sites” and “include structures relating to gold mining, trapping, or the railroad” Within the BAX area, none of this is true, except, maybe, for trapping and gold prospecting. Again, a total lack of knowledge.</p> <p>4. “One hundred thirty sites are located within the original boundaries of the BAX SDZ (not all sites are eligible for the National Register).” Because they haven’t been evaluated.</p> <p>5. “Rapids Roadhouse, also known as Black Rapids Roadhouse, in Delta.” It is NOT in Delta.</p> | |
|-------|---|--|

I0158

6. "ALCOM has completed government-to-government consultation with potentially affected Federally recognized tribes, regarding their concerns about potential impacts on Tribal rights, Tribal resources or Indian land under the proposed new restricted area." Not in any meaningful way. Several Native leaders and others visited the excavation of a site within the BAX area, indicating a more than superficial interest.

7. "Army is consulting with the Alaska SHPO and potentially affected Alaska Native tribes, ANCSA corporations, and tribal government entities" but not knowledgeable cultural resource specialists within the State.

3.4 EXPAND RESTRICTED AREA R-2205, INCLUDING THE DIGITAL MULTI-PURPOSE TRAINING RANGE (DEFINITIVE)

1. "this action...involves no ground-disturbing construction." But it also says "other than surficial ground disturbance associated with ground maneuvers of vehicles," It is exactly this vehicular traffic that is potentially destructive to shallow deposits of archeological value.

2. It is interesting that some of the oldest and most productive archeological sites in interior Alaska are located immediately adjacent to YTA (Broken Mammoth, Mead, and Swan Point sites). This should make YTA much more sensitive to cultural resource possibilities than is presently the case.

3. Statements regarding noise impacts and Native consultation have been commented upon (and condemned) previously. Programmatic Actions "Prior to implementation of any element of this proposed action, the Army would comply with NHPA Section 106, including identification of historic properties, and assessment and resolution of adverse effects" As long as this is done, there is no present need for comment. The "obsession" with noise impacts on cultural resources is stupid.

Appendix H. Cultural Resources The list of references(N=2)) is laughable. I can only assume that this Appendix has not been finished.

| I0160 | Ward Hurlburt IV | Owner | Forward Services | Purpose/Need, All resource areas, Safety (Airspace), All proposed actions | I recognize you are here to protect us, and need the practice. You already have far more than enough room in our great State of Alaska. Please don't Federalize even more. Years ago I was flying ANC to FAI, came over a ridge before the flats headed north into FAI, and found myself head on with an A10. I jinked to the right, and found myself head on with another A10. If you grab more airspace you will be causing that sort of incident to happen even more between us civilians or civilian on military. By the time you kill a few civilians, you will have lost quite a bit of goodwill you now enjoy in our great State. Your airspace grab is just not worth even one civilian life. Years ago I also watched F4's scorch the tundra, and caribou tails, out in the Naknek MOA. You can still do that with the space you have! |

| I0162 | marvin
peterson | | | General (to the EIS),
Airspace Management,
Noise, Safety (Airspace), 1 -
Fox 3 Military Operations
Area (MOA) Expansion and
New Paxon MOA | IPARCS is not good for the Matsu valley. There is already a lot of air traffic in the entire region. The triangle between Anchorage, Fairbanks and Tok is a very busy place for low-level general aviation. The additional low level maneuvering can only increase the risks and when the speeds are factored in, the multiplied chances for a mid-air are increased by a tremendous amount. If these areas are closed for low-level hi-speed military training the negative impact on local use will be substantial. I am an ardent supporter of the military as I have worked in the military or for the military for 40 years. However, there are other options for the military training area. Areas where the local air transport for training, commuting, recreational flying, hunting, fishing and myriad other uses of the airspace are not nearly as busy or widespread. The local wildlife will also undoubtedly be affected in a negative way by the noise and low-level activity of military training. Please reconsider this proposal and relocate the training area to a less densely populated area. The safety and livelihoods of too many Alaskans and tourists to our beautiful region will be adversely affected by the current proposal. Thank you Marvin Peterson Willow, AK |

ALCOM Public Affairs
9480 Pease Ave. , Suite 120
JBER, AK 99506

To Whom It may Concern:

My family and I strongly oppose the taking of our recreational lands on the highway system for Military training for aircraft . The Federal Government already has control of vast amounts of lands in Alaska and will not let the public use a big percentage of it.

I am not against the military but, let the public have some land to play on too.

Sincerely,

Patrick O'Connor

Subject: JPARC EIS Comments

(Please find below my comments on the JPARC EIS. I tried to submit them via the website, but received a phone message that there was a problem with my submission. If you could acknowledge that you received my comments this time, I would appreciate it.)

Dear ALCOM Public Affairs:

This letter concerns the proposed Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA as analyzed in the Joint Pacific Alaska Range Complex Modernization and Enhancement Environmental Impact Statement (JPARC EIS). With regard to these areas, I support the no action alternative. The proposed actions will negatively impact many residents of Alaska, including but not limited to those living in rural communities in the area. The subsistence impact analysis is seriously flawed and consequently the EIS fails to accurately describe or assess the impact that the proposed actions will have on residents of many rural communities that rely on resources in the Fox 3 MOA (including the proposed expansion) and the proposed Paxon MOA. The mitigation measures proposed for the action alternatives are inadequate and would need to be enhanced if you move forward with an action alternative.

Another reason to reconsider the expansion of the Fox 3 MOA and creation of the Paxon MOA is the ongoing problems with F-22s, which account for a significant number of the proposed flights. Safety issues with these planes need to be resolved before plans are made for expanding their use in military training exercises.

The subsistence analysis for the Fox 3 MOA Expansion and New Paxon MOA is seriously flawed in three substantive areas and should be thoroughly revised before any decision is made to move forward with an action alternative.

First, limiting the subsistence analysis to eight communities within 20 miles of the MOAs does not accurately represent patterns of resource use and distribution in the Nelchina Basin/Copper Basin area. Many communities beyond those addressed in the analysis rely on resources in the impacted areas and consequently will be negatively impacted by the proposed actions. Resources are spread across the local landscape, and we go to where the resources are. Sometimes that means driving more than 20 miles. For example, I live in Copper Center, one of the rural communities excluded from the analysis, and I pick blueberries every year in the proposed Paxon MOA. I do so because I haven't found a good blueberry patch closer to home. Several of my friends similarly live in communities not included in the analysis, such as Tazlina and Kenny Lake, but hunt caribou in the impact area. Instead of the handful of communities included in the current analysis, the analysis should be expanded to all those communities with a positive customary and traditional use determination (C&T) for moose, caribou or both on lands within Game Management Unit 13 (and any other GMUs that fall within the Fox and Paxon MOAs) under the Federal Subsistence Program. In contrast to the seemingly arbitrary 20 nautical mile rule, customary and traditional use determinations are based on an analysis of all available data regarding patterns of resource use. In what follows, the phrase "potentially affected rural communities" refers to the communities that have C&T for moose or caribou in the MOAs.

Second, twenty plus year old community harvest data is woefully inadequate for making decisions that affect people's livelihoods. (It is clear that your "most representative year" is actually the most recent year for which comprehensive subsistence survey data are available.) As an example, when the community harvest studies were done in the 1980s, local residents could hunt caribou in Unit 11, but now that area is closed to caribou hunting due to conservation concerns and they must now travel to the area of the Fox and Paxon MOAs if they want to hunt caribou. JPARC should follow the lead of the Alaska Gas Pipeline Project and base its analysis on

I0164

updated comprehensive community subsistence data, providing funding to support updated surveys where needed and waiting for the new data where updated surveys are already underway. (The Susitna-Watana Hydroelectric Project is similarly considering the need to conduct updated comprehensive subsistence surveys as part of its planning process.) As a first step, the list of potentially affected rural communities (as discussed above) should be examined in terms of when the most recent comprehensive harvest survey took place and whether an update is scheduled in the next year or two. For those potentially affected rural communities that are five or more years out from the most recent update and not on the list for an update, funding should be provided to the Alaska Department of Fish and Game Subsistence Division or a similarly qualified independent organization to collect this information. A decision on the project should be delayed until up-to-date subsistence information is available for all of the potentially affected rural communities, to allow it to be incorporated into the subsistence impact analysis.

Third, limiting the communities with high dependence on subsistence to only those with majority Alaska Native populations is problematic and fails to recognize the importance of subsistence to other local residents. While it is appropriate for predominately Alaska Native communities to fall in the "high dependence" category, there are other rural communities in the area that should also be classified as such. Once up-to-date information is obtained regarding the harvest and use of subsistence resources (as described in the previous paragraph), this question should be revisited for all the potentially affected rural communities. Communities where more than about 80 percent of the households report using subsistence resources should be classified as high dependence regardless of the community's composition.

In the event that an action alternative is selected, the mitigation measures for the proposed expanded Fox 3 and new Paxon MOA need to be expanded beyond those listed in the EIS in order to lessen the significant impacts that these alternatives will have on subsistence activities and resources.

The proposed period for no military flights is not adequate. Short seasons and unpredictable availability of resources in accessible areas mean that it is not realistic to ask local residents to schedule their subsistence activities at times when military activities are not occurring. Instead, military activities need to be scheduled at times that do not conflict with subsistence activities in order to avoid a significant impact on subsistence. Berry picking is an important activity that occurs within late July and August, while moose and caribou seasons in Unit 13 also start in early August. March is another important time for hunting caribou for local residents. There should be no military flying exercises during August, September, and March. In addition, in May, June, July and October, the minimum flight level should be 5,000 AGL to avoid conflicts with general aviation aircraft and subsistence activities during the summer recreation and fall hunting seasons. These restrictions should apply to all branches of the military because it doesn't matter to the wildlife who is flying the plane.

Holding a few community meetings is not adequate to monitor the impact of the proposed activities on subsistence. Another round of comprehensive community harvest assessments should be done approximately five years out, with funding from the federal agencies involved in JPARC, and compared to the information that is currently being collected. Funding should also be provided for surveys to monitor the impacts to wildlife resources. This monitoring could be done in cooperation with federally recognized tribes and other Alaska Native organizations.

The list of communities notified about and consulted with regarding the proposed activities should be expanded to include all those with a positive customary and traditional use determination through the Federal Subsistence Program for moose, caribou, or both, in Game Management Unit 13 and any other GMUs that overlap with the MOAs. For those communities with federally recognized tribal governments, the consultation should occur on a government to government basis.

Thank you for the opportunity to comment.

Sincerely,

I0164

| I0165 | Michael Koskovich | Captain Boeing 747-400 | Atlas Air | Cumulative Impacts, All resource areas, Airspace Management, Noise, Safety (Airspace), Land Use, All proposed actions | I very strongly feel that you should NOT extend these MOA's into area's that have road access. There is very limited road access in Alaska. You propose to incinge upon public domain that is used by many citizens for hunting, fishing, snowmachine activity, trapping, mining and other recreational activity. There already exists, thousands of square miles of MOA's that are under utilized. These areas (Stony, Galena, Naknek) have no road access, and are far more suitable for your requirements with significantly less impact on the general populace. As a professional pilot, a recreational pilot and a long time Alaskan, I STRONGLY OBJECT TO THIS PROPOSITION! I know many people in this state, and thus far know of NOT ONE that approves. Michael J. Koskovich |

| I0166 | Doyle Ruff | | | General (to the EIS), Cumulative Impacts, Airspace Management, Safety (Airspace), Socioeconomics, All proposed actions, 1 – Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 – Battle Area Complex Restricted Area Addition , 4 - Expansion of R-2205 Restricted Area | The thinking of the USAF leadership for the JPARC proposal is nonsensical. The USAF does not need the expansion under this proposal OR to gain any approval that would force non-military and non-emergency aircraft to a maximum 500' AGL restriction throughout said expansion area. The State of Alaska has dire dependency upon civil aviation, both IFR and VFR, throughout the entire state. The State of Alaska, aviation-wise, is about the civil AND the military side. It is not just about the USAF side. The USAF must compromise on this proposal to an alternative that is acceptable to Alaska civil aviation including the AOPA and Alaska Airmen's Association. Doyle C. Ruff Colonel, USAF (Ret) Former Commander Eielson AFB |

| I0167 | George Hobson | | | Safety (Airspace), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 - Battle Area Complex Restricted Area Addition, 6 - Unmanned Aerial Vehicle (UAV) Access | The lowering of the MOA floor to 500ft in an area where there is heavy use of general aviation is a big hazard. If there was a continued radio channel like around FAI this would help but not eliminate it because not all small planes have radios. Restrictions around Delta and Isabel Pass are already a problem in poorer weather. Farther restrictions would effectively close the pass most of the time. Allowing UAVs in the crowded airspace around FAI before the FAA comes up with rules of operation and see and be seen is a midair waiting to happen. Please hold off on this till the rules are set or move it all to the Delta controlled area. |

|--------------|-------------|---------------------|--------------|---|---|
| I0168 | Gary Wegner | Airman Second Class | None | General (to the EIS), Airspace Management, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 6 - Unmanned Aerial Vehicle (UAV) Access | <p>The proposed expansion of the Fox 3 MOA intrudes both laterally and vertically in to an area of Alaska highly used by the general public. Expanding a MOA to within 30 miles of Alaska's fastest growing populace is precarious. The Mat-Su Valley is home to over 230 landing areas and to over 2,000 of Alaska's general aviation pilots. The Lake Louise recreation area is one of the most frequented destinations for all Alaskan's who enjoy hunting, fishing, hiking, boating but most importantly for the quiet and pristine outdoor experience. Military aircraft traveling in excess of 500kts and/or 500' would not only endanger civil aviation traffic but destroy Alaska's quintessence. The same argument applies to the Paxson MOA Low Altitude proposal. This area is a major VFR route connecting northern Alaska with the south central and eastern regions of the state. Variable weather in this area eliminates the discussion of corridors that would create congested, unsafe situations for aviation traffic. MOA's today prohibit IFR access by civilian aircraft during exercises. This not only affects the economic viability of communities with and outside of these areas but history shows it has been difficult even obtaining access during emergency situations. This results in an even bigger concern: the loss of safety for VFR operators who are being encouraged to use low-level civil corridors. If larger, IFR capable aircraft are forced to use the VFR corridor during these exercises, this puts these larger, faster aircraft on the same flight path as our smaller general aviation aircraft at low altitude, which is a loss of safety for all civil operators. We oppose any additional airspace that hinders IFR traffic and the negatively impacts our communities. Five years ago the Alaska Airmen participated in an EIS process that resulted in the building of the Battle Area Complex south of Delta Junction. One of the concerns at the time was the possibility of restricted air space over the complex. We were assured that this would never be a requirement. Our position has not changed even though the military's planned use of airborne weapons release has changed. We oppose restricted airspace over an area where weather, terrain, and mountain passes creates a challenging and potentially unsafe situation.</p> <p>The proposals to establish more restricted airspace for live ordnance delivery further impacts the Fairbanks, Delta Junction areas and north even more. Again, the areas affected are accessed by Alaskans utilizing these areas for mining, hunting and recreation. Existing restricted areas already have a negative impact to civilian communities. We understand Unmanned Aerial Vehicles are the future and that the military would like to integrate these into their training.</p> |

I0168

Corridors allowing UAV's to access training areas is an enormous safety concern. Currently the National Airspace System does not have a mechanism that allows UAV's to harmoniously fly and communicate in the same airspace as civil aircraft. Until true sense and avoid capability is defined and developed we need to side with safety and oppose these corridors as proposed. Alaska already has one of the largest areas of airspace in the world secured for training. The Alaska Airmen's Association supports our military and understands the need for training; however we are concerned for other users of this airspace. Through the scoping and public meetings it was explained that the military needed such low altitudes and expanded areas in order to train for existing and future threats to the 5th generation fighters and to train with new weapons systems. It was also stated that this redesign was based on saving transient time and fuel to reach the training areas. While not part of this proposal, we ask the military to look at all Alaska airspace they currently hold and release airspace that is not being effectively utilized. We also question the reasoning and claims for the proposed F-16 move to JBER as they seem to contradict the motives of the JPARC redesign. We do know that improved and consistent communication that includes real-time information for pilots sharing this airspace needs to occur. Implementing a statewide Special Use Airspace Information Systems (SUAS) as well as improving the existing service are essential to operating an airspace complex of this size. Radio coverage and communication remains unreliable in the eastern areas of the current complex. Beside improvements to the current program, we would like alternatives to be explored for communicating the status of the MOA's improving access in the ranges for civil aircraft when not in use. We ask that the floor of current and proposed airspace be determined based on communication coverage for SUAS.

|--------------|-------------------|-------|--------------|--|---|
| I0169 | Maureen Chambrone | | | General (to the EIS), Purpose/Need, Cultural Resources, All proposed actions | <p>I have lived in Alaska for 16 years, based primarily out of the Susitna Valley and the Fairbanks area. I am for ABSOLUTELY NO ACTION on ALL of these proposals. We do not need to enhance and modernize the military; if anything, we need to decrease the current military activity which is already too extreme. With a faltering economy, huge national debt, and dwindling resources (e.g. oil) we cannot support the excessive, expensive behavior of the U.S. military. Alaskans need to protect this last frontier we have from further bombardment of excess military activity. Alaska has a special place in Americans' hearts as a last vestige of wilderness, wildlife, and a wild spirit that has gone extinct in the rest of the nation. Alaska is a last vestige of remote wilderness. Wilderness includes air and sound space. Further expansion of military activity does not support the wilderness spirit.. The United States military is a cancer that is rapidly sickening our nation, not to mention many other nations such as Iraq and Afghanistan. The military exists only for itself and the mega-corporations that make and sell the weapons, planes, helicopters, tanks, drones, and all the other equipment. It has failed to look out for the American people, to serve as a protector from other potentially aggressive nations. Instead, the U.S. military is beating its chest at the rest of the world and stirring up aggression and further threatening the peace of our own nation, not to mention the peace of the world. Where is this so called advanced weaponry getting us besides making complete fools out of ourselves. The U.S. military drags out every mission they set out to accomplish, kill more innocent people than guilty, make us look as bad, if not worse, than the bad guys we're trying to eliminate. It didn't take an F22 and other modern, enhanced technology to find Saddam Hussein or Osama bin Ladin. It took intelligent courageous men to find them, sneak up on them and arrest or kill them. If the U.S. military wants to increase training and create stressful scenarios for potential wars, then they should get the men off their butts, tear them away from their computer and radar screens, yank them out of their cockpits and plop them down in the middle of the wilderness living with minimal technology and using their senses and working together to become tough courageous men ready to face the potential challenge of other threatening nations and people.</p> <p>Alaska is a prime place for this kind of training, especially joint training. Groups of army, air force, and navy men on their feet traveling through the wilderness working together to solve problems and find the hidden imaginary enemy in a cold dark canyon or in a cave in the mountains. Most of our real life enemies (e.g. Osama bin Ladin) are on the ground using their brains to elude us, not in an F22 like the role playing Red Flag Alaska games. I propose an alternative not listed here. It would save vast amounts of tax payers money. Park all the F22s, F16s, drones, and other technology, but leave just enough in training for defending our country.</p> |

I0169

Get the men training jointly on their feet, trekking through swamps and up mountains, create scenarios where men learn to sneak up on enemies, teach them diplomacy, how to defend themselves in hand to hand combat, teach them to use their senses rather than rely on technology, teach them to only kill when absolutely necessary. Maybe then they could tell the difference between innocent civilians and the actual bad guys. They can't do it up in the sky screaming along at hundreds of miles an hour. There's already plenty of technology. The U.S. military should use what it has already wasted taxpayers' money on and not act like a spoiled rich kid having to have the latest newest toy. We can save resources and money by just sticking with what we have. What other countries have this kind of technology? Iraq and Afghanistan sure don't but our technology sure didn't just win the war. Those countries, and the terrorists, use creativity to hold their own against us. As all of the long drawn out wars of the 20th and 21st century have proven (e.g. Vietnam, Iraq, and Afghanistan) more modern enhanced technology never allowed this nation to go in and get the mission accomplished in a short time. With our supreme technology we've just made complete fools out of ourselves. What's missing from this EIS is the effect modernization and the military, in general, have on the spirit of Alaska. This is extremely important. Our airspace should not just be a free for all. You can't have wilderness and so called wild and free rivers on the ground and not include the airspace. Fighter jets flying over the wilderness can completely ruin a person's experience on the ground and affect their sanity. I know from first hand experience being right under the flight path for all fighter jets leaving Eielson. We're down on the ground just living a peaceful life while the aggressive military is training to provoke other nations. Our peace is affected in two ways. In the long-term from other countries disgruntled by our cocky country and, immediately, from all the noise. The noise from these jets is excruciating. The stress is intense; it strains relationships. Our quality of life is diminished. We need to promote peace, not war. Peace is cheaper than war.

Alaskans gave the military an inch during World War II when it was rightly justified for defense. But they've taken it miles ever since and turned this state into an aggressive, offensive training grounds. The growth of the military in Alaska along with resource extraction industries, which the military heavily depends upon, has led to a lower quality community in Fairbanks. The so called economic growth that has resulted also resulted in a decrease of local shops and a huge increase in Box Store counterculture. Most old timers will tell you, and many short timers as well, that this place just isn't what it used to be. There's also too much hunting pressure coming from the military who don't even need the meat and there's too many stories of unethical military hunting behavior.

I0169

I0169

Expansion of the military in general will result in a further expansion of lower valued people and community. The people who came to Alaska to live a simpler way of life away from the stifling congestion and development of the lower '48 are an important part of Alaska's history and culture even though they may be in the minority. Wilderness and subsistence is an important part of this culture. With the death of wilderness comes the death of a lot of people's spirits. MOAs do not equal wilderness. What little bit of uncluttered, minimally encroached environment that this state has left should be left intact for the benefit of future generations. This includes air and sound space. In these days of ridiculous national debt there is no better time to reduce military technology. Stop giving money to the big multinational corporations making the military technology. Stop using up all of our oil and metals (the extraction of which results in further loss of wilderness) to keep making more modern and enhanced military technology. The military is one of the number one consumers of natural resources such as oil. At the rate we're going we will run out of these resources soon enough. Let's stop now, halt the modernizations, quiet Alaska's air space, let the caribou feed in peace, let the people who came to Alaska for wilderness and subsistence opportunities carry on their peaceful activities, and those who peacefully existed here already for thousands of years continue to do so. Please, absolutely NO ACTION on all proposals. Alaska is a prime place for this kind of training, especially joint training. Groups of army, air force, and navy men on their feet traveling through the wilderness working together to solve problems and find the hidden imaginary enemy in a cold dark canyon or in a cave in the mountains. Most of our real life enemies (e.g., Osama bin Ladin) are on the ground using their brains to elude us, not in an F22 like the role playing Red Flag Alaska games. I propose an alternative not listed here. It would save vast amounts of tax payers money. Park all the F22s, F16s, drones, and other technology, but leave just enough in training for defending our country.

Get the men training jointly on their feet, trekking through swamps and up mountains, create scenarios where men learn to sneak up on enemies, teach them diplomacy, how to defend themselves in hand to hand combat, teach them to use their senses rather than rely on technology, teach them to only kill when absolutely necessary. Maybe then they could tell the difference between innocent civilians and the actual bad guys. They can't do it up in the sky screaming along at hundreds of miles an hour. There's already plenty of technology. The U.S. military should use what it has already wasted taxpayers' money on and not act like a spoiled rich kid having to have the latest newest toy. We can save resources and money by just sticking with what we have. What other countries have this kind of technology? Iraq and Afghanistan sure don't but our technology sure didn't just win the war.

I0169

I0169

Those countries, and the terrorists, use creativity to hold their own against us. As all of the long drawn out wars of the 20th and 21st century have proven (e.g. Vietnam, Iraq, and Afghanistan) more modern enhanced technology never allowed this nation to go in and get the mission accomplished in a short time. With our supreme technology we've just made complete fools out of ourselves. What's missing from this EIS is the effect modernization and the military, in general, have on the spirit of Alaska. This is extremely important. Our airspace should not just be a free for all. You can't have wilderness and so called wild and free rivers on the ground and not include the airspace. Fighter jets flying over the wilderness can completely ruin a person's experience on the ground and affect their sanity. I know from first hand experience being right under the flight path for all fighter jets leaving Eielson. We're down on the ground just living a peaceful life while the aggressive military is training to provoke other nations. Our peace is affected in two ways.

In the long-term from other countries disgruntled by our cocky country and, immediately, from all the noise. The noise from these jets is excruciating. The stress is intense; it strains relationships. Our quality of life is diminished. We need to promote peace, not war. Peace is cheaper than war. Alaskans gave the military an inch during World War II when it was rightly justified for defense. But they've taken it miles ever since and turned this state into an aggressive, offensive training grounds. The growth of the military in Alaska along with resource extraction industries, which the military heavily depends upon, has led to a lower quality community in Fairbanks. The so called economic growth that has resulted also resulted in a decrease of local shops and a huge increase in Box Store counterculture. Most old timers will tell you, and many short timers as well, that this place just isn't what it used to be. There's also too much hunting pressure coming from the military who don't even need the meat and there's too many stories of unethical military hunting behavior. Expansion of the military in general will result in a further expansion of lower valued people and community. The people who came to Alaska to live a simpler way of life away from the stifling congestion and development of the lower '48 are an important part of Alaska's history and culture even though they may be in the minority. Wilderness and subsistence is an important part of this culture. With the death of wilderness comes the death of a lot of people's spirits. MOAs do not equal wilderness. What little bit of uncluttered, minimally encroached environment that this state has left should be left intact for the benefit of future generations. This includes air and sound space. In these days of ridiculous national debt there is no better time to reduce military technology. Stop giving money to the big multinational corporations making the military technology. Stop using up all of our oil and metals (the extraction of which results in further loss of wilderness) to keep making more modern and enhanced military technology.

I0169

I0169

The military is one of the number one consumers of natural resources such as oil. At the rate we're going we will run out of these resources soon enough. Let's stop now, halt the modernizations, quiet Alaska's air space, let the caribou feed in peace, let the people who came to Alaska for wilderness and subsistence opportunities carry on their peaceful activities, and those who peacefully existed here already for thousands of years continue to do so. | I0170 | Becky Schwanke | | | Cumulative Impacts, Airspace Management, Safety (Airspace), Biological Resources, Land Use, Socioeconomics, Subsistence, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Thank you for the opportunity to comment on this DEIS. The review thus far has failed to effectively describe the impact on the incredible number of users in this extremely popular year-round recreational area. Leaving the Paxson area as is, and leaving the Fox 3 MOA above 5000 ft. is the only viable, realistic, safe option. Saving fuel so that the joint bases can train in the Nelchina-Oshetna-Lake Louise-Gulkana-Paxson-Denali Highway region is absolutely ludicrous and should never have been recognized as a valid rationale for the proposed changes listed in the DEIS. The wildlife resources in this area provide valuable subsistence and socioeconomic opportunities to over 10,000 Alaskan hunters and gatherers each year. The extensive trail system in Game Management Unit 13 is testament to this fact - the EIS must consider this extensive system in order to fully grasp the extent of the summer and fall use. The waterways provide additional summer transportation, as well as snow in winter. The trapping, fishing, and hunting interest in this area is unparalleled in the state, and this area is so popular for the very reason JPARC is interested - it's in the middle of the 2 largest urban areas of the state. Pilots look down and see trees and water, we all look up and see and hear pilots training all year. At this point the existing Fox 3 MOA is compatible with area uses and has no effect on the wildlife resources. With a 500ft ceiling, the aerial wildlife monitoring in this area will be seriously impacted, and without the highest quality data, subsistence opportunities will be curtailed for the sake of conservative management. That's what happens when biologists don't have the best quality data - subsistence harvest opportunities will be cut drastically. The DEIS failed to acknowledge this. The Nelchina Caribou herd as well as moose in the Nelchina-Copper river basins are managed under the state's intensive management law, meaning the harvest must be maximized annually for the benefit of Alaskan subsistence hunters. The state has thus far done an excellent job bringing these populations back up to the point where they can sustain the incredible hunting pressure from Anchorage, the valley, and Fairbanks, among others. Expanding the Fox 3 MOA and establishing a Paxon MOA would have detrimental effects on the monitoring as well as the use of these wildlife resources. While monitoring occurs from May - November (daily or weekly depending on the season), hunting occurs throughout August, September, after October 21st, November-March. There is no avoiding the critical management or harvest periods. There are simply too many people reliant on these resources to risk them by bringing in joint military training missions. Maintaining the safety of our biologists, hunters, and other locals and recreational flyers was sorely missed in the DEIS.</p> |

I0170

You obviously are not aware of all the time periods when people are out there flying in small fixed wing aircraft. First thing in the spring March-April there are considerable numbers of people flying out to their recreational cabins. There are also a number of pilots out pursuing fur bearers and wolves in the area, and following tracks from a fixed-wing makes these small planes extra vulnerable to impact and wake turbulence from the large fast flying jet aircraft. From April-May pilots are out tracking bears for later pursuit by hunters as well as for biologists attempting population estimates. In May moose and caribou are surveyed for parturition (calving), a very important piece of data for sustainable wildlife management. In June and July the Nelchina Caribou Herd must be counted annually - it is extremely weather dependent and usually occurs from 25 June - 10 July. This count entails using 3-5 small fixed wing aircraft covering the eastern Talkeetna mountain foothills counting caribou all day, followed by a composition flight in a small helicopter. Sheep surveys occur throughout June and July, weather dependent. Hunting starts August 1st for federal moose and caribou hunters, and the caribou hunting season runs through the end of March. Trapping ramps up November and runs through February - many are on snowmachine but many use small aircraft. Recreational snowmachine riding ramps up from February-April, during the same time that biologists are flying snow surveys in small aircraft. There simply is no good time for large numbers of jet aircraft to be flying around in this region at 500 ft. period. You will kill somebody, then it will probably happen again. It could be me - I spend a tremendous amount of my time in small aircraft throughout the Nelchina-Copper River basin yeararound. The actual effects on wildlife are yet to be determined regardless of how many short jet-overflight studies the AK military has funded. The short term overflight studies of caribou and sheep during random periods has no bearing on the reality that the proposed 500ft ceiling in these MOAs will cover the calving grounds of the Nelchina Caribou Herd (the heaviest harvest of any Alaskan caribou herd) and substantial Dall's sheep habitat in the eastern Talkeetna and Chulitna Mountains. Overflights for a week or more during training exercises, especially as jets have gotten larger and louder than all past Alaskan overflight studies, will severely curtail the effectiveness of caribou and sheep to graze and evade predation.

I0170

I0170

Caribou and sheep do not like continuous disturbances, read S. Wolfe's M.S. thesis from UAF per the shift of the Central Arctic Caribou Herd following establishment of Prudhoe Bay. That herd was lucky - they had adjacent areas that they could move to that were of equally high quality. The Nelchina Caribou herd has no adjacent high quality habitat to move to. If JPARC training missions occur over their calving areas at 500', we can be guaranteed the Nelchina Herd will abandon their preferred calving range. The reality is this isn't a short 1-2 week period the military can avoid - caribou remain on their calving range for up to 2 months during summer.

When they shift away from this preferred area in the foothills of the Talkeetna mountains, you will see increased mortality on calves just as the Porcupine Herd saw in years they calved adjacent to their preferred calving grounds in the 10-02 area on the north slope. We have a fantastic management program in place for Nelchina Caribou, having harvested over 50,000 caribou from the herd in the last 25 years. The military will not fare well with the weight of destroying the productivity of the Nelchina Caribou Herd on its shoulders. It is not a matter of if this will happen, it's a matter of when, how soon after the jets start training here. If this is the price to pay for training cost savings, I have severely misjudged our Alaskan military. Do the right thing, use Stony River, or develop a different area out west or up north for use for low level mountainous training. This area is already too well developed and sustains a tremendous subsistence and socioeconomic benefit to Alaskans - a lower ceiling in this area is a death sentence to the basin as well as to the first few people that get killed. Sincerely, Becky Schwanke

| I0171 | Michael Raffaeli | | | General (to the EIS), Purpose/Need, All resource areas, Airspace Management, Noise, Physical Resources, Water Resources, HAZMAT, Biological Resources, Cultural Resources, Land Use, Infrastructure and Transportation, Environmental Justice, Air Quality, All proposed actions | The no action alternative should be chosen. Do not turn Alaska's landscape, the last surviving continuous wild lands in America into a training ground. Wild and Scenic Rivers have been already designated and the power to maintain the qualities of wild lands should be adhered to. Recreation, hiking, canoeing, river rafting, hunting, and fishing are why people come (and stay) in Alaska- these resources need to be maintained and foster pride and patriotism in America. There is not enough oversight in these proposed actions to protect the biological, physical, and cultural resources- clean water, wildlife (especially bird populations and migrations), solitude, quiet, open lands that we as Americans are allowed to access without restrictions from the military- that Alaskans value, that I as an Alaskan value. I do not want to give our military a larger blank admission to ruin America's greatest legacy- our land. |

|--------------|---------------------|-------|--------------|---|---|
| I0172 | Miranda Terwilliger | | | General (to the EIS), Description of Proposed Actions and Alternatives (DOPAA), Cumulative Impacts, Mitigations, All resource areas, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA | <p>Dear ALCOM Public Affairs: This letter concerns the proposed Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA as analyzed in the Joint Pacific Alaska Range Complex Modernization and Enhancement Environmental Impact Statement (JPARC EIS). With regard to these areas, we support the no action alternative. The proposed actions will negatively affect many Alaskans, rural and urban who use this popular area for subsistence and recreation. We feel that the analyses created for this EIS are both flawed and dated. Much of the data does not really include all of the communities impacted by this area - for example we are subsistence berry pickers and caribou/ moose hunters in the area as are many in our community but it, Copper Center, was not included. We also recreate in the area in the summer, enjoying wildlife watching and camping. Such experiences have been badly disrupted by a passing helicopter, we can only imagine the impact of low flying military aircraft. The subsistence data used is particularly appalling data given the data used in several similar EIS's that are ongoing in the area (the Suisitna Dam and the Alyeska Gas Pipeline Project). These projects paid for the collection of the data that was missing. It seems that the federal government who holds those other projects to such standards should do no less. Friends of ours as far as Fairbanks and Anchorage are active users of the area as well and it is one of the more popular tourist areas. This aspect was not addressed in the EIS. In the event that an action alternative is selected the mitigation measures for the proposed expanded Fox 3 and new Paxon MOA need to be expanded beyond those listed in the EIS to properly address the impacts to subsistence activities and resources as well as wildlife and recreation and a substantial monitoring program needs to be in place to insure that the mitigation measures are successful. In particular we think it is unreasonable for subsistence activities to be adjusted around flight schedules when they involve uncertain and differentially distributed resources. Thank you for the opportunity to comment. Sincerely, Miranda Terwilliger & Todd Stoeber/ July 2012</p> |

|--------------|-------------------|-------|--------------|--|---|
| I0173 | Jennifer Raffaeli | | | General (to the EIS), All resource areas, All proposed actions | Please choose the No Action alternative. There is too much at stake if we open these lands to military training. The benefits do NOT outweigh the potential risks and losses at stake in terms of the value of these lands as natural resources, wildlife habitat, places to enjoy wild and scenic rivers, solitude and freedom. The military does not have an effective means in place to mitigate the impacts that their training exercises would have on these lands and the animals and people that depend on them. |

| I0174 | Patrick Shier | Owner Member | 9295 Tango LLC | General (to the EIS), Airspace Management, Safety (Airspace), 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxon MOA, 3 - Battle Area Complex Restricted Area Addition , 4 - Expansion of R-2205 Restricted Area , 6 - Unmanned Aerial Vehicle (UAV) Access | Thank you for the opportunity to comment. I often fly a private single engine seaplane in proximity to various MOAs as I transit from Southeast Alaska to the interior, between Fairbanks and Glennallen, and west of Anchorage to and from a remote cabin on Telaquana Lake. I appreciate the value of the unique training opportunities presented by the wide open space found in Alaska. I also appreciate the positive economic impact of exercises held in these locations. I would ask the planners to consider raising the floor of areas adjacent to transit areas, mineral developments, and common recreation routes, particularly in the summer months. Raising the floor to something like 2000ft AGL would create less congested VFR corridors, reduce the risk of in flight collisions, and retain safe access to covered locations. Thank you. |

|--------------|--------------|-------|--------------|--|---|
| I0175 | Brian Napier | | | General (to the EIS), Noise, Biological Resources, Land Use, Socioeconomics, 1 - Fox 3 Military Operations Area (MOA) Expansion and New Paxson MOA | <p>To whom it may concern, I am writing to express that I prefer the no action alternative for the JPARC Modernization and Enhancement EIS. As a resident of the Denali Borough I live, recreate and subsist off of the lands in and adjacent to the proposed JPARC expansion. I am particularly concerned with the Fox MOA and the Paxson MOA proposals. The Bureau of Land Management (BLM) considers the area, included in the Fox and Paxson MOA, "A historic glimpse into the Last Frontier-wilderness in all directions." The BLM also, describes the Tangle Lakes area within the possible Fox MOA expansion, as a place to imagine and appreciate the past, and also a wonderland for outdoor activities. The EIS for the JPARC expansion suggests that the JPARC will not interfere with other agency functions or missions in the lands possibly added in an expansion. I see little in the way of compatibility between a MOA and a Wild and Scenic River, such as the Gulkana River a BLM managed site, even if the sound intrusion will only occur for approximately 60 days. The JPARC EIS is obviously very comprehensive in scope and depth. I appreciate that there is a lot of time and attention that has been paid to this proposed expansion. However, in regards to possible wildlife impacts, such as sheep nurseries, caribou calving grounds, migratory bird breeding grounds and stopover sites, there are no monitoring standards or plans in the EIS for assuring that wildlife are not adversely affected by sound intrusions and increased air traffic. By not having critical indicators, such as mortality and reproductive rates, identified in the EIS there is no immediate accountability by JPARC for changes in wildlife populations in the JPARC expansion. Simply stating that JPARC will avoid calving grounds, sheep nurseries, and bird migratory routes, leaves too much room for interpretation and lack of accountability in the end for negative impacts. Similarly, I have concerns that JPARC has discounted the recreational community and tourism industry that uses the areas in the Fox and Paxson MOA. As stated above, there is little in the way of compatibility in a wildland being considered for heavier military use and destination for outdoor enthusiast, recreational hunters, subsistence users, just to name a few.</p> <p>While the JPARC EIS considered sound and social impacts from sonic booms and sound intrusions, it picks sound levels based on urban areas and seemingly brushes off social impacts as annoyances. Similar to the disappearance of stars from the night sky in urban areas due to light pollution, the disappearance of a wild landscape is closely behind the night sky. A wild soundscape is a precious resource and one many residents and visitors to the State of Alaska experience and should be able to experience on for years to come. I appreciate that the military is attempting to create a more energy efficient and realistic training ground through the JPARC expansion in order to meet operational goals and environmental standards.</p> |

I0175

However, the areas identified for heavier training use and other newly added lands are more than just maneuvering grounds. They are wildlands for recreation and rejuvenations a dwindling resource, the world over. The lands proposed for addition to JPARC are important breeding grounds for wildlife, they are peoples homes and subsistence livelihoods. Additionally third behind, commercial fishing and oil and gas industry, tourism is an economic engine for many of the areas included in the Fox and Paxson MOA, including Tangle Lakes, Gulkana Wild and Scenic River, McClaren River to name a few. The dollars spent in the surrounding communities and the communities servicing travel to these destinations greatly benefit and rely on this very important renewable resource. Thank you for your time. Sincerely Brian Napier Denali Borough Resident

I am a general aviation and professional pilot in Alaska for 37 years and I have a son who flies in the military in Alaska and I oppose the expansion of the Fox 3 and Paxon MOA due to safety concerns for mid-air hazards with general aviation users. These areas have high-density general aviation traffic. As a professional airline pilot utilizing Alaska's airspace, I'm extremely concerned about the potential hazards of the UAV corridors near Fairbanks. These corridors have the potential to have a significant safety impact on my job as an airline pilot.

I and many others have cabins on the Wood River, to get to it I fly from North Pole and skirt around the Blair MOA; I see in the Proposed Action-6 they want to add an Unmanned aircraft training corridor; my question is if this corridor is hot will I have to go around it or under it? If yes to go around it t not under it then I have to fly all the way around Fairbanks and up the Wood River taking more than double/triple the time and fuel. If I can go under it no problem. There are many of us that use this route to get to our cabin and many commercial outfits flying this route to Gold King, mining operations and guided hunting camps. This is a very busy section on a daily basis! The impact on our operations will become very expensive to us and to customers of the commercial folks.

Is there a document that explains what the impact to us would be if this passes?

Cathy Teich

I0178

6-29-12

To Whom It May Concern:

RE: Expansion of Joint Pacific Alaska Range Complex
(Fox 3 expansion, the new Paxon MOA, the lowering of
the MOA to 500 feet AGL)

After learning at the public meeting at the Swiss Alaska Inn on May 22, 2012 that you were interested in very specific comments, I would like to add some things to the letter that I submitted that night.

The area that would be affected by the changes if JPARC is expanded would be very specific...it would be THE ENTIRE AREA of Fox 3 MOA because caribou, moose, bear, smaller mammals, waterfowl, migratory birds inhabit the entire area. Caribou are migratory, which means that they move around. They move around through the entire area.

There are countless air taxi operators in the area where this is proposed. Military aircraft flying at 500 feet above ground level would endanger these pilots, their aircrafts, and their passengers. The speed at which military aircraft fly would be a lethal combination with slow flying Super Cubs, 185's, Beavers, and Otters. The November 16, 2010 F-22 Raptor crash is an example of things gone wrong. With more low flying high speed aircraft in the area with slow flying aircraft, the odds are even greater for accidents.

In addition to this hazard, this same region is a major hunting, camping, berry picking, and recreational area. It is a huge area for wildlife, especially being a caribou migration/calving area and a moose calving area. Migratory birds (such as Trumpeter swans) pass through the area and have their nesting grounds here. I cannot imagine the damage to waterfowl with jets going over at 500 feet AGL. It would be devastating. Most of the hunters from Mat-Su, Anchorage and Fairbanks use this area to hunt moose and caribou. This would completely disturb this traditional hunting area. Many people who hunt live a subsistence life style. This would infringe upon the rights of Alaskans. Peace, solitude, and quiet are things that Alaskans treasure. It is why we live here.

The following site reviews the results of studies that indicate that military aircraft have adverse affects on wildlife:

<http://www.nonoise.org/library/fctsheets/wildlife.htm>

I0178

The result of these studies indicated that the calving of wildlife with this type of noise pollution was adversely affected.

I am a speech/language pathologist and have taken audiology courses. Jets flying over at 500 feet AGL are **loud**...to the point of damaging hearing. The following link has a table of noise levels starting on page 2:

<http://www.musicmotion.com/content/mim/pdfs/noise%20and%20hearing.pdf> Page 3 indicates that noises of 80 dB or greater are potentially dangerous to hearing. Page 4 indicates that noise not only affects hearing, but other things:

- Increases blood pressure
- Has negative cardiovascular effects such as changing the way the heart beats
- Increases breathing rate
- Disturbs digestion
- Can cause an upset stomach or ulcer
- Can negatively impact a developing fetus, perhaps contributing to premature birth □
- Makes it difficult to sleep, even after the noise stops
- Intensifies the effects of factors like drugs, alcohol, aging and carbon monoxide

All mammals would be similarly affected. (see <http://www.nonoise.org/library/fctsheets/wildlife.htm>).

Before any changes could be made in the FOX MOA, you really need to have baseline data for the current populations of wildlife and their behaviors/patterns (feeding, calving, birthing, raising their young, nesting, migrating, watering, routines, etc.) in order to have data to compare after a change is made...although I don't think you should make any changes in the current FOX MOA. It should remain as it is. ADFG should be included in studies (funded by the military) in order to obtain accurate information about wildlife behavior/habitat.

Some friends of mine were hiking off of the Denali Highway this spring and experienced 2 triple sonic booms that made them hit the deck. This is not a pleasant experience when you are hiking in a "quiet" environment, enjoying solitude and wildlife. Recreation in the area of the FOX MOA is ongoing most of the year: fall: hunting and berry picking, photography; winter: snow machining in some areas and hunting (if season allows), caribou are scratching out food and trying to make it...they certainly don't need any more pressure; spring: snow machining in some areas, snowshoeing, skiing, and photography; summer: hiking, bird watching, biking, camping and photography.

According to: <http://www.cannon.af.mil/shared/media/document/AFD-110909-039.pdf> 3-12, the sound of an F16 at 500 ft. AGL at 500 KIAS is 102 dB (harmful to human hearing...wildlife have more sensitive hearing). A C-130 flying at 220 KIAS makes a sound at 95 dB (also harmful to human hearing...wildlife have more sensitive hearing).

According to: <http://www.globalsecurity.org/military/library/report/enviro/F22DraftEis/volume1/Mountai>

I0178

[n Home AFB/MH3.pdf](#) page MH3-15, F 22 flying at 500 feet AGL at an airspeed of 520 would generate 114 dB of sound. This, again is damaging to human (and wildlife) hearing. It is not natural and would interfere w/calving and the development of young wildlife and waterfowl/migratory birds.

I completely oppose the expansion of JPARC (Fox 3 expansion, the new Paxon MOA, the lowering of the MOA to 500 feet AGL). There should be No Action. It should be left as it is.

Sincerely,

Cathy Teich

COMMENTS ON DRAFT EIS FOR MODERNIZATION AND ENHANCEMENT OF JPARC

7/5/12

I AM FOR THE NO ACTION ALTERNATIVE.

I oppose all of the proposed expansion of, and creation of new Military Operation Areas, Training Areas, corridors, access roads, JAGIC and JPADS.

The vast existing areas are more than adequate for all training purposes. It has not been proven otherwise. The expansion would be a military take-over of huge amounts of our public lands and a hazard to private landowners. These Alaskan public lands provide dozens of uses for thousands of peoples' necessary activities including subsistence, commercial, and recreational uses. People do not want to be confronted with war games and "live fire" when hunting, fishing, trapping, camping, exploring, and all our other outdoor activities. Certainly 500 feet AGL supersonic flights daily are unacceptable and will have noise impacts outside the boundaries of the MOA's.

Problems with military exercises are as follows:

- Dumping of aircraft fuel in many flight situations
- Danger of live ammo and unexploded ordnance
- Unwanted new roads, heli-pads, and airstrips
- Litter, human waste, and aircraft chaff
- Extremely low flight altitudes

In addition, the military has a very poor track record with toxics and abandoned drums of used oil and contaminated fuel.

Much of the areas you want to take over are undeveloped or lightly developed country, and it should remain as such. This is essentially a large development project. It would negatively impact wildlife, fish, water quality, homes, cabins and lodges. The noise of these operations alone would be extremely disturbing to both humans and animals.

We do not need "more military infrastructure" or a "larger military industrial complex". The present enormous areas now open to the military, both on and off bases, are more than adequate for all training purposes.

Your draft EIS needs to consider the proposed Susitna Dam in its cumulative impacts.

Denis Ransy

Subject: JPARC

Concerning proposed airspace changes:

I am a VFR user of several of these areas and have the following GRAVE concerns for all general aviation users, as noted below by the Alaska Airmen's Association:

- **The proposed Fox 3 MOA additions** extend laterally and vertically in to an area of Alaska highly used by the general public for business and recreation, due to its close proximity to major population centers of the MatSu Valley, Anchorage and Fairbanks. Lowering the ceiling to 500ft increases the probability of mid-air collisions for commercial pilots conducting tour activities and general aviation pilots engaging in hunting, mining, recreation or other activities.
- **The low-altitude portion of the proposed Paxson MOA** includes a major VFR route connecting northern Alaska with the south central and eastern regions of the state. Other portions of this proposed MOA are used for mining and recreation. Confining VFR traffic to corridors through this area concentrates traffic, potentially creating an unsafe condition for civil aviation. This area is not conducive for a low altitude MOA.
- Under current FAA rules, **active MOAs block access by IFR aircraft**, other than emergency and lifeguard flights. This lack of access limits economic viability and reduces safety to pilots and the public in the communities that our underneath or near this airspace. Establishing MOAs that block IFR airways is directly counter to the work done by the FAA in recent years to increase IFR access with GPS approaches and airways. No new MOAs should be approved that block IFR airways until the FAA and military have developed procedures to allow IFR access to civil aircraft.
- **The military constructed the Battle Area Complex** south east of Delta Junction knowing that this area is important to civil aviation to access Isabel Pass. No restricted airspace should be established over this complex.
- **Restricted areas west of Delta** (2202 and 2211) already limit access between Delta, Fairbanks and the Richardson Highway corridor. We oppose alternatives that completely connect these existing restricted areas, and further block access for mining, hunting and recreation.

I am entirely in agreement with the above statement.

While I support our military and the need to conduct training to remain the world's unsurpassed air superiority force, this appears to be an excessive appropriation of airspace that is used by many, and I oppose it; this will severely curtail my enjoyment and rightful use of these areas.

Regards;

Mike Riddles

To Whom It May Concern,

I have been a full time resident of the Copper Basin since 1996.

I use the Paxon/Tangle Lakes area as a source of subsistence meat and for recreation. All your proposed usage expansions would negatively impact my and most all other users of this area and I am strongly opposed to any of your proposed expansions.

All your expansions would very likely have strong negatively impacts on the animals, people (Copper Valley residents and visitors) and businesses that depend on this area.

Per information in your presentation at the Caribou Hotel in Glennallen winter 2010, was the fact that, although you already have 65,000 square miles of every type of terrain Alaska has to offer to play in, in which you for some reason can't find precisely the conditions you want, you want to grab up to another 10-11,000 acres of our state with out relinquishing any of the areas you already have. Are you already fully utilizing all the areas you already have to train in? When will you have enough? I strongly object to this both as an american citizen and as an alaskan.

Also brought up at this same presentation: one of the principle benefits of any of the expansions is convenience and fuel savings, the expansion area being equidistant and between two air force bases. The aggressor team can fly from one base, the defender team from the other and meet in the middle, over our high quality subsistence hunting and recreating area. Your convenience is not a good enough reason to offset the harm you will do to me and so many of us.

The users your activities force out of the expansion areas will not go away, they will pile up in other already over-taxed areas in the valley. Many of us resident subsistence users are already having a hard time getting by. Any of your expansions will bring in even more competition for already tight hunting and fishing resources. My reality is, if I don't kill a moose, caribou or bear every year, I don't get to eat meat for the next year. I become an involuntary vegetarian with all the health ramifications that entails. End of story. A lot of us in this valley are in the same boat. Grocery stores are few and far between, cash is hard to come by and if we have to buy our meat, we have to do without something else.

You already have a staggering amount of very diverse terrain in which to very adequately do the training you want to do and it sounds like you are not coming anywhere close to using what you already have, yet you want a great deal more.

Your main real gain appears to be convenience, a little fuel savings and perhaps a brief respite from the boredom of training on grounds you have trained on before. The very real life cost to the animal and human residents and users of this area is way too great to be justified by your small gain of convenience and fuel savings. Please don't enact any of the proposed expansions.

Respectfully, Matt Obermiller

Re: Realistic Live Ordnance Delivery.(Blair Lakes and Donnelly Training Area)

My comments are pertaining to the State land in Proposal 2, Realistic Live Ordnance Delivery Area, proposed restricted area.

I do not support any restriction to access to State lands and or closing of State land to Alaskans to further training of our valued Armed Forces.

Alaska has very well written and interruption though the Alaskan Supreme Court a Constitution.

The Alaskan Constitution Article 8, the Natural Resource article grants Alaskans many protections and guarantees. Sections 1-4, and 13, 14, and 16 point out my concerns and you should be aware of them.

I also don't believe the EIS addressed the economical and recreational value of the possible 305,000 acres of State land that could have access restrictions levied on it.

This area is highly valued and used by many Alaskans to gather their wild food resources on annual bases. Even though the EIS made note of State or privet airstrips, it did not consider the many Super Cub type airstrips that are used.(these are not noted on any maps, but they exist) The same is true of many traditional hunt camps.

I did not see in the EIS the possible loss of income from all the guides that are registered to provide guided hunts for this area. With only a minimum of 2 week notice for exercises, how does one book guided hunts, and fulfill contracts with clients if they cannot be in the field? What about air transporters. How will the anticipated 90 to 150 days use by the military effect their businesses? The same could be asked of the miners.

Trapper is this area will also be economically affected. If trappers are restricted from being in the area the result could be loss of reasonable opportunity to harvest furbearers, loss of furbearers being in the trap to long, furbearers having to be in traps long than what is reasonably expected. Maintaining a trap line has social, moral and ethical components to it also.

Note: Trapping season is November – April.

Even though this is not a State designated Subsistence area (by definition) many Alaskans use it as such, they treat the wild food they gather as a necessity for life. The 305,000 acres and predicted 90 to 150 days of use by the military would have a great impact on those who rely on those resources. Moose in this area are managed under State intensive Management (IM) practices. This means "high levels of human harvest" restricting this area at any time during September-November would impact the IM plan.

I0183

Sheep, caribou, bears are not designated as IM, but many Alaskans do pursue them as a valuable wild food source and some consider them as somewhat of a trophy. The taking of sheep and caribou happens August through September. Black bears have a "no closed" season but the majority of the bears are harvested during the months of June and August and September. Grizzly bears are harvest in the months May and April, and the gain in September till they go into the den sometime mid to late October.

So it is very hard for me to see how Alaskan could co-exist with this current proposal on State land, and not impact us greatly.

To put in some sort of perspective Alaska only has control of 33% of land within the State. You the Federal Government have the rest.

NOTES: I find it somewhat odd that the U.S. Military's EIS on aircraft noise has little effect on game population and their movements. Also that aircraft noise does not affect the values of a person's wilderness experience. Yet the National Park Service, Bureau of Land Management, National Petroleum Reserve-Alaska, National Wildlife Refuge and the National Forest and Conservation Areas all say and have made policies or regulations or are in the process of doing so, to make restrictions on aircraft use with in their jurisdictions.

Who is correct about aircraft noise, and how it affects game and wilderness values? Is the State of Alaska and the JPARC EIS correct, or are all the other Federal Agency correct?

RECOMMENDATION:

Is to not allow any live ordnance release over State controlled land that would restrict access to those lands.

Thank you for allowing me comment.

RE: Comments on JPARC Modernization and Enhancement draft EIS

To Whom It May concern:

We are writing in support of the No Action Alternative. We are opposed to both the expansion of the Fox 3 MOA and lowering the altitude to 500 feet. This is the only alternative that would neither expand Fox 3 MOA nor allow training exercises below 5000 feet.

Though many of our concerns would apply to the Paxson MOA as well, we are less familiar with that area. Our family spends a great deal of time in the Matanuska-Susitna Borough where we have three cabins and therefore will focus our comments on the Fox 3 MOA. One of our cabins is south of Denali State Park and west of the Susitna River and is already impacted negatively by the MOA west of the Susitna even though it is not directly under it. The others are located in the southern part of the Talkeetnas, generally in the areas known as Chickaloon and Glacier View. Both of these would be negatively impacted by the expansion of Fox 3 MOA.

The reason for having and using these cabins is the opportunity they provide for experiencing Alaska's wilderness—the reason we live in Alaska. One of the most important qualities of that wilderness, increasingly rare in today's world, is natural sounds only. The continual roar of airplanes over Anchorage as I write is very disruptive and unpleasant—and makes the qualities of peace and quiet provided by our cabins all the more important. Among other things we value our cabins for the good night's sleep we get there.

Another concern is the impact on wildlife, also one of the important values of the Talkeetna Mountains. We know that ADF&G has already provided information to you regarding the negative impacts to wildlife from the noise of training flights, particularly those at low altitude. We also know that these training flights will sometimes break the sound barrier, impacting the health and well being of both humans and wildlife. One of our cabins is within the range of the Nelchina caribou herd. Being surrounded by caribou, having wolves answer our howls, watching Dall sheep traverse the mountain slopes or raptors soaring above us are among the highlights of our lives. These populations will likely be reduced or displaced by the disruptive noise impacts of military

I0184

training flights. We share the concerns of the Lake Louise residents/property owners who are not far from us.

Other concerns are restrictions on on-the-ground use and air space use by other aircraft. Getting out into Alaska's back country is a major component of many Alaskans lives. Either we already live there or we depend on being able to go there for recreation, hunting, fishing, hiking, mining, climbing, ORV trips, wildlife-viewing, camping, berry picking, connecting with the "real" Alaska, peace, silence, solitude. It's why we live here. Many of us use small planes to get to these places. For many of us, our windows of opportunity to do these things are restricted either by our own schedules or by the seasons. If you were to close some of these areas during someone's particular window of opportunity it may mean not using the area at all. This is a major and unacceptable infringement on our freedom to enjoy living in Alaska. The Talkeetnas have become Alaskans playground and should remain so.

In addition, smaller airlines offering scheduled service to small villages may face long and expensive detours. This will have negative economic impacts on their businesses. As well, there will be negative economic impacts on charter aircraft businesses.

One further comment: there is a rumor that this expansion of MOAs is related to the proposal to transfer F16s to Anchorage from the Fairbanks area. If true, the simple solution is to keep the F16s in the Fairbanks area and select the no action alternative in the JPARC draft EIS. Anchorage does not need or want those F16s here, appreciably adding to our already high urban noise level. Fairbanks does want them because of the jobs they provide there and their training areas are far enough away from urban centers that they are not a problem, as we understand it.

Thank you for the opportunity to comment.

Sincerely,
Helen and Gayle Nienhueser

Email: alcom.j08@elmendorf.af.mil

I am writing to comment on the P-JARC EIS. I support the No Action Alternative. I am very concerned that the plan vastly increases the area of training operations and that the plan will allow training as low as 500 ft. The expanded training area would greatly impact both the Lake Louise area and the Talkeetna area. Residents, businesses, and property owners in Lake Louise and in Talkeetna oppose the expansion. The increased noise, the increased impact on wildlife, and the increased danger to civilian flyers are significant factors that have not been adequately addressed.

I don't think the Military has done sufficient study and research to determine how to mitigate the impacts to wildlife, or, indeed, whether the impacts can be mitigated. Wildlife is important to residents who depend on caribou and moose for subsistence. Wildlife is important to tourism businesses and hunting guide businesses. Wildlife is important for maintaining ecosystems. Wildlife from large mammals to migratory birds would be impacted. What will be the impacts to wildlife from increased noise and how does the military plan to mitigate for them?

The 500 foot flying limit for F-22s and other military jet flights is unacceptable primarily for safety reasons and secondarily for increased noise. There are a lot of private pilots, flight-service companies, recreational users that access the area. Small planes fly at low altitudes and low speeds. Military jets fly at high speeds and belong at high altitudes. If military pilots need to train to fly jets at high speeds at low altitudes it needs to be done in places where there are no civilian planes in the air and no wildlife on the ground. Low altitude training in the proposed area is an accident waiting to happen, and the civilian public should not be put in such jeopardy.

The Mat-Su Borough is the fastest growing area of the state in terms of population increase. I am concerned that the Military is considering increases in restricted airspace without consideration of conflicts that might arise if the projected increases in population occur.

Thank you for this opportunity to comment.

Sincerely,

Ruth D. Wood

To: ALCOM J08 Admin Box
Subject: Joint Pacific Alaska Range Complex EIS

ALCOM Public Affairs
9480 Pease Avenue, Suite 120
JBER, AK 99506

Dear Sir or Madame,

I am a private pilot flying out of Lake Hood Strip in Alaska. Below are my comments regarding the Joint Pacific Alaska Range Complex EIS and how they will affect my flying and other GA pilots.

The proposed Fox 3 MOA additions extend laterally and vertically in to an area of Alaska highly used by the general public for business and recreation, due to its close proximity to major population centers of the MatSu Valley, Anchorage and Fairbanks. Lowering the ceiling to 500ft increases the probability of mid-air collisions for commercial pilots conducting tour activities and general aviation pilots engaging in hunting, mining, recreation or other activities.

The low-altitude portion of the proposed Paxson MOA includes a major VFR route connecting northern Alaska with the south central and eastern regions of the state. Other portions of this proposed MOA are used for mining and recreation. Confining VFR traffic to corridors through this area concentrates traffic, potentially creating an unsafe condition for civil aviation. This area is not conducive for a low altitude MOA.

Under current FAA rules, active MOAs block access by IFR aircraft, other than emergency and lifeguard flights. This lack of access limits economic viability and reduces safety to pilots and the public in the communities that our underneath or near this airspace. Establishing MOAs that block IFR airways is directly counter to the work done by the FAA in recent years to increase IFR access with GPS approaches and airways. No new MOAs should be approved that block IFR airways until the FAA and military have developed procedures to allow IFR access to civil aircraft.

The military constructed the Battle Area Complex south east of Delta Junction knowing that this area is important to civil aviation to access Isabel Pass. No restricted airspace should be established over this complex.

Restricted areas west of Delta (2202 and 2211) already limit access between Delta, Fairbanks and the Richardson Highway corridor. We oppose alternatives that completely connect these existing restricted areas, and further block access for mining, hunting and recreation.

Allowing Unmanned Aerial Vehicles (UAV's) to transit between Ft. Wainwright, Eielson and Ft. Greely and the restricted areas where they conduct training limits access, potentially creating a safety hazard for civil aircraft operating to and from Fairbanks, Delta and the Richardson Highway corridor. No segregated airspace should be established in these areas.

The recently proposed relocation of the F-16's from Eielson AFB to JBER appears to have a direct impact on the airspace and airports in Anchorage and the Mat Su Valley. This needs to be quantified and addressed as part of the cumulative impact of the Draft EIS.

Existing MOAs including Susitna, Stony, Naknek and Galena, are not addressed. They should be studied to see if they fit the purpose and need of the JPARC mission.

Please address the above concerns to ensure that general aviation safety is not compromised.

I0186

Very Truly Yours,

Peter Stokes, Private Pilot [REDACTED]

Dear Sir,

I am opposed to the addition of the Fox 3 MOA in South Central Alaska. I have flown in Alaska for thirty years as a recreational pilot. The proposed addition affects areas that I have used for recreation for my thirty years of flying. The proposal is unreasonable and burdensome to the general aviation users.

Please consider my comments.

John Murry

Comment(s):

I attended both the Scoping meeting and the Public Hearing for this JPARC-EIS. Both times I felt uneasy and even intimidated by the sheer number of uniformed individuals in the very small Swiss Alaska Inn in Talkeetna. The space was congested, even over-crowded, and I know of several people who did not attend because of the chosen venue. If the purpose is truly to HEAR from the public, the hearing should take place in a Public Space — a school, for instance. Even then, is it really necessary to bring so many military personnel?

I urge you to make No Changes to FOX 3. The only alternatives left in the draft EIS both allow overflights as low as 500 feet AGL. This is simply unacceptable. The minimum level for overflights should remain at 5000' AGL. Low-flying aircraft are much louder, and at the speed they're flying, can come over a ridge and be upon hikers/fishermen/wildlife very suddenly with their ear-splitting noise. This is not anyone's idea of a pleasant wilderness experience.

Natural (ie. QUIET) soundscapes are increasingly rare, even in Alaska. There is an innate value to quietude, and we cannot, as a species, afford to lose it.

In Appendix K, Table K-1, Existing Mitigations, Ref ID 438, it states, "Raise the minimum altitude to 5000 feet AGL for FOX 1 & 2." This is to mitigate biological, recreation, land use & subsistence issues. It should be the same for FOX 3 — apply this same mitigation to FOX 3.

I understand that the No Action Alternative would require more distant travel for JBER trainees. But what about all the people from Anchorage & the Valley who are looking for "accessible wilderness" and who, if changed, were made to lower flights to 500' AGL, would have to drive much farther to arrive at suitable quiet destinations?

Use additional sheets as needed.

July 9
Please turn in this form at a public hearing or submit by June 7, 2012, to:

Thank you for your input.

see P. 2

I0189

P.2 Carolyn Sayre JPARC-EIS
Comments

In the big picture, the military may save some money, but the fuel would be spent — perhaps even more than was saved — by the public.

The Talkeetna Mountains are a gem of accessible wilderness. People love to recreate there.

Businesses in Talkeetna guide trips there; air services drop off/pick up clients.

The dangers imposed by military overflights down to 500' are too great.

Last but not least, think of the impacts on wildlife. No adequate study has been done on noise impacts to the health & well-being of wildlife in Fox 3. Please do not make any changes until studies have been done. Humans can label, make sense of, or rationalize the noise that bothers them. Not so for birds, animals, even fish. They will be impacted. If noise is a known stressor for humans, it follows that the same noise level will create stress for wildlife.

Thank you for your time. CS

N.3 GOVERNMENT RESPONSES TO COMMENTS

Table N-5. Government Responses to Comments

| Submittal ID | Comments | Responses |
|--------------|---|---|
| G0001-1 | I have begun review of the draft EIS for the JPARC Modernization and Enhancement. The comment and request for clarification was determined to require a response, ideally, before the borough proceeds with comments on the effects of the proposed alternatives. Many of the tables in Chapter 3 that include various information on the extent and effects of the Alternatives appear to fail to list the extent and effects of the Alternative E Fox 3 MOA as a standalone alternative. Many Chapter 3 tables list three Fox 3 proposal areas: 1 = Existing Fox 3 MOA 2 = Fox 3 MOA Alternative A and E 3= Fox 3 MOA Alternative A Review of Figure 2-1 and Figure 2-2 suggests that Fox 3 MOA Alternative A completely encompasses Fox 3 MOA Alternative E. These two figures lead one to believe that proposal area 2 is the same as proposal area 3. Please clarify how the reader can discern the extent and effects of Alternative E in Chapter 3. A reader could assume a typo in the footnotes and that the third proposal area is Alternative E. However, there are several tables that show the third proposal area to include items not included in proposal area 2. Therefore, it does not appear to be a simple typographic error. Respectfully, Emerson Krueger Planner CF: Warren Keogh, District 1 Assembly Member John Moosey, Manager Eileen Probasco, Acting Director, Planning and Land Use | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The Final EIS will be revised to remove the potential for misunderstanding or confusion discussed in the comment, regarding the Fox 3/Paxon MOA Addition proposal in Chapter 3, Affected Environment and Environmental Consequences. |
| G0002-1 | Lt. Gen Hoog, Please find attached the request to extend by 60 days the public comment period on the JARC draft EIS. The four mayors have strong concerns that the F-16 move has not been included in this document. Therefore our request is made to extend this comment period. | <p>Given the feedback provided during the public hearings and Draft EIS review process, the U.S. Army and U.S. Air Force, on behalf of ALCOM, extended the Draft EIS comment period from 70 days to 102 days. This extension took place on May 31, 2012. The comment period, originally scheduled to close on June 7, 2012, was extended to July 9, 2012. The proponents of the proposals considered the extension carefully in an effort to balance military training requirements with the importance of ensuring adequate time for citizens and organizations to thoroughly review the Draft EIS.</p> <p>The F-16 Aggressor Squadron proposed relocation from Eielson AFB to Joint Base Elmendorf-Richardson is not connected to the proposals for airspace adjustments contained in the JPARC Draft EIS. The airspace requirements described in the JPARC EIS are driven by the capabilities of Alaska-based F-22 fighters and the tactics they will face from adversaries. Realistic combat scenarios create a need for an extended airspace and lower altitude airspace to reflect the types of combat in which fifth generation F-22 fighters would be</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|--|
| | | <p>engaged. The F-22s have the capability to initiate combat at greater distances than fourth generation fighters, such as the F-16, so fourth generation fighters must apply diverse tactics which require airspace expansion in distance and altitude. The F-22s must train to combat all such threats regardless of where the aggressor aircraft are based.</p> <p>The location of the F-16 Aggressor Squadron within Alaska is not a connected action to the JPARC proposals. The majority of the JPARC proposals that involve Eielson AFB are Army proposals and ALCOM does not anticipate those being impacted by the proposed move of the F-16 aircraft. The details of the proposed F-16 relocation and training, including Major Flying Exercises such as RED FLAG Alaska, will be worked out in the coming months. An environmental analysis will be prepared to address the environmental consequences of the proposed F-16 relocation within Alaska.</p> |
| G0002-2 | The Mayors of Fairbanks North Star Borough (FNSB), City of Fairbanks and City of North Pole respectfully requests the extension of the comment period of the Joint Pacific Alaska Range Complex draft EIS comment period for an additional 60 days to allow for further comment and analysis based on recent proposals and basing decisions the USAF proposed for Alaskan installations in February of 2012. The Air Force, by this force restructuring action which is not considered in the current EIS draft of shifting the Eielson F-16s, associated military and civilian personnel and possible the Alaska Red Flag mission from Eielson to JBER has created undetermined impacts on Alaska air space and Alaska's population that are more than sufficient to warrant an extended period for analysis and comment by the local governments, businesses, organizations and individuals negatively affected by, as yet, unidentified impacts and Alaska's land, water and air space. | See Response G0002-1. |
| G0003-1 | 1. Caribou herd & other wildlife - impacts? | The effects of the proposed action on caribou herds and other wildlife are addressed and mitigations identified as applicable throughout the document for both definitive and programmatic actions. Sections 3.1.8.3 and 3.1.8.4 provide impact analysis and mitigations with regard to aircraft overflight and noise (Fox/Paxon MOAs). Sections 3.2.8.3 and 3.2.8.4 provide impact analysis and mitigation with respect to aircraft overflight of existing training areas and live ordnance delivery (RLOD). Sections 3.3.8.3 and 3.3.8.4 provide impact analysis and mitigation with respect to ground training activities (BAX and CACTF). Sections 3.4.8.3 and 3.4.8.4 provide impact analysis and mitigation with respect to combined air and ground training activities (DMTR). Sections 3.5.8.3 and 3.5.8.4 provide impact analysis and mitigation with respect to night joint training. Impact analyses and conceptual |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|---|
| | | <p>mitigation are provided at a more general level in the equivalent sections for the programmatic alternatives. Additionally, Appendix E provides for a review of research on noise effects, primarily from aircraft overflights, on wildlife species.</p> <p>The U.S. Air Force publishes a Handbook for pilots that specifies where sensitive areas are located and lists any flight restrictions applied to them. Waterfowl concentration and Dall sheep lambing areas are included in the flight restricted areas for pilot/aircraft safety and wildlife protection.</p> |
| G0003-2 | 2. Troop movement throughout area in future - will it happen & then what restrictions are in place? | Units will continue to transition through the Wasilla/Matanuska Valley en route to the Donnelly and Fort Wainwright Training Areas. All unit movements will comply with directives of the Alaska Department of Transportation and all Army regulations concerning unit movements along public transportation routes. The number of unit movements may increase as the training OPTEMPO adjusts from a war footing to an Army preparing to respond to National Command Authority directives. From time to time, the Army may utilize those areas for which it has agreements with the State to use lands currently withdrawn from public use. The Army will remain compliant with the Sykes Act to allow recreation on lands not being actively used to support military training events. |
| G0003-3 | 3. What changes to the current plan are expected within the next 30 years?
If you don't have a plan for the future - in light of the ever changing training needs & equipment - and potential OPFOR, why not? And supposing you do - then disclose the possible scenarios - | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The Army and Air Force have prepared plans for future training needs and facilities. Advance planning for the JPARC proposals currently in the JPARC EIS have been under way for a number of years. A master planning and requirements development process formally began in 2009, was completed with the preparation of the JPARC Master Plan in July 2011, and was approved by the Joint Range Strategic Working Group (JRSWG). The JRSWG manages and oversees range and airspace within the military commands in Alaska. The plan's purpose is to guide the development of JPARC for the next 30 years by coordinating the efforts of the Army and Air Force and championing joint training (including the Navy and other service components). The Master Plan was a precursor to the JPARC EIS and is a living document that will evolve with military requirements, changes in the baseline, and input from all stakeholders throughout the EIS process. Neither the Master Plan nor the EIS is structured to assess possible training or exercise scenarios. |
| G0004-1 | So I will be submitting written comments that would be much more extensive. I don't have those formulated at this time. I do want to state | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The Army and Air Force did everything feasible to try and |

|--------------|--|--|
| | though that I am disappointed that this public hearing is on a Saturday, has been scheduled here in Fairbanks, one of the major -- the second largest community in Alaska, that it was scheduled for Saturday. There are two sessions, I understand that, but Saturday night is not a good time to have a public hearing. So I'm hoping that if there are further public hearings held in this overall process that they are scheduled in Fairbanks. We have the best turnout and information dissemination on weekdays and I would ask that that please be put into any further scheduling. I don't think it's appropriate to have a -- as I said, a public hearing on this issue on Saturday noon, especially in the summer. | schedule the public hearings in a timely and equitable manner to meet the needs of the public. Please understand that public hearings had to be scheduled in 10 locations. To stay on schedule, public hearing venues had to be selected during the beginning of the tourist season and a number of venues in Fairbanks were unavailable during the week. |
| G0005-1 | <p>As Governor of the State of Alaska, I fully support the modernization and enhancement of the Joint Pacific Alaska Range Complex (JPARC). As the largest military training range in the United States, JPARC is critical to securing and defending our nation. In this heightened threat environment, it is vital that we make every effort to maximize the training opportunities for the brave men and women who serve in our Armed Forces.</p> <p>I take seriously my constitutional duty as Governor to ensure the safety and security of Alaska's citizens and communities. Our Administration will continue to support the military industrial complex in Alaska while doing everything in our power to protect Alaska's pristine environment. For this reason, I believe the JPARC Environmental Impact Statement is an important and welcomed process.</p> <p>I am confident that the State of Alaska and the United States Armed Forces will partner together in identifying a course of action that will allow for the expansion of military training capabilities, as well as the continued protection of our beautiful, natural environment.</p> | Thank you for your comment on the JPARC Draft EIS. Your comment has been duly noted. The Army and Air Force units based within the state of Alaska face an exceptional challenge to meet compelling and increasingly urgent needs borne out of fighting wars. In an era of persistent combat operations, the Army and Air Force must continue to generate new technologies, learn from battlefield experiences, update tactics, and train intensively to face a committed and agile enemy. Each of these challenges drives the purpose and the need for modernization and enhancements to the range and airspace infrastructure that replicate the modern battlefield for training and testing in Alaska. In preparing the Final Environmental Impact Statement, the Army and Air Force will make every effort to harmonize mission requirements and community needs to avoid user conflicts or mitigate conflicts to the maximum extent feasible. JPARC is a key attribute of Alaska's value to the military in the twenty-first century. The modernization and enhancement of JPARC provides the Army and Air Force a unique opportunity to conduct state-of-the-art training in diverse terrain and large airspace areas to meet the national security requirements of the United States in the twenty-first century. |
| G0006-1 | <p>One of the things I'd like the folks to address is the issue of the proposed floor for the Fox 3 MOA. Currently it's proposed to go to 500 feet AGL and in talking to a number of the air taxi operators, the pilots, for the record I am a commercial pilot with 17 years of bush flying experience here in Alaska. I'm very familiar with the Talkeetna mountains and essentially the rest of the Fox 3 MOA and do fly through it on a regular basis just in doing this job.</p> <p>The area that really gets the most general aviation traffic is the area sort of -- if you draw a line from about the Susitna River across to the Alphabet Hills and south that area seems to have the most -- the densest amount of general</p> | Thank you for your suggestions. A good portion of Alphabet Hills and those areas south noted in the comment are located within the proposed Paxon MOA airspace where flight activities below 14,000 feet MSL would only occur during major flying exercises (MFEs). The six annual MFEs are only permitted during specified months of the year, which does not include the September hunting season. The proposed Alternative E configuration, more limited use of the Paxon MOA lower altitudes, and those existing and proposed safety measures discussed in the FEIS Airspace Management and Flight Safety sections should help alleviate some of the concerns pilots have expressed over the airspace proposals. |

| G0007-1 | <p>And the city of Delta Junction wants to state that we made a memorandum of agreement with the Army in '06 and upon investigation it was essentially omitted from the full JPARC Draft EIS and as a result we feel the EIS is -- the Draft EIS is defective. There -- will there be an amended version of this before a final version -- of the EIS before a final version comes out is something that we're concerned about. Because we think, again, it should be available for public comments after we see -- after you've heard what people are concerned with. We will object JPARC -- to JPARC moving the Final EIS without this opportunity for review and comment. We note that JPARC was provided with a copy of the '06 MOA by -- at the scoping meetings and still failed to address it in the Draft EIS. Numerous commitments contained in the '06 MOA are violated by the proposed changes in the Donnelly training area and other portions of training ranges near Delta and Gulkana. A partial listing of the violations will be included in our written comments which will be coming. The failure to discuss these violations and the necessity for them makes the EIS incomplete and inaccurate. The proposed changes violate many of the concerns underlying the '06 MOA, including, but not limited to, danger from wildfire which is a big concern in this area, danger from flooding, public safety arising from increased levels of activities and increased noise in the area. The issues are more critical given the higher intensity levels of training, the broader types of training and greater expanded use of the training area. These issues are not addressed or inadequately addressed in the Draft EIS. When the city acquiesced to the inadequate use or ac -- Donnelly range expansion EIS in '06 it did so with the commitment by USARAK that training at the Caktif (ph) and Backs (ph) would be limited to those described in the supplemental EIS prepared by</p> | <p>Thank you for your comments on the JPARC Draft EIS. Your comments are duly noted.</p> <p>The proponent consulted with Delta Junction as a local government, specifically the Mayor of Delta Junction, Mary Leith-Dowling. Also, Air Force and Army leadership met with Delta Junction community leaders during both public scoping meetings (see Appendix A, Table A-2 in Volume 2 of the Draft EIS) and public hearing meetings. During scoping, the following attendees joined Air Force and Army leadership at the Delta Junction City Hall: Delta Junction Mayor Mary Leith-Dowling, Delta Junction City Administrator Mike Tvenge, and Delta Junction Mayor Pro Tem Pete Hallgren. During public hearings, Air Force and Army leadership met with Delta Junction City Administrator Mike Tvenge.</p> <p>The Draft EIS mentions the Memorandum of Agreement between USARAK and the city of Delta Junction on Page 3-206. However, additional language will be added to the Final EIS. The paragraph will be changed to read:</p> <p>"Delta Junction, directly north of Fort Greely at the junction of the Richardson and Alaska Highways, does not have a comprehensive plan for land use but has established municipal ordinances governing land use and subdivision layout and approvals. The City Planning Commission serves as both an advisory body (prepares plans) and enforcing body of city ordinances. The Commission approves all plat plans, variances, and conditional use requests. The "keyhole" area is essentially undeveloped and wooded, with one or two existing residences. There is an existing</p> |

|--------------|---|--|
| | <p>USARAK. The city pressed for those facilities to be located at the south end of the Donnelly training area. USARAK pressed for a location at the north end of the Donnelly training area immediately joining city limits. We did much of this based upon our own experience with fire only a little bit prior to that. The compromise described in the 2006 MOA is that the city would acquiesce to the closer, more dangerous location, but only with safeguards and with the Army's assurance that the training activities would be limited to those described in the supplemental Draft EIS. The JPARC Draft EIS fails to address that bargain or JPARC's reasons for violating the bargain. Which we searched it, there -- it was never mentioned once. These comments to the public hearing are not a complete list of our concerns. Complete written comments will be submitted to you by June 7th, 2012, but unless these issues are fully addressed in a supplemental Draft EIS it's more likely than not that the city will challenge the adequacy of the JPARC Draft EIS leaving aside any claim by the city for breach of the '06 MOA. And if we have any -- like I say, we really do expect to see again the Draft EIS so that -- you know, amended one so that we can indeed see if that is finally remembered that we did have a mem -- an MOA with everybody.</p> | <p>Memorandum of Agreement (USARAK-MOA-029), signed 16 May 2006, between USARAK and the City of Delta Junction. The agreement lays out specific operational actions and restrictions that apply to the use and management of the existing BAX and CACTF in DTA-East (USARAK 2006-3). Mitigations as outlined in the BAX and CACTF Final EIS (dated June 2006) and ROD (signed 19 July 2006) remain in effect and will not be superseded unless a better practice, enhanced, stringent mitigation is implemented as part of this EIS."</p> <p>Page 3-191 of the Draft EIS referenced Section 3.2.3.1, which discusses range safety and control, unexploded ordnance and munitions safety, public access control, and fire and emergency response.</p> <p>There are no plans to construct any structures. Should construction be needed in the future, the Army will conduct necessary environmental analyses. The BAX proposal does not have a hydrologic impact, since this action affects only airspace.</p> <p>The anticipated overall increase in munitions expenditures is expected to be minimal. The training days considered in the BAX proposal were based on full allocation outlined by the Standards in Training Commission (STRAC DA PAM 350-38). These are based on estimated utilization rates, and commanders are not required to use one facility to execute their annual ammunition allocation. The munitions referenced were analyzed in the overall area of concern during development of previous NEPA documents; those munitions are currently fired in the DTA.</p> <p>There is nothing in USARAK-MOA-029 to eliminate the Army's requirement to place special use airspace over the BAX and CACTF. The Army stated that should there be a requirement for expansion alteration on the BAX or CACTF, the Army would conduct the appropriate NEPA action and proceed accordingly. The JPARC EIS is the correct venue for the Army to move forward to adapt to emerging mission requirements.</p> <p>USARAK Regulation 95-1 and Army SOPs stipulate those safety practices that aircrews must follow when planning and conducting flight missions, including altitude restrictions for avoiding noise-sensitive areas, populated areas, livestock, dwellings, and other sensitive areas.</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|---|---|
| | | Time-averaged and peak noise levels reflecting baseline munitions training do not exceed 62 dB CDNL and 115 dB PK 15(met), respectively, in areas outside of range boundaries. Flying operations are not conducted at a frequency sufficient to result in time-averaged noise levels exceeding 65 dB DNL. |
| G0007-2 | The proposed changes violate many of the concerns underlying the '06 MOA, including, but not limited to, danger from wildfire which is a big concern in this area, danger from flooding, public safety arising from increased levels of activities and increased noise in the area. The issues are more critical given the higher intensity levels of training, the broader types of training and greater expanded use of the training area. | G0007-4 | The proposed changes violate many of the concerns underlying the '06 MOA, including, but not limited to, danger from wildfire which is a big concern in this area, danger from flooding, public safety arising from increased levels of activities and increased noise in the area. The issues are more critical given the higher intensity levels of training, the broader types of training and greater expanded use of the training area. These issues are not addressed or inadequately addressed in the Draft EIS. | <p>The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS.</p> <p>Prior to implementing any of the programmatic proposals considered in this EIS that could expand training (e.g., higher intensity levels of training, or</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|---|
| | | <p>broader types of training and expanded use of the training areas), proponents would undertake further evaluation and an appropriate level of NEPA analysis, permitting, and agency coordination.</p> <p>At a minimum, this proposal incorporates all of the provisions from the 2006 MOA.</p> |
| G0008-1 | <p>The Mayors of Fairbanks North Star Borough (FNSB), City of Fairbanks and City of North Pole respectfully requests the extension of the comment period of the Joint Pacific Alaska Range Complex draft EIS comment period for an additional 60 days to allow for further comment and analysis based on recent proposals and basing decisions the USAF proposed for Alaskan installations in February of 2012.</p> <p>The Air Force, by this force restructuring action which is not considered in the current EIS draft of shifting the Eielson F-16s, associated military and civilian personnel and possible the Alaska Red Flag mission from Eielson to JBER has created undetermined impacts on Alaska air space and Alaska's population that are more than sufficient to warrant an extended period for analysis and comment by the local governments, businesses, organizations and individuals negatively affected by, as yet, unidentified impacts and Alaska's land, water and air space.</p> | <p>Given the feedback provided during the public hearings and Draft EIS review process, the U.S. Army and U.S. Air Force, on behalf of ALCOM, extended the Draft EIS comment period from 70 days to 102 days. This extension took place on May 31, 2012. The comment period, originally scheduled to close on June 7, 2012, was extended to July 9, 2012. The proponents of the proposals considered the extension carefully in an effort to balance military training requirements with the importance of ensuring adequate time for citizens and organizations to thoroughly review the Draft EIS.</p> <p>The F-16 Aggressor Squadron proposed relocation from Eielson AFB to Joint Base Elmendorf-Richardson is not connected to the proposals for airspace adjustments contained in the JPARC Draft EIS. The airspace requirements described in the JPARC EIS are driven by the capabilities of Alaska-based F-22 fighters and the tactics they will face from adversaries. Realistic combat scenarios create a need for an extended airspace and lower altitude airspace to reflect the types of combat in which fifth generation F-22 fighters would be engaged. The F-22s have the capability to initiate combat at greater distances than fourth generation fighters, such as the F-16, so fourth generation fighters must apply diverse tactics which require airspace expansion in distance and altitude. The F-22s must train to combat all such threats regardless of where the aggressor aircraft are based.</p> <p>The location of the F-16 Aggressor Squadron within Alaska is not a connected action to the JPARC proposals. The majority of the JPARC proposals that involve Eielson AFB are Army proposals and ALCOM does not anticipate those being impacted by the proposed move of the F-16 aircraft. The details of the proposed F-16 relocation and training, including Major Flying Exercises such as RED FLAG Alaska, will be worked out in the coming months. An environmental analysis will be prepared to address the environmental consequences of the proposed F-16 relocation within Alaska.</p> |
| G0009-1 | The TLO's scoping comments dated January 28, 2011, appear to have had no influence on development of the draft EIS. Because of this I am incorporating the TLO's previous objections by reference in this review to | The noise levels generated by UAVs at altitudes greater than the "floor" altitude of 1,200 feet above ground level would be similar to or less than that generated by common civilian aircraft that fly in the same areas, and noise |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|--|
| | the draft EIS. Our earlier objection to remotely piloted aircraft (RPA)/unmanned aerial vehicle (UAV) corridors identified over Trust land needs to be corrected and expanded. The lack of spatial references in the scoping documents resulted in an underestimation of the amount of Trust land that will be impacted by unmanned aerial vehicle overflights. The following table shows specifically the number of Trust parcels involved and the total acreage for each of the proposed corridors. Area Parcels Acres Eielson R-2205 12 1,034 Eielson R-2211 31 1,898 Ft. Wainwright R-2205 20 3,363 Ft. Wainwright R-2211 87 3,532 Total Acres 9,827 Establishment of these corridors with RPA/UAV overflights can be expected to diminish value of these Trust lands for residential and/or recreational development; although difficult to quantify, any reduction in land value from these plans is unacceptable. | impacts would be expected to be minimal. UAV corridors would be used for transit (i.e., not loitering) less than four times per day, two days per week. Although individual overflights might be noticed, overall time-averaged aircraft noise levels beneath the transit corridors would remain well below generally recognized thresholds for significant impacts, and no reduction in land value would be expected to result from the proposed overflight noise. The notes for Table 3-64 are revised in the Final EIS to clarify that State lands include TLO land. |
| G0009-2 | Establishment of these corridors with RPA/UAV overflights can be expected to diminish value of these Trust lands for residential and/or recreational development; although difficult to quantify, any reduction in land value from these plans is unacceptable. | Potential impacts to property values due to noise concerns associated with Unmanned Aerial Vehicles is addressed in Section 3.6.12.1. As stated in Section 3.6.12.3.1, "The noise levels generated under the proposed action are comparable to the noise levels generated by common civilian aircraft and are below the threshold in which adverse noise effects to human populations are expected. Thus, minimal impacts to the population from noise are anticipated under the proposed action. In addition, the complex nature of property valuation factors makes any estimation of the potential effects of noise on land values highly speculative. Other socioeconomic factors, such as business activity, employment, interest rates, land scarcity (or availability), and the nature of the local housing market are much more likely to affect property values than noise levels generated by UAV operations." |
| G0009-3 | The TLO continues to object to inclusion of live fire on the west and northwest boundaries of the Yukon Training Area. | Training and live fire exercises will not change greatly from what has been experienced in the past. The expansion of special use airspace does not currently include additional range construction projects. It does allow the military to expand training, safely, during limited visibility and ceiling conditions. It further allows the Army to incorporate all its assets in a training environment as it must once deployed into an active operational area. |
| G0009-4 | The TLO continues to object to inclusion of live fire on the west and northwest boundaries of the Yukon Training Area. | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. |
| G0009-5 | The TLO continues to object to expansion of any use of the Yukon 1 MOA that could interfere with mineral development of the Trust Salcha Block of land. | Your objection is noted. The only proposal that overlaps with the Salcha Block lands under the Yukon 1 MOA is the Night Joint Training proposal. None of the proposed actions will affect surface or air access to mineral resources in the Salcha Block of land. |
| G0010-1 | As stated in the previous comment period the airspace starting at 500 AGL | The Final EIS will be modified to state that coordination will occur between |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|---|---|
| | throughout the MOA along with no restrictions on the scheduling of active use is unacceptable. This type of unrestricted activity is a serious hazard to wildland fire fighting and fire detection is flown in this area throughout the summer months. Simply raising the ceiling would create a safety buffer for all civilian aircraft and would allow Part 135 aircraft to operate legally within the airspace. | Air Force personnel and wildland fire fighting personnel regarding fire detection and response. |
| G0010-2 | As stated in the previous comment period the airspace starting at 500 AGL throughout the MOA along with no restrictions on the scheduling of active use is unacceptable. This type of unrestricted activity is a serious hazard to wildland fire fighting and fire detection is flown in this area throughout the summer months. Simply raising the ceiling would create a safety buffer for all civilian aircraft and would allow Part 135 aircraft to operate legally within the airspace. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0011-1 | On behalf of the Copper Basin Fish And Game Advisory Committee I am formally opposing the expansion of the Fox 3 MOA and more specifically the lowering of the floor of these areas from 5,000 feet to 500 feet for military operations with high speed aircraft. There are many reasons but the main reason we oppose this is for safety purposes for the countless flights that are flown for game counts, surveys, predator control, radio collar tracking of game, and for the thousands of hours of recreational flights for hunting, fishing and other outdoor activities. By mixing high speed jets with slow and hard to see private aircraft in the same airspace, we feel safety would be severely compromised and it would be unacceptable. There are thousands of hours flown each year by hundreds of folks in these areas, and a mid-air collision would be inevitable at some point in time if these changes are made. | The flight safety concerns the Committee and other aviation interests have expressed over the airspace proposals were of utmost importance throughout the planning processes and are addressed in the associated FEIS resource area discussions. While existing advisory services and initiatives have been successful in maintaining a safe flying environment for all civil and military airspace uses, the FEIS notes how these may be expanded with additional mitigation measures considered, as necessary, to further ensure the safe and compatible use of this airspace. As a key stakeholder, the Committee is strongly encouraged to participate in the Alaska Civil-Military Aviation Council meetings and communicate with the 11th Air Force Airspace Management Office to discuss any concerns you may have now or in the future regarding military flight activities in the State of Alaska. |
| G0012-1 | A RESOLUTION BY THE DENALI BOROUGH ASSEMBLY SUPPORTING THE NO ACTION ALTERNATIVE CONCERNING THE JOINT PACIFIC ALASKA RANGE COMPLEX (JPARC)

WHEREAS, the Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Environmental Impact Statement proposes extending training, including live ordnance delivery, within the confines of the Denali Borough; and | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The Army and the Air Force share your concerns about Denali Borough and Alaskan resources. As explained in Sections 1.2 and 1.3 of the Draft EIS, the decision on which alternatives the Army and Air Force will pursue will be made in light of the Purpose and Need by Army and Air Force representatives following the review of all relevant facts, impact analyses, and comments received via the JPARC EIS public participation process. |

Table N-5. Government Response to Comments (*continued*)

|--------------|---|--|
| | <p>WHEREAS, the Denali Borough Assembly is the governing body of the Denali Borough; and</p> <p>WHEREAS, the areas in question are important to Denali Borough residents for a variety of uses including hunting, recreation, and access to private property; and</p> <p>WHEREAS restrictive and constraining uses of Denali Borough lands have been identified by the extension of the in-place bombing and military lands identified in the JPARC Environmental Impact Study.</p> <p>NOW THEREFORE BE IT RESOLVED: that the Denali Borough Assembly supports the “No Action” alternative concerning proposed realistic live ordnance delivery.</p> | |
| G0013-1 | <p>VIA ELECTRONIC MAIL: NO HARD COPY TO FOLLOW National Park Service Alaska Regional Office 240 W. 5th Avenue Anchorage, AK 99501
ALCOM Public Affairs 9480 Pease Avenue, Suite 120 JBER, AK 99506
The following comments are provided for the draft environmental impact statement (DEIS) for proposed U.S. Department of Defense military training for the Joint Pacific Alaska Range Complex (JPARC) in Alaska:</p> <p>While the JPARC does not include park areas directly, it is near the Wrangell-St. Elias National Park and Preserve (WRST). Impacts on subsistence in one area necessarily influence subsistence in nearby areas. For this reason, there is concern regarding the effects of training operations on subsistence users within Alaska Game Management Unit 13, especially along the Denali and Richardson Highways. The subsistence analysis for the expanded Fox 3 and new Paxon MOAs is incomplete in terms of the communities analyzed, the data upon which the analysis is based, and how the communities are classified with regard to their dependence on subsistence. Limiting the subsistence analysis to the eight communities within 20 nautical miles of the MOAs does not accurately represent patterns of resource use and distribution in the Nelchina Basin/Copper Basin area. Many communities beyond those addressed in the analysis rely on resources in the impacted areas and consequently will be negatively impacted by the proposed actions. Resources are spread across the local landscape, and local residents go to where the resources are. Sometimes that means driving substantial distances. Instead of the handful of communities included in the draft EIS, the analysis should be expanded to all those communities with a</p> | <p>The Air Force recognizes that there are many individuals and communities who rely on the subsistence resources under the proposed Fox 3 and Paxon MOAs. The Region of Influence for this proposed action focused on those communities directly beneath or within 20 nautical miles of the proposed airspace in order to provide the characteristics of those communities who depend on the affected subsistence resources and may have fewer opportunities to find alternative subsistence resources. The 20 nautical miles was used as a best estimate of a maximum distance traveled without the use of aircraft. Text in the EIS has been revised to clarify the purpose and origin of the Region of Influence. Text has also been added to note that while the communities listed in Table 3-24 depend on the affected subsistence resources, there are individuals from other communities who also harvest subsistence resources in the area who could be also be adversely affected by potential impacts.</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|---|
| | positive customary and traditional use determination (C&T) under the Federal Subsistence Program for moose, caribou or both on lands within the Fox and Paxon MOAs. Customary and traditional use determinations are based on an analysis of all available data regarding patterns of resource use and provide a more realistic basis for identifying impacted communities than the 20 nautical mile rule. | |
| G0013-2 | <p>. . . In what follows, the phrase “potentially affected rural communities” refers to the communities that have C&T for moose or caribou in the MOAs.</p> <p>Also, community harvest data that is over twenty years old is not adequate to evaluate impacts to contemporary subsistence livelihoods (To those familiar with this data, the “most representative year” referred to in the analysis is identifiable as the most recent year for which comprehensive subsistence survey data are available.). JPARC could follow the lead of the Alaska Gas Pipeline Project and base its analysis on updated comprehensive community subsistence data, providing funding to support updated surveys where needed. The Susitna-Watana Hydroelectric Project is similarly considering the need to conduct updated comprehensive subsistence surveys as part of its planning process. As a first step, the list of potentially affected rural communities (as discussed above) could be examined in terms of when the most recent comprehensive harvest survey took place and whether an update is scheduled in the next year or two. For those potentially affected rural communities that are five or more years out from the most recent update and not on the list for an update, funding could be provided to the Alaska Department of Fish and Game Subsistence Division or a similarly qualified independent organization to collect this information. A decision on the project should be delayed until up-to-date subsistence information for the potentially affected rural communities can be incorporated into the subsistence impact analysis.</p> | <p>Section 3.1.13.1 of the Draft EIS acknowledges the community harvest data by the Alaska Department of Fish and Game (ADFG) is dated; however, it is the best data available per Council of Environmental Quality (CEQ) Section 1502.22 at the time the EIS was being developed. Text has been added to the Final EIS to clarify the reason for the dated information but no updated data is available to incorporate into the Final EIS.</p> <p>The Air Force evaluated the Alaska Stand Alone Pipeline EIS for updated data as suggested in the comment. The Draft Pipeline EIS was released for review in January 2012 and the subsistence analysis also uses dated information for community harvests (see http://www.asapeis.com/joomla/index.php/draft-eis). The Air Force also reviewed information on the Susitna-Watana Hydroelectric Project for subsistence information. The Federal Energy Regulatory Commission is in the early stages of the environmental impact analysis process. Scoping was completed earlier this year and data collection, including possible updates to subsistence data, is underway. However, it is not anticipated that this data would be available for use by the Air Force in the Final EIS.</p> |
| G0013-3 | Finally, limiting the communities with high dependence on subsistence to only those with majority Alaska Native populations fails to recognize the importance of subsistence to other local residents. While it is appropriate for predominately Alaska Native communities to fall in the “high dependence” category, there are other rural communities in the area that should also be classified as such. Once up-to-date information is obtained regarding the harvest and use of subsistence resources (as described in the previous paragraph), this question should be revisited for all the potentially affected rural communities. Communities in which 80 percent or more of the households report using subsistence resources should be classified as high | An emphasis on Alaska Native culture was made in the impact analysis methodology because of the central role subsistence plays in that culture. Alaska Native communities are likely to have higher sensitivity to any impact due to reduced employment opportunities and increased economic importance of harvest, and considerations of the social/cultural effects due to potential disruption in subsistence. It is not meant to downplay the importance of subsistence to rural non-Native residents. Community ranking is used to determine the significance of any potential impacts. The subsistence analysis in the Final EIS has been updated to note that communities with more than 80 percent of the population participating in subsistence activities are ranked as |

| | <p>dependence regardless of the community's composition.</p> <p>Thank you for the opportunity to comment, and for extending the comment period.</p> <p>If you have questions, you may contact Barbara A. Cellarius, Ph.D., Cultural Anthropologist/Subsistence Specialist, Wrangell-St. Elias National Park and Preserve, [deleted for privacy].</p> | <p>having a high dependence on subsistence resources as suggested in the comment.</p> <p>See also response to comment G0013-2.</p> |
| G0014-1 | The following are the Alaska Department of Natural Resources' (DNR) comments and recommendations on the Definitive Action described in the EIS related to the Realistic Live Ordinance Delivery proposal. The first part of this response identifies issues related to clarity of the proposal and provides additional background information pertinent to the closure of state land. The second identifies proposed changes to the Realistic Live Ordinance Delivery option, and a final section focuses on those actions that may be required by the state to ensure public safety when live fire exercises are underway. These comments assume that either the Donnelly Training Area or the Blair Lakes Training Area are available and that the actual delivery of ordinance occurs within a limited area within each of these training areas. (1) It is also assumed that the military can or should be able to identify specific portions of the overall target area that may be affected at specific periods of the year. | <p>Thank you for taking part in the public and agency review process for the JPARC Draft EIS. Your comments will be duly noted and responses provided, as applicable.</p> |
| G0014-2 | Clarity of Proposal. Table 2-5 identifies Airspace Designation and the annual days of use. In the case of R-2202A, B, C and D the number of days of use is approximately 250. In the case of R-2211 it is 170. However, on page 2-12, line 27, use days are identified as 150 annually. The text needs to be clarified to explain why R-2211 cannot be used more frequently, and there needs to be discussion, if Alternative B is selected, on the distribution of use days between the two Training Areas. It would seem that a more even distribution would result if alternative training sites were available. | <p>The text will be clarified in the Final EIS to state the annual number of days for use in R-2211 is 170 days vice 150, as stated in Table 2-5. The days of use for R-2211 are correct as stated. As stated in DEIS Section 2.1.2.1.2, Alternative B, Lines 22-24, "The Blair Lakes Impact Area would provide for the use of inert ordnance only, given its current use by the Air Force, as well as its current configuration and hazard zone safety requirements." The Oklahoma Impact Area and the proposed inert targets (see Figure 2-4) in R-2202, on the other hand, will be used to a greater degree with the use of both live and inert ordnance.</p> |
| G0014-3 | There also needs to be some discussion as to whether there is the ability by the military to shift the sortie approach from one attack angle/area to another in order to avoid the public recreation and hunting. This is important since the public uses particular areas at specific times of the year, and the avoidance of these areas through the selection or specific attack vectors would mitigate impacts. | <p>The approach and release point for RLOD is only possible from the area between R2202 and R2211 due to the type of airspace required (restricted area). Due to land ownership near the other boundaries of the existing restricted areas, as well as existing routes for non-military aircraft, the expansion of R2202 is limited to the west side for the purpose of this proposal. Any further divisions to the proposed expansion areas (for individual activation) would result in airspaces too small to accomplish the</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|--|
| | | task. |
| G0014-4 | Based on discussions with JPARC personnel, the delivery of ordinance occupies a specific horizontal and vertical portion of the Drop Areas. For example, a delivery could use the area of R-2202A, as depicted in Figure 2-4. It would seem, then, that this horizontal and vertical airspace could be managed in such a way that during periods of the year when a sensitive public activity occurred near the impact zone, that the vector furthest away from this site could be selected for use at that time. | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The management of the airspace as discussed in the comment will be further analyzed and a determination made in the Final EIS. |
| G0014-5 | In general, then, the principal use of the ground evacuation area is related to moose hunting, but this hunting occurs during two periods, as noted above. The EIS identifies only the September period for moose hunting and it uses different dates than those actually associated with this hunting activity. Mitigation measures should therefore focus on this period of time. Moreover, this pattern is also likely to continue in the future; there are no additional state land disposals that are planned and the area lacks access and economically usable resources. | Revisions in the Final EIS include changes addressing concerns or additional information provided in this comment. The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-6 | Changes to Mitigation Measures. While the state is very much interested in providing a training area for the military that permits the continuation of the current forces in the Fairbanks area, this must be weighted against the impact of the Realistic Live Ordinance Delivery option upon the public and, specifically, their use of state land. Our interest is in minimizing that impact. We also believe that the use of both the Blair Lake and Donnelly impact areas is appropriate since this alternative (B) minimizes adverse effects to public activity on state land during high use periods, which tend to occur during the fall hunting season. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-7 | The number of actual days that the ground evacuation area is closed under the Definitive Actions needs to be clarified. The text on pg 2-12 line 27 states activities would be conducted 150 days annually, while the table 2-5 presented just prior indicates 250 days of annual use. | Please see response to comment G0014-2. |
| G0014-8 | Information provided by ALCOM planners indicates that no training activities will occur during Saturday and Sunday throughout the year. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|---|--|
| | Additionally, pg 6 line 29 indicates that no training activities will occur after 7:00 pm on Friday including Saturday and Sunday. In recognition of use patterns by hunters, the year round restriction on training activities on weekends should be extended to include Friday afternoon. People using the ground evacuation area often gear up, travel to the area, and start using these areas beginning in the early afternoon on Friday. It is therefore appropriate to accommodate this activity since it is directly related to the weekend use of this area. Openings on Fridays should be restricted to 0700 to 1400 hours. | actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-9 | The period when no training exercises will occur related to moose hunting season should be changed, to reflect the actual current pattern of use. Closure should occur from August 15 to September 15, November 15 to December 15, and January 15 to February 28. These dates may change over time and it is recommended that the military review the closure dates with the ADF&G at the beginning of the year (or another time that may be appropriate for the parties. The closure of the ground evacuation area between June 27 and July 11 is considered appropriate. | Revisions in the Final EIS include changes addressing concerns or additional information provided in this comment. The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-10 | Include alternatives and/or recommendations for the horizontal/vertical stratification of the attack vectors, to provide for diversity of approach and to minimize impacts on the public. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-11 | During the moose hunting periods, sorties should be directed to the Blair Training Area for inert ordinance and to the use of attack vectors that are more distant from Wood River. During the same period inert and live ordinance may use the Donnelly Training Area. Our preference is that the more northerly/easterly attack vectors be used during this period within this | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives |

|--------------|--|---|
| | area. | and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-12 | At other times of the year, operations are appropriate in either training area, although our preference is to use attack vectors that are to the north and east and that avoid the Wood River and Rex Trail areas in the Blair Lakes Impact Area and to use attack vectors with a similar orientation for the Oklahoma Impact Area, to avoid use areas to the west. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-13 | In addition to these measures it is recommended that the military publish, at the beginning of the calendar year, proposed closure areas and the dates associated with this use. This will allow the public to know in advance which areas are to be avoided, especially if it is ultimately determined that both military training areas are to be used and that specific attack vectors are to be used. This information should be displayed on maps that are easy for the public to understand. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0014-14 | The military should coordinate with local government and the Alaska Department of Natural Resources on an annual basis, or as needed, to provide information and maps that identify closures and public access restrictions. | The military intends to continue to coordinate with land and resource management agencies, airspace users, and airspace managers in order to plan military operations that minimize interference with tribal, public, and agency activities and peak user periods to the maximum extent possible without compromising the quality of training and safety. |
| G0014-15 | State to Prepare Regulations. As we have indicated in both discussion with military staff and in correspondence, since the military must have control over the surface at the times of ordinance delivery, the state will be obliged to develop a special use designation (SUD) for the impacted areas as well as implementing regulations. Without the use of these methods the federal | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|---|---|
| | <p>government will not be able to ensure control over this area and therefore meet federal requirements for the control of surface activities in areas that it does not own.</p> <p>From our perspective, the SUD and its regulations must be developed in such a way that maximum public use of the ground evacuation areas is retained while closing such areas for the minimum period of time necessary to conduct such operations. The SUD will have to identify areas and dates of closure and will have to indicate which activities are affected. (We presume that all public access to and uses within the ground evacuation areas may not be precluded.) To ensure that we meet the test of minimizing impacts to the public, the mitigation measures that are identified above must be given careful consideration and incorporated where feasible. We also recommend Alternative B as described on p. 2-16 as the preferable option. The regulations must reflect the access recommendations contained in the SUD.</p> | <p>and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS.</p> <p>The Air Force proponent will work closely throughout the SUD process to provide detailed information on locations and durations of closures and a proposed safety and access control plan.</p> |
| G0014-16 | I need to emphasize that DNR has also serious concerns with the proposed Military Operating Area (for aircraft) and specifically with the probable impacts of that proposal on public access, including both land access and aircraft movement. These concerns and the state's response to these issues are to be provided, however, by the Atlanta Department of Transportation and Public Facilities in separate correspondence. | Your concerns are noted. Please refer to responses to Alaska Department of Transportation and Public Facilities comments. |
| G0014-17 | I need to emphasize that DNR has also serious concerns with the proposed Military Operating Area (for aircraft) and specifically with the probable impacts of that proposal on public access, including both land access and aircraft movement. These concerns and the state's response to these issues are to be provided, however, by the Atlanta Department of Transportation and Public Facilities in separate correspondence. | The FEIS Airspace Management and Land Use discussions address those potential impacts relating to air and land access for the MOA and other proposals in Chapter 3 of the Draft EIS; and Appendix K notes those existing and proposed mitigations that would be pursued with government agencies and other stakeholders along with other viable options for minimizing these impacts. The Air Force and the Army proponents for the different proposed actions will meet with affected agencies through the appropriate forums to help find solutions to those issues and concerns that will support both military and agency needs. |
| G0014-18 | Should you wish to discuss this further or require clarification of issues that are identified here, please contact Bruce Phelps, Chief, Resource Assessment and Development Section at 269-8592 or bruce.phelps@alaska.gov . | Thank you for taking part in the public and agency review process for the JPARC Draft EIS. Your comments will be duly noted and responses provided, as applicable. |
| G0015-1 | The Department of the Interior has reviewed the March 2012 Joint Pacific Alaska Range Complex (JPARC) Modernization and Enhancement Draft Environmental Impact Statement (Draft EIS). The Draft EIS analyzes twelve military training improvement actions proposed on military range lands, maritime training areas, and airspace units of the U.S. Department of | Thank you for taking part in the public and agency review process for the JPARC Draft EIS. Your comments will be duly noted and responses provided, as applicable. |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|---|--|
| | <p>Defense (DoD) in Alaska.</p> <p>Our comments and recommendations are made in accordance with the National Environmental Policy Act, Endangered Species Act, Fish and Wildlife Coordination Act, Bald and Golden Eagle Protection Act, Migratory Bird Treaty Act, Wild and Scenic Rivers Act, and Federal Land Policy and Management Act. Our general comments are below; specific comments are provided in Attachment 1. We believe these comments need to be addressed in the Final EIS.</p> | |
| G0015-2 | <p>The short-tailed albatross (<i>Phoebastria albatrus</i>) is listed as endangered under the Endangered Species Act of 1973(16 U.S.C. 1531 et seq: 87 stat 884, as amended). Short-tailed albatross is a pelagic seabird whose range includes the Gulf of Alaska in the Temporary Maritime Activities Area during the months of April through October. In February 2010, the U.S. Navy (Navy) produced a Biological Evaluation (BE) for the Gulf of Alaska Navy Training Activities (referenced in Navy 2011). The BE assessed potential effects of Navy training activities on short-tailed albatross and described effective protective measures for the species. Information on potential effects of the proposed training activities and mitigation measures that will be used to avoid adverse impacts to short-tailed albatross in the Gulf of Alaska need to also be included in the Final EIS.</p> <p>The proposed programmatic action for “Missile Live Fire for AIM-9 and AIM-120” occurs in the summer range of the short-tailed albatross in the Gulf of Alaska. Therefore, the Final EIS needs to state that DoD will initiate consultation with the Fish and Wildlife Service (FWS) for short-tailed albatross, if the “Missile Live Fire for AIM-9 and AIM-120” action is developed into a “Definitive Action.”</p> | <p>As stated in the Impact Section 3.11.8.3, the Navy is already training with these weapons in this area, so the programmatic proposal would represent an increase in operations but not a completely new effect for this area. No new impacts to biological organisms are expected. In-depth discussions on all species effects from military activities in the Gulf of Alaska were provided in the Gulf of Alaska Navy Training Activities Final Environmental Impact Statement/ Overseas Environmental Impact Statement (Navy 2011). If the Missile Live-Fire for AIM-9 and AIM-120 proposal is developed into a ‘Definitive Action,’ Section 3.11.8.3.1 of the DEIS states, “because of the presence of endangered and threatened species in the project area, compliance with ESA Section 7 requirements are necessary including formal or informal consultation with NOAA Fisheries and USFWS.”</p> <p>The recommended text will be added to the FEIS, “DoD will initiate consultation with the Fish and Wildlife Service (FWS) for short-tailed albatross, if the Missile Live-Fire for AIM-9 and AIM-120 action is developed into a ‘Definitive Action.’ Appropriate coordination and consultation will be initiated with the National Marine Fisheries Service (NOAA Fisheries) to meet requirements of the Endangered Species Act and Marine Mammals Protection Act as they pertain to listed marine species and marine mammals in the Gulf of Alaska.”</p> |
| G0015-3 | <p>Migratory Birds and Bald and Golden Eagles</p> <p>As discussed below, existing data and additional information for eagles need to be presented and analyzed in the Final EIS. For example, the number of bald and golden eagles that inhabit the proposed Fox 3 and Paxson Military Operations Areas (MOAs) needs to be included and analyzed in the Final EIS. FWS maintains a geospatial database with historic eagle nest locations (see Attachment 2). These data, which represent nests easily observed from roads and highways, are available for public and agency use. It should be</p> | <p>A mitigation measure has been included for all the definitive proposals that may include ground disturbance: “Consult with USFWS with regard to compliance with Bald and Golden Eagle Protection Act and MBTA. As required, conduct bald and golden eagle nest surveys in proposed Fox 3 and Paxson MOAs over previously unsurveyed areas. Coordinate the results with USFWS.”</p> <p>Since the DEIS, we have obtained more mapping data for eagles and will incorporate relevant results.</p> |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|---|
| | noted that, although not a complete depiction of all eagles in the area, the map indicates records of approximately 1,074 bald and golden eagle nest sightings within the JPARC Region of Influence as described in the Draft EIS. The Final EIS also needs to more clearly identify the number of bald and golden eagles potentially at risk during nesting periods due to DoD activities along the definitive low-level flight paths. | |
| G0015-4 | The Final EIS also needs to analyze mitigation measures to help ensure all nesting and/or molting migratory birds are not adversely impacted by low-level flights. Scientific literature indicates human-caused disturbance can change behavior and spatial distribution of waterfowl (Manci et al. 1988, Dalhlgren and Korschgen 1992). Effects include interruption of feeding (Madsen 1985, Ward et al. 1994), displacement from feeding areas (Kramer et al. 1979, Belanger and Bedard 1989, Conomy et al. 1998), and increased energy expenditure resulting from escaping behaviors (Korschgen et al. 1985, Jensen 1990). If disturbances are sufficiently frequent, disturbance may result in reduction of energy reserves (White-Robinson 1982, Belanger and Bedard 1990, Miller et al. 1994) important for migration (Owen and Black 1989), molt (Taylor 1993, 1995), and survival (Haramis et al. 1986). The Draft EIS acknowledges significant bird migration routes in Interior Alaska and identifies high-density areas of nesting waterfowl that underlie the Expanded Fox 3 and Paxson MOAs; page 3-47 notes “Habitat used by ducks, geese and trumpeter swans is especially important under the southwestern part of the Fox 3 expansion area and the southern part of the proposed Paxson MOA, coinciding with the larger river systems and marshy areas.” The combined Fox 3 and Paxson MOAs cover more than 2 million acres of nationally-significant waterfowl nesting habitat. Most migratory bird nesting (and the associated post-nesting molt of adult birds) occurs in Interior Alaska between April 15 and August 1. Prohibiting low-level flights (i.e., flights below 1,600 feet) between April 15 and August 1 (USFWS(2) 2007) could help reduce or eliminate the potential impact to nesting and molting migratory birds. | <p>Mitigation measures, best management practices (BMPs), and standard operating procedures (SOPs) that currently exist are given in Appendix G, with the intention that their language will be adapted to apply to specific JPARC actions subsequent to internal review.</p> <p>Given the potential for loss or injury to aircrews and aircraft as a result of a bird-aircraft strike, extensive efforts are made by the military to avoid areas with high concentrations of birds, which are published in a handbook. Pilots are aware of and attempt to avoid migratory bird congregation areas for their own safety (e.g., to avoid bird strikes) as well as to minimize disturbance to the animals.</p> <p>Text will be added to include additional information from the literature to address nesting and molting migratory birds, including waterfowl.</p> |
| G0015-5 | Moreover, the Final EIS needs to provide and analyze information on the potential effects of aircraft overflights on nesting birds. While some studies have been conducted in Alaska on potential effects of aircraft on migratory birds; as noted below, the effects appear to differ widely among species of birds, and their potential habituation to aircraft disturbance. For example, Palmer et al. (2003) studied the effect of jet aircraft overflights on the parental care of peregrine falcons (<i>Falco peregrinus</i>) breeding along the | We will review the additional references and add text to the FEIS, Appendix E, which contains a review of research on effects, primarily from aircraft overflights, on wildlife species. |

|--------------|---|--|
| | <p>Tanana River in Alaska during 1995-1997. Military jets flying at or below 150 meters (about 500 feet) in the vicinity of specific nest cliffs within established Military Training Routes caused only subtle differences in peregrine parental behavior, no significant differences in nest attendance patterns, and no reduction in productivity of nesting pairs (Nordmeyer 1999). Ward et al. (1999) observed the behavioral response of fall-staging flocks of Pacific Brant (<i>Branta bernicla nigricans</i>) and Canada geese (<i>B. canadensis taverneri</i>) to a variety of aircraft and found 75 percent of brant flocks and 9 percent of Canada goose flocks flew in response to overflights, with an inverse relation between altitude and response and with the greatest response occurring at aircraft altitudes between 305 and 760 meters (1,000 to 2,500 feet). In that study, lateral distance was a more consistent predictor of response than altitude, with the greatest disturbance occurring when aircraft were within a lateral distance of 1.6 kilometer (about 1 mile) to the flock. Please refer to Attachment 3 for citations of studies we believe will help facilitate analysis of the potential impacts of aircraft overflights on nesting birds. The resulting analysis needs to be included in the Final EIS.</p> | |
| G0015-6 | <p>We are concerned the newly proposed low-altitude MOA, extending from 500 to 5,000 feet above ground level (AGL) in both the Fox 3 and Paxson MOAs, could result in significant adverse impacts to nesting migratory birds. The “Definitive Actions” in the Draft EIS are vague and do not provide specific actions to protect a given resource. For example, the Proposed Mitigation for the Fox 3 and Paxson MOAs (Table K-2 on page K-9), states: “Consult with the USFWS with regard to compliance with Bald and Golden Eagle Act and MBTA. As required, conduct bald and golden eagle surveys in proposed Fox 3 and Paxson MOAs over previously unsurveyed areas. Coordinate the results with USFWS.” The Final EIS needs to clarify and specify proposed mitigation measures for “Biological Resources,” including nesting migratory birds. The most commonly-recommended best management practice for protecting nesting swans, other waterbirds, and raptors (as well as other wildlife) in the vicinity of aircraft overflight is to maintain aircraft operating guidelines limiting helicopter and fixed-wing overflights to a minimum of 400-500 meters (approximately 1,300-1,600 feet AGL) with no circling over nests or aggregations (Komenda-Zehnder et al. 2003, and Churchill and Holland 2003). The National Bald Eagle Management Guidelines (USFWS 2007) recommend helicopters and fixed-winged aircraft avoid eagle nests by 1,000 feet during the breeding season, except where eagles have demonstrated tolerance for that activity. DoD needs to consult with the FWS prior to completing the Final EIS to</p> | <p>The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS.</p> <p>The Air Force will be consulting with the USFWS prior to completing the Final EIS to determine what specific protective mitigation will be included in the Final EIS and Record of Decision to protect nesting raptors and other migratory birds. Examples of typical measures in place appear in the 11th Air Force Airspace Handbook (2008) and include seasonal avoidance of waterfowl concentration areas.</p> |

|--------------|---|---|
| | determine what specific protective mitigation will need to be included in the Final EIS to protect nesting migratory birds. | |
| G0015-7 | We recommend that the footprint of the Fox 3 MOA, as described in Alternative E, be moved to the north by approximately 20 nautical miles to help reduce the negative effects on opportunities for solitude in the Lake Louise area. | Alternative E was created in response to public comments, in order to avoid impacts to the Lake Louise area. This comment is duly noted. |
| G0015-8 | We are concerned that the flight ceiling for both the FOX 3 and Paxson MOAs in both Alternatives A and E has been lowered from 5,000 feet AGL to 500 feet AGL. It should be noted that the Bureau of Land Management (BLM), through its recreation program, has documented over the years, numerous encounters by recreational users of BLM-managed lands with military overflights. These encounters have included low level overflights in the current Fox 3 MOA on the Upper Tangle Lakes and Delta River; some of these encounters included shockwaves and loud noise associated with aircraft breaking the sound barrier. We believe a lower flight ceiling in the Fox 3 MOA, combined with the same lower flight ceiling in the proposed new Paxson MOA, would likely reduce opportunities for solitude on many of the lands BLM manages. With recreational visitation to developed facilities and backcountry trails on BLM-managed lands in this area and on the Gulkana and Delta Wild and Scenic Rivers annually exceeding 150,000 visitors, the Final EIS needs to include avoidance areas and mitigation measures that will preserve opportunities for solitude on the nationally-designated Gulkana and Delta Wild and Scenic Rivers and associated developed facilities for the Fox 3 and Paxson MOAs in both Alternatives A and E. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0015-9 | We recommend that the Final EIS identify a mechanism (e.g., telephone number or web site) for providing the public and land managers at least annually, or more often as appropriate, information on flights and maneuvers. This mechanism should be structured so that it offers the opportunity for recreational users to provide feedback to DoD, such as reports of non-compliance and/or complaints. This could also be used by both DoD and BLM for tracking issues and documenting successful mitigation. | The JPARC proponents have carefully considered a variety of alternatives and several measures to reduce potential impacts from the definitive proposed actions evaluated in this EIS. Many of these are derived from recommendations and concerns expressed in tribal, agency, and public comments on the Draft EIS. The Final EIS identifies the preferred alternatives and includes details of all the final proposed mitigations. The Record of Decision will select alternatives and mitigations that proponents will implement as identified in the Final EIS. Some mitigations expand or adopt prior agreements and existing mitigations developed for previous NEPA actions by the Air Force and Army in Alaska, revised to address the particular impacts and locations of the proposals in this EIS. |
| G0015-10 | Under the proposed action #6, newly created “corridors” between Eielson Air Force Base (AFB) to R-2211; Eielson AFB to R-2205; Allen Airfield to | Many comments have been received regarding the potential for significant impacts the proposed UAV corridors may have on VFR and IFR aircraft |

Table N-5. Government Response to Comments (*continued*)

|--------------|--|---|
| | <p>R-2202; R-2202 to R2211; R2205 to R2202; Fort Wainwright to R-2211; and Fort Wainwright to R-2205 would, in essence, create a virtual “wall” extending nearly 90 air miles from Fairbanks and Fort Greely. This virtual “wall” would go from 1,200 AGL to 17,999 AGL. DoD has indicated that these corridors would be in operation from 07:00-19:00 Monday through Friday, or as extended by a Notice to Airmen. It is our understanding that the purpose of these corridors is to allow operation of Unmanned Aircraft Systems (UAS). According to the Draft EIS, if the Army meets all Federal Aviation Administration requirements for UAS use in the National Air Space, the Certificate of Authorization process, as it currently stands, would shut down the airspace in these proposed corridors. However, even if military Unmanned Aerial Vehicle aircraft were outfitted with Mode-C transponders, most of the BLM Alaska Fire Service (AFS) air fleet and contracted aircraft do not have Traffic Collision Avoidance avionics.</p> <p>A virtual “wall” of this magnitude, as described in the Draft EIS, would likely result in significant negative effects on the BLM AFS and Alaska Department of Natural Resources Division of Forestry (DOF) joint aviation operations for fire management by cutting off access to the east for AFS and DOF, and cutting off access for DOF to the west. Three of the five wildland fire air tanker bases located in Alaska are on either side of this virtual “wall” in addition to all of the helitack and smokejumper bases. Furthermore, 1,200 to 17,999 AGL cuts off all Visual Flight Rules (VFR) traffic heading in either direction. As a result, only pressurized aircraft (the majority of which are not part of the BLM air fleet or their contracted fire management aircraft) could make the east-west transition, since only pressurized aircraft are capable of flying at altitudes of 18,000 and above.</p> <p>We believe DoD needs to include in the Final EIS, an alternative approach to UAS use of air space and corridors that does not negatively impact AFS/DOF aviation operations for fire management, which are essential to helping protect life and property during wildland fires. In order to eliminate this virtual “wall,” we recommend DoD continue the practice of moving UAS between MOAs and other special use air space via ground transportation.</p> | <p>transit through the affected areas when these corridors are active. EIS Sections 3.6.1 and 3.6.3 address those concerns and note that the potential impacts on other airspace uses would be a key consideration in scheduling only those corridors/altitude layers required to support individual Unmanned Aerial Vehicle (UAV) mission needs. As noted in the EIS Section 2.1.6, the FAA, DoD, and other agencies continue to collaborate on those near , mid-, and long-term solutions for integrating UAV operations and supporting ground elements into the National Airspace System while ensuring they do not present any flight risks to other airspace users. Pending overall decisions on how this can be done and further evaluation by the FAA on the JPARC corridor proposals, it is imperative that the military proceed with identifying and evaluating those corridor options that would be required to support Army UAV missions. For that reason a Restricted Area designation was assessed for the proposal as the most restrictive option each may have on other airspace uses.</p> <p>Regarding your concern that the UAV proposal would create a virtual “wall” from 1,200 AGL to 17,999 MSL and result in significant negative effects on the BLM Alaska Fire Service (AFS) and Alaska Department of Natural Resources Division of Forestry (DOF) joint aviation operations for fire management by cutting off access to the east for AFS and DOF, and cutting off access for DOF to the west, please allow us to clarify the UAV proposal and demonstrate that access for fire safety will be available at all times. Corridors 8 nautical miles (NM) wide with proposed altitudes up to 17,999 feet MSL would be segmented into three altitude layers for use of only those altitudes required for specific UAV types/missions: 1,200 feet to 2,999 feet AGL, 3,000 feet AGL to 8,999 feet MSL, and 9,000 feet to 17,999 feet MSL. UAV operations could be conducted between 7:00 a.m. and 7:00 p.m., Monday-Friday with other times as stipulated by a Notice to Airmen (NOTAM). However, the Army intends only to activate the altitude layer(s) needed to support the individual UAV mission, turning off the restricted airspace once the UAV has transitioned through the corridor. These segmentations will allow AFS/DOF aviation operations for fire management, along with civilian pilots, to pass through at those altitudes not required for UAV missions. For example, if the 9,000 feet to 17,999 feet MSL segmentation is active, AFS/DOF, along with civilian pilots, can use the airspace in that area at any altitude below 8,999 feet MSL or above 18,000 feet MSL. If the 3,000 feet AGL to 8,999 feet MSL segmentation is active, ASF/DOF, along with civilian pilots, can use the airspace in that area at any</p> |

|--------------|---|--|
| | | altitude below 2,999 feet AGL or above 9,000 feet MSL. If the 1,200 feet to 2,999 feet AGL segmentation is active, ASF/DOF, along with civilian pilots, can use the airspace in that area at any altitude below 1,199 feet AGL or above 3,000 feet AGL. |
| G0015-11 | We appreciate the opportunity to comment on this document. For technical assistance or questions regarding threatened/endangered species or migratory birds (including bald and golden eagles), please contact Jewel Bennett at the Fairbanks FWS Field Office at 907-456-0324. For technical assistance or questions regarding BLM-managed lands, wildfire activities, or Wild and Scenic Rivers, please contact Serena Sweet at the Anchorage BLM State Office at 907-271-4543. | Thank you for taking part in the public and agency review process for the JPARC Draft EIS. Your comments will be duly noted and responses provided, as applicable. |
| G0015-12 | Page 1-36, Line 42, Section 1.6.4.3.1 Federal Agencies with Jurisdiction by Law, United States Fish and Wildlife Service: The jurisdictional responsibility of the FWS for administration of the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act needs to be added to this section. | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The information noted in the comment will be added as part of the Final EIS. |
| G0015-13 | Pages 2-6 and 2-7, Section 2.1.1.1. Alternative A: The Draft EIS states that the flight ceiling for routine training exercises in Alternative E for the Paxson MOA would be limited to 13,000 feet Mean Sea Level (MSL) and above (see page 2-7), while the flight ceiling for routine training exercises in Alternative A is 14,000 feet MSL and above (see page 2-6). The Final EIS needs to clarify why the flight ceiling is lower in Alternative E than Alternative A, given that Alternative E was designed to “provide a greater separation from the airways, jet routes, and airfields located south of the proposed airspace boundaries” (page 2-7). We believe the flight ceiling for routine training exercises in the Paxson MOA for Alternative E needs to at least match the flight ceiling for routine training exercises for the Paxson MOA in Alternative A at 14,000 feet MSL and above, and that this information needs to be included in the Final EIS. | Thank you for noting this error as this was discovered after the DEIS was published and has been corrected to reflect 14,000 feet MSL for both alternatives. |
| G0015-14 | Page 3-13, Line 13, Section 3.1.1.3.1 Alternative A: To ensure accuracy, the reference to “fire” needs to be changed here, and throughout the Final EIS, to “wildland fire.” | Thank you for your comment on the JPARC Draft EIS. This comment is duly noted. The word usage will be updated to reflect the appropriate terminology. |
| G0015-15 | Page 3-30, Lines 23-26, Section 3.1.3.3.1 Alternative A, Bird/Wildlife-Aircraft Strike Hazards: The Draft EIS does not specify the “consideration of additional means for monitoring...heightened risks of bird strikes” in the Fox 3 and Paxson MOAs zones. The Final EIS needs to specify “limits that would be placed on low-altitude flight activities.” The BLM-managed lands within these proposed MOA expansions provide habitat for populations of | Because bird/wildlife-aircraft strikes can present a serious hazard to all aircraft operations, the military will use the necessary means available as part of their BASH programs to detect and avoid those areas where there may be a potential flight safety risk. Additional details were included in the FEIS to reflect the information noted in the comment, as applicable. |

Table N-5. Government Response to Comments (*continued*)

| Submittal ID | Comments | Responses |
|--------------|--|--|
| | sensitive species (e.g., trumpeter swan and golden eagle) that may be adversely affected due to bird strikes caused by military aircraft between the 500 to 2,500 foot AGL. The Final EIS also needs to include information on what scientific means would be used to track migrations of birds, since “anecdotally observing lots of birds” is insufficient. As identified in Bruderer (1997) and Gauthreaux and Belser (2003), use of radar equipment can help in determining when large flights of birds are traveling north before and/or during Major Flying Exercise (MFEs) and regular training events. In addition, monitoring weather systems, especially wind speed and direction, can also help determine when to expect higher frequencies of migrations (Gauthreaux and Belser 2003). | |
| G0015-16 | Page 3-31, Line 4, Section 3.1.3.3.1 Alternative A, Ground Safety: The phrase “wildlife fires” needs to be corrected in the Final EIS to read “wildland fire” and “wildfire management” needs to be corrected to read “wildland fire management.” | The text will be changed in the Final EIS to address the comment. |
| G0015-17 | Page 3-31, Line 6, Section 3.1.3.3.1 Alternative A, Ground Safety: The phrase “fire management” needs to be corrected in the Final EIS to read “wildland fire management.” | The text will be changed in the Final EIS to address the comment. |
